The University evacuation routes to be used in case of attack or other emergencies are shown in the above diagram. The Red Cross College Unit at the University is presenting a civil defense program to Nebraska students to be used in case of emergency. Students are being asked to memorize this diagram in order to prevent panic or confusion in the case of such an attack, according to Sondra Whalen, Red Cross publicity chairman.

Certificates of appreciation for service to University students and to the Union were presented to John Selleck, retiring Comptroller and Secretary of the Board of Regents, and Milton Anderson, 20-year alumni member of the Union Board of Managers.

Selleck's certificate was presented by Marilyn Heck, Union Activities Board president, and Anderson's was presented by Adam Breckenridge, Dean of Faculties.

Diane Knotek, retiring president of the Union Activities Board, handed over the gavel to the new president, Marilyn Heck, and Miss Knotek was presented a gift by the board.

Winner of the student Distinguished Service Award, Terry Mitchem, was presented by Bob Handy, Activities Director. Dave White received the Outstanding Worker award.

Gifts were also presented to Mrs. Dorothy Holyoke and James Porter, retiring members of the Board of Managers.

attack the United States today, one of the first precautions that would be taken would be the sounding of alert signals.

The alert signal, which means attack is probable, is a steady blast of three to five minutes' duration. The Take Cover Signal is a wailing tone, or a series of short blasts, of three minutes' duration. When you hear the Alert Signal, tune your radio to 640 or 1240, and follow civil defense directions given there promptly. All other stations will go off the air as well as all television stations and all FM stations. The Alert Signal will mean evacuation or mobilization of civil defense forces, depending on location.

The Take Cover Signal means that attack is imminent, and you must take the best available shelter immediately. Stay in this shelter until civil defense authorities tell you it is safe to come out.

When you hear the Alert Signal, do not use your telephone under any circumstances, as this will only clog the wires. Instructions will be broadcast over your Conelrad frequency following the Alert Signal.

Alert Signals are located at Northeast High School, Hartley School and Irving Jr. High in Lincoln.

If an attack should occur, when the all clear instructions are received from civil defense headquarters, throw out all unpackaged foods that were lying around where dust from ground bursts or mist from underwater bursts might have settled on them. And before opening canned or bottled goods, wash the outside of the containers

thoroughly. Scrub all cooking utensils and tableware to make sure any invisible radioactive dusts are removed. Food and utensils that were in closed drawers or tight cupboards will be all right.

Don't keep on using tap water for drinking purposes unless you have received official information that the city water system is safe. The dangers that can come from damaged water systems not only includes radioactivity but also typhoid and other diseases.

There are six basic steps that will lead the way to survival under atomic attack. First, try to get shielded. Get down in a basement or subway, if you have time. If you are caught outside, jump in any ditch or gutter, or flatten against the side of a building. Secondly, drop flat on the ground or floor to keep from being tossed about and to lessen the chances of being struck by falling and flying objects; thirdly, bury your face in your arms when you drop flat. This will protect your face from flash burns, prevent temporary blindness and keep flying objects out of your eyes.

The next thing to remember is to never rush outside after a bombing. Wait a few minutes and then go help to fight fires, after an air burst. After other kinds of bursts, wait at least 1 hour to give linger-

ing radiation some chance to die down. Fifth, don't take any chances with food or water that has been in open containers. And last, but not least, don't start rumors. Never lose your head.

When an alert sounds, doors and windows should be shut to keep out fire sparks. Shutters, venetian blinds, or heavy drapes will also provide some protection. Too, throw the electric switch that shuts off your oil burner to lessen the danger of fires and explosions. Don't ever take a match to light your way in a darkened room after an explosion. If gas or oil fumes should be present, an explosion may result. Instead keep a flashlight handy.

Remember, although atomic bombs hold more destruction than man has ever before had, not them nor hydrogen bombs will blow the earth apart or kill us all by radioactivity.
