

### Dean Sealock Explains New Teacher's Life

#### 'Hard Knocks' Are Many But Salary Is High First Season

#### OPPORTUNITIES GREAT

Disciplinary problems, difficulties with parents, community life, and heavy teaching schedules are the most likely "hard knocks" a student will be apt to encounter the first year out of Teachers college, according to Dr. W. E. Sealock, dean of the college.

"Many of our teachers meet disciplinary problems in high schools and fail because they can not manage a class. In reality, this means that they do not know enough subject matter to teach," declared Doctor Sealock. "Then the parents of high school students often present serious problems because they take exception to the discipline employed."

#### Communities Differ

Doctor Sealock explained the manner in which community life might be a "hard knock" to a recent graduate by saying that the community might not be the type in which he would want to live and the social life would probably be very different from what he was accustomed.

"Heavy teaching schedules are the biggest disadvantage or 'hard knock' a student could encounter," declared Doctor Sealock. "High school teachers are required to teach two or three times as many subjects as University teachers. The subjects are easier, however, than University subjects. Teachers in European high schools are not required to teach as many hours as teachers in American schools."

#### Splendid Opportunities

With all of its "hard knocks," Dean Sealock thinks there are splendid opportunities for the man or woman upon graduating from Teachers college. There are more women than men in the teaching field but there is just as much chance for the men because of the principalships and superintendencies to be filled.

"The initial salary paid teachers is higher than that of any other profession," declared Doctor Sealock. "The usual salary upon which a teacher is started is \$1,350. I really think this is more than they deserve on the start. The highest salary a teacher may expect to receive after teaching eight or ten years in a small town is \$1,800."

"This is a good salary compared to that of other professions—say the medical or law profession. The average small town doctor or lawyer does not receive much more than the superintendent of schools, taking into consideration the amount of time spent by each in preparation. In the city, the superintendent of schools will draw from \$10,000 to \$12,000 a year which is not much less than the income of the expert city physician."

#### Progress Depends on Man

The height of progress in this field of work depends on the man, according to Dr. Sealock. A person of high class ability could aspire to the superintendency or principalship of a city school which would pay from \$8,000 to \$12,000 a year. Cities such as Grand Island and Hastings pay a salary of \$5,000 and more, according to the eTeachers college dean.

Doctor Sealock asserted that a person should like to teach and should have a desire to render service along that line in order to like the work in Teachers college. It is not necessary to take a pedagogical course in high school in order to be prepared for the Teachers college in University.

#### Explains Position

When asked what interested him in this type of work, Doctor Sealock answered that he just "fell into it." "I lived in a section of Ohio where there was nothing to do except work on a farm, clerk in a dry goods store, work in a railroad office, or join the army. My parents opposed the railroad office and would not think of letting me join the army. Neither farming nor clerking appealed to me so I taught a term in the rural school."

"I did not seriously consider teaching then, however, and later entered the University of Ohio to take a course in law. I grew interested in teaching while there and changed over to the profession when I lacked only one semester of law to complete my LL.B. degree. So, in choosing the teaching profession, I think I really took the 'lesser of two evils' as there was nothing else open. This is the reason nine out of every ten men in the teaching profession are teachers."

#### Approves Vocational Training

Doctor Sealock does not think a son should follow the profession his father picks out for him if he does not like it. Although he has seen cases where that has worked out very nicely, a son should neither follow his father's profession simply because his father engaged in that type of work, according to the dean, but if he likes the work and feels that he can render great service in that line he would be at an advantage to follow it.

#### It is not necessary for a young man or woman to know definitely what they want to take up when coming to the university," declared Doctor Sealock, "but they should find themselves in their first two years of work."

"In order to be successful in this field of work, a student should have a wholesome amount of good common sense and a sense of humor. He must be able to meet people well and to adjust himself to the community in which he happens to be located. He must have reasonably good scholarship and be willing and ready to cooperate with others. He must be fair, honest, and a hard worker with an ideal of real service as his goal," declared Doctor Sealock.

