

**PRIDE OF THE CHEMICAL** engineering department is this recently completed fractionation column, which will be in operation the night of Engineer's Week Open House. The unit is about 24 feet high and built of copper and brass. It is used in the fractional distillation of petroleum products. The crude oil is placed in the reflux chamber and as it distills, the gasoline, kerosenes, fuel oils, organic solvents and oils are separated. It is very similar to the kind that large oil companies use, but it is built on a smaller scale. Ed Galloway, a Chem E, is on the platform.

### Ag, Barb Tassel Filings to Open

Filings for Ag-at-large and barb-at-large vacancies in Tassels will open Monday.

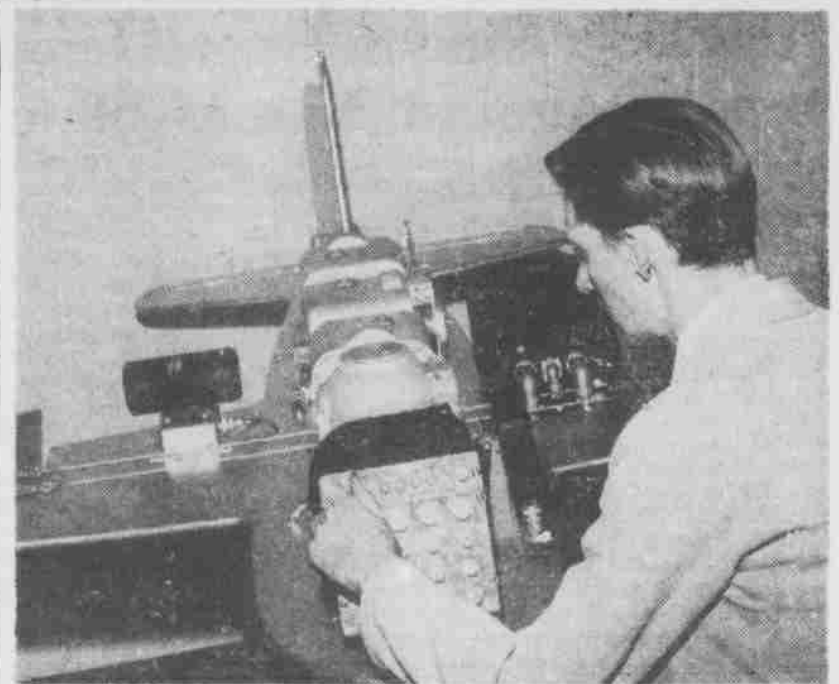

Applications may be made at the Union offices on both the Ag and city campuses. Filing will remain open until noon on Saturday, April 8.

Applicants must have sophomore standing next fall and must have weighted 5.5 averages.

The annual Tassel rush tea will be held Sunday, May 8.

exceeds the beauty of a span bridge across a deep canyon. To give the public better appreciation of these things, engineering students at Nebraska join ranks each year. In sharing their profession with all people, engineers have made E. Week a tradition on almost every campus where there is an engineering college or department.

At Nebraska it is, "Today's Dream—Tomorrow's Reality."

"PILOT TO CO-PILOT" will be the words in Bancroft hall when the operating switch is thrown on the model airplane built by the engineering mechanics department.

### Engineer's Week Operations Begin With Sale of E-Ribbons

By Kent Tiller.

This is it! Announcement of the ribbon sale for Engineer's Week yesterday officially opened the race against time.

Since far back in January, engine men have been laying the foundations of E. Week '49. Administrative work, paper work, and day dreaming have all lead to one point—today! From now until Open House on Thursday, April 28, the heat will be on.

Each year the famous last words, "We're going to start

early," ring through the meetings. True to form, however, the lights of the engineering buildings will burn late this week as men vow again to present the 'best Engineer's Week ever'.

Engineer's Week is not a symbol; it is not a game. From its beginning in 1894, engineers have felt they had a product to sell. They have been marketing that product each year since.

There is music in the whir of a motor, rhythm in the chug-chug of an engine. Art seldom
