to work on their own individual problems. Participants may work individually or in small groups, with an expert staff available to advise them. Professor Sorenson is co-ordinator of the program.

Two new evening defense courses in "Chemical Concepts" and "Bomb Filling Inspection" will be offered by the engineering college to begin today.

The courses have been especially scheduled to meet the need for inspectors and supervisory employes in Nebraska bomb loading plants. They will run four weeks, the course in chemical concepts to be given from 7 to 9 p. m. on Monday, Wednesday and Friday, and the course in bomb filling inspection to be given from 7 to 10 p. m. on Tuesday and Thursday.

No university fees will be charged or credit given, but a certificate will be granted upon satisfactory completion of a course. Applicants for chemical concepts must be high school graduates with mathematics and physics in high school. A transcript of high school scholastic record must accompany each application. For bomb filling inspection, applicants must have had in addition one year of chemistry in high school or college. Persons interested in a course should apply immediately to Prof. W. L. DeBaufre, director of defense training, University of Nebraska.

A new feature this year will be a two weeks work conference of county superintendents beginning July 6. This has been planned for the convenience of this group of educators who ordinarily cannot leave their duties long enough to attend a regular summer session. The conference will take up mutual problems of the group and will be in charge of Prof. F. E. Sorenson.

New Building Creates Space For Research

The new foods and nutrition building on the ag campus, when completed, will be an aid to helping Nebraskans with their knowledge of foods and better health habits.

Standing just north of the home economics building, the structure will face east toward the mall which is one of the most attractive features of the campus. The building is of the Georgian style of architecture and will harmonize well with the appearance of the other buildings.

Three stories high and about 160 feet by 57 feet in size, the building will have eight large pilasters as one of its distinctive features. They will be of white limestone. A light colored brick to correspond with nearby buildings is the main material for the outside of the building, and the trim is in white limestone. The roof will be slate.

The main entrance will be on the east side. On the first floor

will be a student lounge, about 22 by 35 feet in size, and a private dining room where faculty, student and other groups may hold dinner meetings. Student dining clubs will make much use of a large dining room. There will be a soft drink fountain at one end of this dining room and adjoining will be a tea room.

The large kitchen for the student cafeteria will be on the west side of the building, with the service entrance on the west. Walk-in refrigerators, an enclosed garbage room, and an enclosed dishwashing room are features. The cafeteria service counter will be sep-

arated from the cafeteria dining room. The large dining room will be about 57 feet by 27 feet in size.

About one-half of the third floor will be devoted to research in foods and nutrition and advanced work for students in dietetics. There will be foods research and faculty laboratories, a service laboratory with an analytical laboratory adjoining, an experimental laboratory, and offices for research workers and a dietetics laboratory.

Coeds of the Macalester college Hyperion society have turned "shoe shine girls" in a drive for

funds to buy gifts for Macalester men in the armed forces.