### OBSERVANCE OF MOTHERS' DAY RECALLS BEGINNINGS

(Continued from Page 1.) While there is no doubt that the observance of Mother's Day is a necessary attribute of Deity, it nevertheless voices an essential truth, that mothers, as the representatives of the fecundity of nature, sustain the closest relation to God as His chosen channel through which to manifest the highest forms of creative power.

"The fatherhood of God, the motherhood of nature, and the consequent brotherhood of man," is an expression giving motherhood almost coordinate rank with God, and harmonizes perfectly with Bulwer Lytton's well known expression, "Nature's loving proxy, the watchful mother." The "broxy" idea grows out of the fact that the mother's instincts, acting as they do independently of and prior to reason, and being superior to and disconnected with understanding, are in close and vital touch with the infinite source of all wisdom, and hence a substitute for God within the limitation of their foundation.

Michelet says, "It is the general rule, that all superior men inherit the elements of their superiority from their mothers." To this add the words of the immortal Lincoln, "All that I am, or hope to be, I owe to my angel mother," and the tribute of John Quincy Adams, "All that I am my mother made me." Such acknowledgments can be duplicated over and over again from the literature of all countries and all times. Thus Napoleon, "The future of the child is always the work of the mother," and again, "Let France have good mothers and she will have good sons."

#### Inspires Longfellow

Longfellow, drawing his inspiration from the contemplation of motherhood, says, "Even He that died for us upon the cross, in the last hour, in the unutterable agony of death, was mindful of His mother, as if to teach us that this holy love should be our last word of thought, the last point of earth from which the soul should take its flight to heaven."

#### Mothers Bless World

"How fortunate that God sends us 'little mothers,'" found the world alver in the tempests and the alver in the palaces and the mansions. They give all they have. They worry and they grieve, comfort and scold, shield and protect, and when they have nothing left to mother, they die. They are blessings taken for granted, accepted as righteous, and thought no more about.

#### With the carrying out of this congenial and sacred duty of Mother's day, comes the realization of the growing lack of tender consideration for absent mothers among worldly-minded, busy, grown-up children of the thoughtless neglect of home ties and of loving consideration, engendered by the whirl and pressure of modern life; of the lack of respect and deference to parents among children of the present generation; and the need of a reminder of the loving, unselfish mother, living or dead, and thus the "Mother's day" idea came into the churches and Sunday schools, and has been expanded to include an outward demonstration of the latent love and gratitude of mothers, by a gift, words of appreciation, an act of kindness, or a letter, on the part of everybody.

#### TWO RECORDS FALL IN HIGH TRACK MEET

(Continued from Page 1.) The Group II hurdle events, counting strong to clinch first place for their school. One-tenth of a point separated Friend and Nelson for second place, Coach Avar Manderly's boys winning the second award with 24 6-10 counters, Nelson having 24 1-2 points.

#### Group I was won by Trumbull, pentathlon winners in that class with 25 points, Comstock receiving the second award with 18 and Doniphan finishing third with 15. Dewitt placed fourth with 11 5-6 points.

#### Individual Champions

Individual event champions were Snow of McCook, who made the best time in the 100 and 200 yard dashes, Linus Carroll, of Cambridge, in the high and low hurdles, Asher, Scottsbluff in the half, Schultz of Atkinson in the quarter, Spangler of Plattsmouth in the mile, Gregory, of Lincoln in the pole vault, Gilmore of Comstock in the javelin and high jump, with Honke of Butte, Campbell of Kearney in shot put, Barnes of Gothenburg in the discus and the best time in the relay was made by Nelson high school with Zimmerman Seibert, Mercer and Roby passing the baton.

### Intramural Golf Tournament Gets Under Way With Novel Rules Used

When the last fair-weather golfer removes her last square foot of sod from the eighteenth hole of the municipal golf course, the intramural club swingers tournament will be over and many a man who takes his game seriously will heave a sigh of relief. Seriously though, there have been no holes-in-one reported. It is said that several hard-hit golfers have done a Steve Brody into Salt Creek when they compared their scores with those of some of the intramural champs.

On the whole this had been a quiet tournament, only two fatal concussions from golf balls being reported. Golfers occupying sand traps do not constitute a legal hazard, and one hospital case from an impromptu duel fought with drivers instead of the more usual swords, was reported. Due to congested conditions the rules committee was forced to issue a few new rules. They are as follows:

#### Plenty of Handicap

1. Baby carriages on the greens are not legal hazard and all balls landing on such shall be treated as if on land under repair and may be removed without penalty.

