labor.

theater. Judging from the generous applause, Larado Taft's address, "My Dream Museum," held more than a polite interest for those attending.

Tuesday's convocation should be another conclusive demonstration to the university fathers that students and faculty will attend a good convocation program, as exemplified in Mr. Taft's address.

Aside from the apparent success of the program two factors detracted from the universal appeal convocations might have. In the first place the convocation was held in the Temple theater. It is reliably reported that over 300 students were turned away for lack of standing room. This was unfortunate but inevitable, for the university does not have a theater suitable for convocation programs, nor the type of address that Mr. Taft presented. The second factor that may have destroyed the incentive for greater participation was the failure to dismiss classes. We feel that this should be done. But not necessarily to encourage student participation, but to place a greater degree of emphasis on this valuable part of the university's extra curricular activity

Aside from these items, however, we feel that the convocation was well managed. Certainly the convocation committee should feel well repaid for its efforts. At least it should convince them that students will attend convocations such as this and Miss Bently's program held in the Collseum recently.

On the other hand, they must carefully avoid

THE DAILY NEBRASKAN

general public: That education exists to enable people to make more money.

When the depression hit, say the authors, university graduates could make no more money than persons who had never gone near a university. Therefore, in the public mind, university education had failed. The public did not besitate to bring that charge of failure against the university; and the university faculty members, because they had themselves come half to believe that education exists to teach people to make money, had no answer to that

So, say the writers, we are in that mess today. hanging around the campus because no satisfactory Both faculty and students, looking through com-

The way out, say Writers Lancaster and Stoke, is first for university instructors to re-sell themselves that education is a thing that affects the ulty has re-gained its own faith, then the task is to create among the students the point of view that education is concerned with how to live, enjoy, un-

down an executive position in business.

Specifically, the writer's suggestions are these: First, we must come to a clearer understanding of the goals of educational enterprise, and resist much more fiercely the influences which lead us astray. Secondly, we must revive our faith in our work by renewing our sense of its value. Thirdly, we must examine our university from curriculum to organization, and instead of tolerating what is not harmful, root out all that is not helpful."

Those things to be weeded out of the curriculum are those which have no relation to education conceived as a thing concerned with knowledge, understanding, and the quality of the mind. Now what, against such a definition as that, happens to

The first thought that one is bound to have, it seems, is that education, purely as such, and training for skill in practice are almost inseparable. Suppose that one should start to prune out of the Ag

"Where they shall go is a ques-

curriculum all courses or elements of courses that fit the students for actual competitive practice rather than simply increasing their understanding and appreciation. Where would one start? Professor Abbott's chemistry course would be a good starting point, for certainly no one ever got any training from it that he could get paid for putting into practice. But where to from there?

Courses in history of agriculture, even in history of dairy, engineering, bee keeping, or vocational agriculture, would be pretty largely education. They would impart to one very little of practical skill. But beyond that it would be almost impossible to go and still take courses that offered education only. For how could one possibly study the principles of dairying or crop gr wing or farm management to understand them without at the same time becoming better equipped to put them into practice than the person who had never learned to understand the principles? Of course there are tricks to all trades, and the student still has them to learn when he actually enters the trade. But my point is that it is impossible to separate pure education and practical skill, especially so in a subject which so mixes practice with theory as does agriculture.

How then could Ag college be changed to fit the wishes of Writers Lancaster and Stoke? There is only one way: Simply change the point of view. Let the attitude of both faculty and students swing away from commercial toward educational. Almost the entire curriculum is necessary regardless of the point of view.

But if students can be made to feel that they are coming to college for understanding, not for a good job. they will not be disappointed after college if they don't get that job. If students can be made to feel that they have a responsibility to the state by virtue of having been educated at state expense, they will cling less to the notion that the state should have a good job ready for them because it has prepared them for such a job.

The state pays for the student's education. How then can that student justify himself if he uses that education in competitive enterprise to take advantage of those who helped to pay for his education? Actually, he owes a debt to the state rather than having an excuse to exploit it to his own advantage. And if the Ag faculty should take the educational point of view rather than the commercial point of view sufficiently to impregnate the students with the idea that their education and training-inseparable, remember-are first to be put to the service of the state and second to be used for personal advancement, I fancy that Writers Lancaster and Stoke would be satisfied with the change.

overworking student interest in this activity. As such they should adopt a regular system of convocations, comparitively small in number, fixed in date, and of high calibre. In this way, we feel student and faculty appetite for convocations would not be destroyed. Indeed it should cultivate a certain amount of anticipation for regularly occurring convocations.

Will the Greeks Support Debate?

ACCORDING to a story in Tuesday's Nebraskan work has been started on the third annual interfraternity debate contest. Such a movement is a worthy cause for Nebraska fraternities to support. Indeed it would be a refreshing change from the usual menu of athletics and social endeavor.

Considerable comment has been raised, however, as to what the subject for this year's debate should be. Sponsors of the contest have indicated their willingness to submit subjects to interested students and let them select the one of greatest interest to the student body.

