## Detailed Relief Plan Of Campus Is Made

Under direction of Regent George N. Seymour and L. F. Seaton, operating superintendent, a detailed relief model of the future campus is being prepared for exhibition in the Administration Building. Of the present campus every single feature will be represented, as well as representations of all projects in mind for the next fifty years. The entire enlarged campus from Tenth to Sixteenth Streets and from R to Vine Streets will be shown in miniature. The scale will be one-thirty-second of an inch on the model to one foot on the ground, so that a tree thirty-two feet high actually will be one inch on the model. The southwest basement room of the building where formerly student elections have been held, will house the exhibit.

### Fine Specimens Added to Collection.

Fine specimens of fossil-flags from iris roots, found in Sheridan county and brought to the Museum by C. G. Sawyer of Rushville, have been added to the department's collection on display. Dr. F. H. Barbour, chairman of the department of geology and geography, will be aided by these specimens in a paper he is preparing on fossil-flags.

### Alexis Finishes Research in Portugal.

Dr. Joseph Alexis, professor of romance languages, who studied in Portugal this summer, reported interesting experiences there concerning the revolution. Dr. Alexis also went to

## Dean Engberg on Leave of Absence Engages in Zoological Research

Carl C. Engberg, former dean of men at the University of Nebraska, who is now in Olga, Washington, on a year's leave of absence, will return to the University next fall as a professor of mathematics. Prof. Engberg is engaged in zoological research to such extent as his health permits during his year of rest.

He has written the following letter to the Daily Nebraskan:

"Now that the time for the opening of school has come I am in a very divided state of mind. Sometimes, but not so often, I wish I were back again busy with everybody and everything. More often, like the horse who has been sent out to pasture, I kick up my heels in pleasure at the unexpected freedom and declare that it is going to take a mighty luscious ear of corn to catch me again. Perhaps it is inconsistent of one, who for so long has been in the role of slave driver, to enjoy idleness and freedom from care, but such is human nature.

"I am often asked, 'What do you do with your time out here on the island?' This is the least of my worries.

"When the tide is right I go beach combing, hoping to find something new, or to learn something more about the habits and life of the seashore's inhabitants. This is not merely interesting, but instructive as well. I have found, for instance, that the moon plays only a secondary part in causing the tides. The main force is the clams which suck up the water and then spit it out again. (I am glad that Roosevelt is not here to call me a 'nature fraud').

"When the sea is calm I go dredging with a little hand dredge Professor Sjogren of the M. E. department made for me. Sometimes I work a whole day for nothing, perhaps even unable to get the dredge to the bottom because of subsurface currents. Other days, again, the luck may be excellent.

"I took Dr. Wolcott one day to a place where fish might be found, gave him a line with a hooked lead fish, called a jigger, at one end, told him to let it down till it reached bot-

tom, some hundred feet or so, and then to begin jerking on the line as hard as he could. He thought I was putting up a practical joke until he began pulling in the fish. Not only did he get the biggest fish he ever caught, but at the same time and place he saw tens of thousands of the rare Aurelia, of which only one specimen had been found during the entire summer's operation of the Marine Station dredge. With a sigh of content he said, 'This is the end of a perfect day.'

"Fish, however, is not all we have to eat. This is a wonderful fruit country. The branches are one solid mass of fruit. The crop of small fruit of all sorts, cherries, plums, prunes, apples, pears, etc., was immense this year, and no market. We have all the fruit we want without money and without price.

"Wish I might have all the old friends here for a few days. It would be a treat never to be forgotten for we have on this island the highest the highest mountain in the Sound country and from which the view is the grandest to be found anywhere on earth. We have not only the finest food for the body, but the best of nature's beauty—the finest food for the soul.

"Before long the storms of the winter season will drive us away from the water and then will come the tug with a number of works which the library was so kind as to lend me. Between study; watching the sea in all its moods; roaming the woods, where the deer are so tame they will let you feed them, and an occasional day of fishing or 'bug hunting' in good weather, the year will come to an end all too soon. Then back to work again, for the doctor promises or threatens, which ever way you prefer it, to have me in good trim by that time.

"I sincerely hope this will be a pleasant year for the University and all the students, a year of earnest endeavor and devoid of all trouble. 'Kindly give my greetings to all the good friends.'

Sincerely yours,  
CARL C. ENGBERG.

Spain when he finished his research work in Portugal.

### Professor Vold Writes Article.

Professor Lauriz Vold of the College of Law is writing an article, "Contractual Relations and Anticipatory Breach," which will eventually be published in a book he is revising. It will also appear this fall in magazine form.

### Specimens of Lava Sent to Museum.

The museum recently received specimens of volcanic lava and pumice from the United States Hawaiian volcanic observatory. Included are small bits of pumice from ancient activity at Kilama, lava from Mauna Doa, and pumice from Mauna Loa fountain which is 600 feet high, and 7,000 feet above sea level.

**Peculiar Beetle in Museum.**  
Dr. F. C. Konyon of Elizabeth, D. C., presented the Museum with a rhinoceros beetle secured on his travels. The specimen has a peculiar horn over its nose. It is usually found in South America.

### Ground Near Coliseum to be Levelled

Several old houses and shacks near the new Coliseum are being torn down. The ground will be levelled off, and eventually made into a campus park.

**Y. W. C. A. Worker Writes Article.**  
An article by Vera Barger, '11, Y. W. C. A. worker in China, entitled "Recreation in China" appeared in the June issue of Playgrounds, a current magazine. This spring Miss Barger was appointed recreation director for all Y. W. C. A. work in China.

### Botany Assistant Goes to Michigan.

Leonard Bekvall, assistant in the department of botany, has accepted an assistantship in the department of

botany of the University of Michigan for this year. He will continue advanced work in botany.

### Bengston Carries on Field Work.

Prof. N. A. Bengston of the department of geology and geography, carried on field work in southern Nebraska following the close of the summer session. His entire vacation was spent in study on the Persian area of Nebraska—a problem to which several summers have already been devoted.

It's the "wise bird" that uses only the best pen

Pride of ownership is not the only thing that has made the Lifetime\* the outstanding student's pen. Real economy has been another factor. When the student buys this unfading writing instrument, made of enduring Radite of lustrous green, his expense ends with its first cost. There are no charges for repairs, no matter what happens. It is unreservedly guaranteed. Spot it by the dot—at better dealers everywhere.

Price, in green or black, \$3.75. Student's special, \$7.50. Pencil, \$4.25
