It takes more than a degree to make an engineer

It's pretty hard to keep your mind on a study of fatigue-of-cable-sheath-alloys, when you are thinking of the joys of artistic creation. And why try? There is work aplenty in this world for engineers and artists, for doctors, lawyers, builders, salesmen. The difficulty is that the individual doesn't always connect up with his work. Too many college men never take the trouble really to analyze themselves. Self examination now with the aid of your faculty advisor may save years of groping later on. And at graduation it will help you off to a good start.
