

Variety Unlimited in NU College, School System

EVERYTHING from specialized training in dental surgery to agricultural teacher training . . . that's what Nebraska University is made of.

With its many colleges, schools and departments, the University has much offer the incoming student. If you have already decided upon a definite career, you will enter that college upon your admittance, to the University. However, if you are undecided, the University still offers you a well rounded program of education which will include certain requirements for graduation and others unspecialized courses, until you decide upon some career.

Guidance and counseling examinations will also be given to you to help you decide upon which field you will want to enter.

NEBRASKA'S college of agriculture is one of its largest colleges. This is due to the fact that Nebraska is an agricultural state. Ag campus, as it is called, is located three miles north of the main body of the University.

The College of Agriculture operates five experiment stations across the state. Each is engaged in research to benefit the farmers of Nebraska.

Men enrolled in the College of Agriculture may chose specialties from seven fields: General agriculture, agricultural teacher training, agricultural extension, technical science, conservation, agricultural journalism or agricultural economics.

Women may major in home economics and its various branches: Home economics teaching, home extension agencies, hos-

pital dietetics. They study clothing and textiles, foods and nutrition or housing and equipment. Some work toward degrees beyond the bachelor's degree and prepare themselves by specializing in pre-social service, home management, or family.

Every home economics major spends six weeks out of her last year in the two home management houses. While there they have full management of the homes and care for an infant from a local orphanage.

THE COLLEGE of Arts and Sciences on city campus offers a liberal education for those enrolled. That is, most students in that college are not in specialized fields, and receives training in English, history, political science, chemistry, mathematics, foreign language and other fields of learning. In effect, the College of Arts and Science is a kind of service school for the professional colleges and schools.

Students graduating from this school receive bachelor of arts degrees.

Some of the schools in that college include the school of journalism, and the school of fine arts. Other students specialize in fields of chemistry, psychology, geology, philosophy and others.

THE COLLEGE of Business Administration is not just another business college which trains typists and bookkeepers. It develops in students the ability to discover the facts relating to a business, to organize and arrange them, to analyze them according to scientific standards,

and then to form sound judgment.

It offers training in accounting, banking, finance, commercial law, economics, foreign trade and the diplomatic service, business administration, insurance, marketing, advertising and in many other fields.

Most bizad classes, as they are called, are held in Social Sciences hall.

THE COLLEGE of Dentistry is rated among the best in the United States. Its faculty and equipment have attracted students from all over the world.

Admission to the College of Dentistry is open only to students who have earned 60 semester hours in pre-dental training. Students are urged to map their pre-dental programs under the guidance of an adviser who is a member of the dental college faculty.

Because the facilities of the college are limited, it can admit only those who have maintained a superior academic record. Average or less than average work is not enough for this college.

THE COLLEGE of Engineering and Architecture offers courses in six branches of engineering: agricultural, architectural, chemical, civil, electrical and mechanical. Commercial engineering, which is a fifth-year course for students who wish to add business to their training in engineering, is also available.

This college does not train mechanics, electricians or radio technicians. Work in the College of Engineering and architecture leads to service in design, research, or management where structures, machines or processes are used.

Another college with a high enrollment is Teachers college. Here, prospective teachers receive classroom and actual teaching training. Sophomores, juniors and seniors in this college "practice teach" in Lincoln grade schools and high schools.

THE COLLEGE of Medicine is the only other college located off the main campus except Ag college. It is located in Omaha where medical and nursing students train in the University hospital.

This has just been a summary of a few of the many colleges and departments at the University. It is the aim of this institution to provide training for careers in the many fields that students wish to enter.

Equipment in the various colleges is as up to date as possible, and the teaching staff is one of the best in United States universities.

MOOT COURT—Law students annually pair off in teams to argue cases in Moot Court. The simulated court procedure provides valuable tests of the would-be lawyers as they compete with other student teams before a Lincoln judge.

Thomas Kilpatrick & Co
