DESCRIBES FINDING OF SINGING MOUSE

Dr. Powers Says Curious Animal Sits On Haunches and Makes Noise Like Cricket

A singing mouse is the latest curious discovery in "animadom." Dr. Edwin B. Powers, who was professor in the department of zoology in Nebraska in the year 1922-23 describes the strange animal in the forthcoming number of the Journal of Mammalogy.

The animal was found, according to Dr. Powers by his friend, Dr. Morgan. The former had been troubled by a curious noise which though attributed to a leaky radiator valve, upon investigation, was found to be coming from a waste paper basket. When he shook the basket, a mouse ran out and Dr. Morgan gave chase.

When the mouse was not moving, it would sit on its haunches and sing, even under the excitement of the chase. Its singing was similar to the noise of a cricket but much more continuous. The mouse was injured in the capture and died the next day despite efforts to keep it alive for further investigation. A naturalist identified the musical mouse as the common variety of house mouse.