A topic of timely local interest would do much toward increasing a much needed interest in this activity. Previous to this year subjects discussed were: "Should we have compulsory military drill?" and "Should athletes be subsidized?" All of them have been somewhat remote from the average student's daily life, and unfortunately have limitless amounts of canned material that have nothing to do with this campus. As such, Greeks would be wise in selecting a subject of interest to the campus.

The debate being held this year, obviously, is the third one to be held on the Nebraska campus. It is sponsored by Delta Sigma Rho, debating fraternity. Winners are presented silver gavels.

Certainly the debates held among Greek houses should atimulate interest in debating. Whether it does this, is another question. If correctly managed, and a timely interesting question is supplied for the embryo debaters. it should create a much needed thought on controversial campus questions. This quality, in itself, more than justifies whatever support Greeks may contribute toward making this & success.

Close Ups

And Long Shots.

Correction: In yesterday's Nebraskan we stated that over 500 people braved the elements to hear the Glee club. We were wrong. Over 1,000 people attended, which makes it still more painful.

The University Players are presenting another fine show at the Temple theater this week, featuring Eimer Rice's "Counsellor-At-Law." For lack of a legitimate slage or home of the drama, the University Players fill this gap in local amusements very well.

Now that another prominent pacifist was in Lincoln recently we may expect the usual peace movement, which gets as far as a county set-up, and then dies out, peacefully and sublimely.

ummer, most American newspapers have consistently suppressed all mention of the guild's activities in their news columns. Nevertheless, the organization has mushroomed with surprising rapidity, and the Pulitzer statement may be taken as the first public acknowledgment of the place the guild is to hold in the future. All this may be traced directly to the fostering spirit of the NIRA; without that legal sanction, the opposition of publishers would have made such an organization impossible. Under the approval of the act, labor activities in other fields may be hoped to achieve a similar foot-

ground than they yet realize. Under the old order,

industry held the whip hand and labor took the

residual share; if the new deal means anything at

all, it means that a larger share of national wealth

and income will go to labor, and in the struggle be-

tween the two, any concessions that are made will

The Times.

THE interest and enrollment in the adult night school, the increasing patronage for the public library and many other factors are encouraging signs of the times.

Education is a continuous process, including bringing in new ideas, revaluing things, discarding mistaken ideas and accumulating valuable ideas and information.

We cannot rely on some old graduation certificate issued twenty years ago to keep us educated all our lives. There is no way to obtain an "eternal" education that will keep us in mental trim.

Adult education to teach us to think clearly and to understand an ever changing world is a vital matter just now. Our nation will not exist in its most ideal form unless its citizens are enlightened. Just a smattering of knowledge is a dangerous thing

Newspapers magazines, radio, movies, the library and other things can help. We cannot be good citizens unless we know the facts and face themliving by impulses and impressions and street talk will lead us into unfortunate circumstances.

"Educated mind is the guardian genius of democracy." The great Texan who said that did not mean by the term "educated mind" only a group of people who had been given a prescribed number of years' schooling, essential as that is. "Education" is an every day matter .- Temple News.

We Have Failed-What Now?

THE American University Fails, that illuminating

series of articles Political Scientists Lancaster and Stoke wrote recently for the Daily Nebraskan were written, so the editor's note ran, partly to provoke thought and discussion. What follows here is an attempt to look at some of the things the authors said in their specific relation to the college of agriculture.

The American university has failed, if I follow the authors correctly, chiefly because of the point of view university instructors have come to hold toward their own profession. They have assimi-lated so to speak the nonular point of view of the lated, so to speak, the popular point of view of the am convinced that not less than

"There is a limit to the capacity of the human stomach," said Prof Ise. "If we consume more bananas, spinach and other vegetables, we must cat less wheat. It is probable, too, that as society becomes more urbanized, and as people live in furnace heated homes, they have less need for heavy food. Even

farming is becoming a sedentary occupation. The world needs all of the farm

products that America can raise In fact, a considerable part of the world's population is hungry right now. I should estimate at least 10 million Germans are undernour ished; twice as many Russians; 40 million Japanese; 100 million Chi-

nese and a like number in India as well as 10 million American who are out of jobs and require adequate food.

"With so many hungry, it would em reasonable for the American people to be willing to trade their surplus for such goods as foreign countries could send us, but our tariff policies and the tariff pol-

icies of other countries make this increasingly difficult.

"Hence our policy under the AAA. It is a stupid thing, to be sure, to plow under cotton when so people lack clothing; many throw pork into the river when millions are hungry for meat; to let fertile fields grow up to weeds, but as long as we refuse to engage

freely in foreign trade we must somehow get our efficient export industries down to a domestic basis.

"Secretary Wallace does not like to see cotton plowed under. He recognizes as clearly as anyone that we cannot build the wealth of

a nation by destroying wealth. But he is faced by a condition, not a

OUR PHOTOGRAPH

It is a lasting remembrance of your college days! And the artistry of the photographer who takes the portrait is of great importance.

The Rinchart-Marsden studio, a newcomer to Lincoln, has won in a short time the reputation of Lincoln's most artistic photographers. Only skill, knowledge, and good equipment can produce a photograph that is true. And the Rinehart-Marsden studio has these three essentials. So think of Rinehart-Marsden when you think of good pictures. The terms are synonymous!
