Specifying teachers' and engineering colleges, he called for a readjustment of professional school standards. "Why should engineering colleges spend money turning out bond salesmen?" he asked.

Praises planning board.
Boucher was high in his praise of the Nebraska planning board for its activity in mapping out an intelligent system for establishing educational plans to fit the educational program.

"It is refreshing to come to a state where there is an intelligent planned educational program," he said, contrasting Nebraska with other states where the educational system had grown up like "Topsy, thru the log rolling methods of legislators."

He spoke of Ohio as an example, "with three state universities," which now have been increased to five.