2. Golfers throwing a dazzling

of 10.5 seconds in the century and 22.4 seconds in the furlons. Linus Carroll of the famous Carroll twins of Cambridge, clipped the high barriers in 16.2 seconds, and sped to a first place in the low sticks in 26 seconds flat, to stamp himself as the leading hurdle performer in the state.

#### Schultz Takes 440

Schultz, Atkinson 440 yard leader, turned in a time of 51.9 seconds for the quarter while Spangler broke the tape in the mile with a time of 4:40.7. Gilmore's record throw of the javelin gave him the gold medal as did Asher's but the Comstock youth was not content and jumped into a tie for the best feat 9 inches as did Honke, Butte.

#### Barnes Gothenburg 1929 pentathlon winner, ran true to form in the discus, hurling the platter for the best mark. Campbell, Kearney high representative, was first in the Group IV shot put with the best heave of the day.

#### Roby Shines for Nelson

Besides the record breaking performances of Asher and Gilmore, the work of John Roby, Nelson sprinter, was outstanding. Roby made a total of 18 points for his team, winning the 100, 220 and the broad jump, besides running anchor for the winning relay combination.

Cambridge high school hurdlers ran an exhibition shuttle hurdle relay at the close of the meet against Coach Schulte's freshmen hurdlers. Covedale, Boyer, Leon Carroll and Linus Carroll performed for the Cambridge school while Panes, Carlson, Smutney and Petz ran the barriers for the freshmen.

College presidents may have their own opinions on prohibition and its evils, but they're not for publication.

### GREY ARRANGE FOR ROUND UP PROGRAMS

Theta Phi Alpha, house dance, June 1. Zeta Tau Alpha, banquet.

#### CHANCELLOR DISCUSSES CO-ED DORMITORIES

(Continued from Page 1.) 600 without the land, we shall have completed about half of the project for taking care of freshman girls.

We have explained to the legislature that one-fourth of the cost of the buildings should be provided in cash, in order that we may enjoy the lowest interest rates and the girls the lowest possible rentals. Expect More Later We may reasonably expect that there will be favorable action toward the appropriation of another \$100,000 at the next session of the legislature in order that the dormitory project for freshman girls may be completed.

The original request for dormitory buildings was \$200,000, it will be recalled, the plan at that time being to erect one building and then use the income to retire indebtedness to be incurred for other such buildings. The best judgment

seemed to favor borrowing money for a more ambitious plan, and be getting the work at once.

#### Plan Series of Buildings

It will be seen that the University has changed its plan of housing groups of girls in moderate-sized buildings, each a separate unit, isolated from other such buildings. Instead we are planning a series of buildings, all together and properly conducted, which will make a magnificent dormitory plan for years to come. All freshman girls not living with their parents and relatives in the city will thus spend their first year together.

#### In our first group of buildings to be finished in 1930 we shall probably house around 250 girls.

The first group will naturally involve expenditure for a student center for dining and recreation. The buildings to be added later will be primarily dormitory or sleeping units. The buildings to be erected in one group will take care of around 800 girls.

#### Consider Deferred Pledging

The question naturally arises as to when sororities will be pledged from pledging first-year students. That will not come at once, but I believe such organizations should be considering the matter and preparing for it. When our dormitory program is completed it is likely that all freshman girls will be living in such buildings. There was very great sentiment in our legislature in favor of dormitories. Probably few things the University has ever suggested have received such widespread approval.

Just where those dormitories will be located is a matter I am not ready to discuss. The tract must be large enough for a complete and attractive development of the dormitory plan. The buildings should be something more than mere dormitories; they should show evidence of careful and artistic planning.

Football and other athletic receipts are used to defray the cost

of tennis at the University of Wisconsin. This announcement also carried with it that the care of the university grounds and buildings would be assumed by the athletic department.

Reverting a tradition which has fallen off in the last ten years, the senior class of the Law School of the University of Michigan voted recently to abolish Class day in that school and to replace this day's activities with a banquet.
