

Health Institute:

NU Staff Members In Radiation Plan

Approximately 120 staff members come directly under the radiation protection program of the University of Nebraska, Tom Gable, University public health engineer, reported Wednesday.

Of these, 80 wear some type of monitoring device, such as a ring or badge which is examined every two weeks to determine the amount of radiation the wearer was exposed to.

Journal and Star Gable

Mr. Gable said that since the year-long program has been in effect "no serious over-exposures have been reported."

Mr. Gable spoke on "The Control of Radioisotopes on the Campus" at the concluding session of the two-day Radiological Health Institute at the University.

He said other facets of the program include: centralizing all pro-

curement of isotopes; review of all new installations involving radioactive material; and routine laboratory monitoring service.

He explained: "Since there are health hazards from the use of X-ray machines, radioisotopes and other sources of ionizing radiation, one might well ask why they are used."

"The answer is simple: They are sometimes cheaper, faster and far more accurate, and often make it possible to do things not possible in any other known way."

Stevenson Meeting Scheduled Tuesday

A meeting of Student Volunteers for Stevenson will be held Tuesday at 7:30 p.m. at the Democratic Headquarters, 1220 MSt., according to Duane Nelson, student chairman.

The group will be a non-partisan organization, Nelson said, to operate within the county organization of Volunteers for Stevenson.

Student Pepsier struggles with the old style paper flash card.

New Cardboard:

Card Section Procedure Easier On Students

By FRED DALY
Managing Editor

For the first time in years, University students sitting in the card section in the East Stadium are able to watch the half-time ceremonies.

The old colored paper "cards" have been replaced by bright new cards of heavy cardboard. Instead of having one card for each color, the new cards have a different color on each side.

Also, student card-bearers are told to hold their squares at eye level and a 45-degree level, thus enabling them to see what is going on down on the field.

Although this necessitates squinting into the sun, such activities as Band Day, the exchanging of the Buffalo and the Bell with Colorado and Missouri and the crowning of the various queens can be seen without punching a hole through a piece of paper.

Organized houses sitting in the card section have to be a little more careful this year, as they are required to pay a \$100 deposit on

their cards. This is to keep exuberant students from manufacturing confetti out of the half-time displays.

There are some drawbacks, however. The above-mentioned confetti will have to be smuggled in under coats as the present source of raw material is too dear.

As they are held at eye level, the new cards don't provide the protection from the sun the old ones did, and they can't be molded into funny hats or sun helmets.

They are also too stiff to be molded into paper gliders.

Well-drilled Corn Cob workers swoop down on the card section after the half-time ceremonies and snatch up their precious cards before anything catastrophic can happen.

Half-time, which in the olden times was a period of rest under the gently-flapping papers of the old system, has been streamlined, mechanized and painted up.

Now maybe students will have to watch the game.
