

You can now dance every Friday evening to the music of Howie Christensen and his orchestra at the Pla-Mor party house. You'll like the crowd of University of Nebraska students who dance at Pla-Mor. Come on out tonight.

The most gala week end of the spring season is anticipated by those university students who have returned from their vacations. Two costume parties will be given, one the traditional Story Book ball of Alpha Tau Omega, to be held at the Cornhusker hotel Friday evening, and the other a Gold Rush party at which the members of Sigma Nu will entertain at their house Saturday night. Beta Theta Pi, Phi Delta Theta and Sigma Chi are the fraternities which have scheduled dances at their chapter houses for Saturday night, while among the sororities, Alpha Delta Theta is the only group which will entertain at a house dance.

TWO ELEPHANTS WHICH NEARLY COST ADAM BREEDE HIS LIFE WILL SOON BE MOUNTED IN ROOM IN MORRILL HALL.

(Continued from Page 1.) feet provided about three the inches of sole or callous.

As mounted, complete the small ler elephant will weigh about 1,000 pounds and the larger one about ,800 pounds, Mr. Roper estimates that the larger one in real life probably weighed four or five tons. The animals were shipped to Ne-brasks, after being prepared for

mounting, in three sections. Tusks and ears of each took a box, the head another, and the body proper the third box. The crate in which the body of the largest elephant was shipped weighed a ton as delivered at the museum. Removal of the animals and mounting of them and killed him with the second in place will probably take a shot.

couple of weeks. Breede Describes Kill.

Killing of the two eephants is graphically described by Adam Breede in his book, "Adventuring." He had spotted a herd of elephants

one night and went early the next morning to place himself in position. After making a detour to get to leeward of the animals, he says

he found himself in a dense thicket unable to see more than ten to fifteen feet in advance. "It was a trying and dangerous situation," he writes, "for I knew I was advancing upon a herd of the wildest and most ferocious animals

in that part of the country.

"Cautiously I made my way stopping at every snapping of a twig or the breaking of a branch. In truth, at times I stopped to catch my breath in fear that my loud breathing would warn the an-

"Bending low, and part of the phants, resulting in a more pergoing on hands and knees the dense thicket, I slowly time made my way forward, a yard or two, at a time.

"Just as I had gained an open space and was advancing upright, I heard the creaking, crackling and breaking of timber directly before me. Instantly halting, I got down on hands and knees and peered thru the thicket—there, within less than thirty yards was a bull elephant slowly advancing in my di-rection. It was but an instant that I besitated for I realized that he sensed me as soon as I saw him-

that meant his life or mine. "Drawing a quick bead between the eye and the ear, I fired! At the crack of the gun he fell to his knees with a groan and almost in-

stantly arose and attempted a charge. Again I fired! This time, the mountain of flesh fell to the ground dead within ten yards of

Concerted Charge.

happened there was a snorting and trumpeting of elephants to the left of me, to the right of me, and before me-the wild animals were charging from every direction.

"Standing alone in an open space without a tree near by of sufficient size for safety, and wild elephants trumpeting to right and to left, there was nothing for me to do but stand and shoot my way to safety.

Hemmed In. "I would have retreated but was hemmed in. A large bull elephant came charging at me from the right within fifteen yards. I fired, hit him in the head, turned him

"In the meantime, the retreating porters were almost sur-rounded by charging elephants but managed to extricate themselves, altho they had several narrow es-

capes. "When the smoke of battle had cleared away there lay two bull elephants, and within thirty yards of each other."

Skinning Becomes Problem. Task of skinning the elephants

then became the serious one if the hides were to be preserved. The skins must be removed rapidly and salted or they will spoll due to the intense heat.

"The way Breede and his men skinned those two elephants is nothing short of miraculous," Murray Roper believes. He points out that it took Carl Akeley, famous African big game hunter, twenty-four hours to skin the first ele-

fect appearing hide than usual and eliminating the need for seams at the center back. Turning the elephants over after skinning one side is the

greatest problem, due to the great weight. It took more than an hour of hard work by a band of natives to turn one of the elephants over, Breede tells in his book.

Roper Lauds Work. "The skinning was about the

best of any we have ever handled,' Roper says. "The trunk and nos-trils of the small elephant were cut the best of any of the five elephants we have mounted in the

last few years." Shortly after the death of Adam Breede, the hides of the elephants were removed from Hastings to go to New York for preparation by the taxidermist. The animals were first sculptured in clay, after taking measurements; then a manni-

kin, light weight but strong was 'Before I fully realized what had cast and then the hides which had been tanned, were fitted over the mannikin. High praise was paid by Mr. Roper to the work of James L. Clark in planning the designs for the elephants to make them an artistic unit as well as to insure permanence of their preparation

are handled.

Work of unpacking the great crates, shifting the animals into position for mounting began shorty after the animals arrived here. More than a dozen men will be

used at times as the great weights
