

Arts And Science Offers Liberal Base

The College of Arts and Sciences offers a liberal education to the student who desires a deeper understanding of himself and his relationship to the art, literature, ethics and social life, science and cultures of other civilizations and his own. It provides the foundation for the graduate training for students who enter the professions. The third purpose of the College of Arts and Sciences is to provide educational experiences for students from other colleges in liberal arts and sciences and in specialized areas which they particularly need.

The courses in the College of Arts and Sciences are classified in five groups. In order to graduate from the College of Arts and Sciences, a student must meet the requirements in each of these five fields: humanities, mathematics or logic, social science, languages and natural science. During his first two years a student will have courses in English composition, in physical education or air, military, or naval science plus subjects to meet the requirements of the five groups. He takes elective subjects in the areas in which he may be interested in for possible majors and minors. The last two years a student specializes in two or three subjects to fulfill the requirements for a major and a minor. He also completes the group requirements.

Requirements

The requirements of a graduate for entering the College of Arts and Sciences are English, algebra, geometry, a foreign language and electives.

Students who are planning professional careers such as dentistry, forestry, medical technology, medicine, mortuary science, nursing, occupational therapy, physical therapy, veterinary science and X-ray technology take their pre-profes-

sional training in the College of Arts and Sciences. In all of these a student may take the liberal arts program that he wishes to have during the first year, but he must be sure to start the science courses that are required for his specialty.

Students who plan to graduate from the College of Arts and Sciences may take courses in other colleges; for example, in the College of Business Administration, in Agriculture, in Pharmacy and in Teachers College.

Grads in Many Jobs

Graduates of the College of Arts and Sciences may be found in the professions: law, medicine, teaching, scientific research, government service, dentistry, psychology, and social work. For these careers graduates of the College of Arts and Sciences usually take professional graduate work beyond the Bachelor's Degree. Graduates are also found in many areas of the nation's business and industry in varying capacities of management or specialization, such as mathematics of scientific work. They enter careers in journalism, music, art and dramatics. They may become recreation leaders or serve in other capacities in civil life.

Biz Ad Offers Good, Varied Opportunities

Wall Street aspirants have been able to receive collegiate training in their chosen field since the First World War.

These brief case bearers are now in great demand by employers since business has come to recognize the need for college trained people. In the past academic year over 50,000 degrees were granted in this field by recognized colleges and universities in the United States.

Employers are taking these graduates into their organizations with the expectation that after a period of training and experience these graduates will qualify for positions of greater and greater responsibility and eventually become full-fledged members of the management profession.

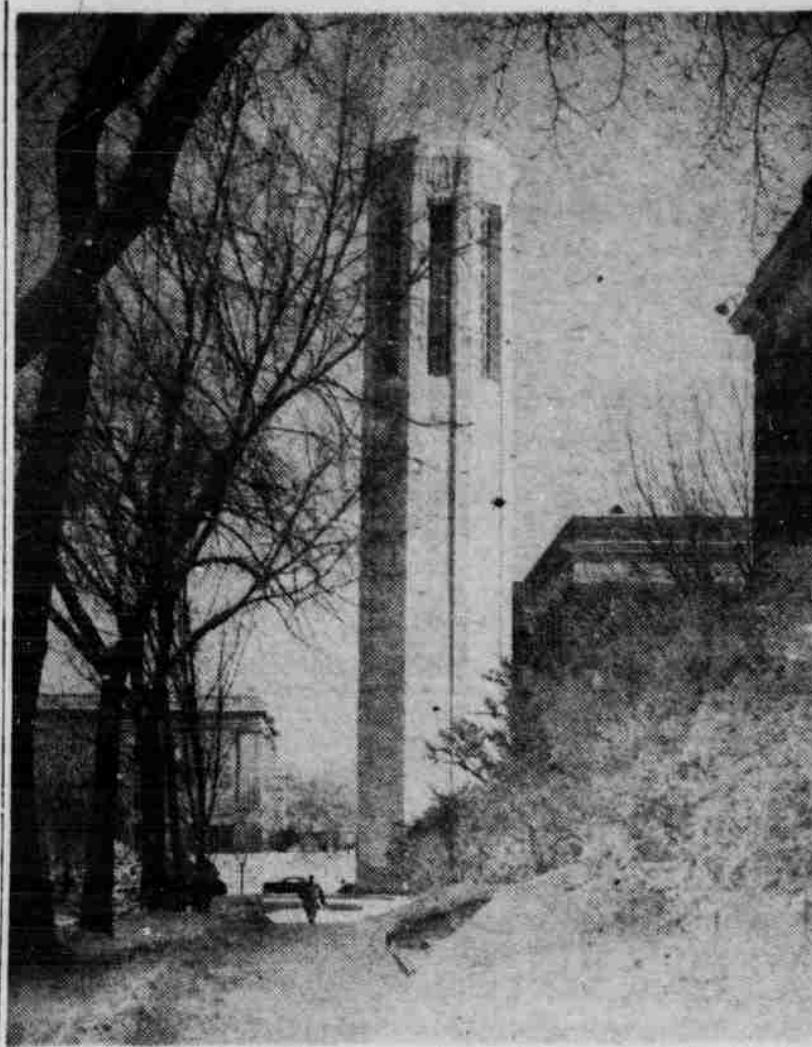

Each year more than a hundred large firms from all over the United States send representatives to Nebraska to interview graduates for the College of Business Administration.

Opportunities for biz ad majors exist in small firms as well as large ones, self-employment included.

Business offers a great variety of opportunities for college graduates as is indicated by the following diverse fields in which the University of Nebraska College of Business Administration offers instruction: accounting, advertising, banking and finance, business law, economic history, economics, industrial management insurance, investments, market research, personnel, public utilities, real estate, retailing, sales management, secretarial training, statistics, and transportation.

Women as well as men can find many opportunities in business. While secretarial positions provide the most common entree for women who enter the business field, numerous other interesting openings are available to them.

The degree granted by the College of Business Administration is the Bachelor of Science in Business Administration. The first two years of the four-year program leading to the degree are devoted largely to courses of a broad, cultural type, and the last two years to general and specialized courses in business and economics.

THE BELLS in the Carillon Tower ring each hour every day to dismiss class and to announce the next one.

College of Engineering Promotes E-Week Plan

Engineer's Week, a week in which the students set up demonstrations for the public showing all the latest inventions and accomplishments in the field of engineering, is one of the projects sponsored by the Engineering College. High school students and adults from all over Nebraska come to this demonstration to become acquainted with the achievements of modern engineering and the opportunities associated with it displays include features on modern electronics, television, and other late inventions.

Engineering College has three honoraries for its students. These are Sigma Tau, Pi Tau Sigma, and Eta Kappa Nu.

Sigma Tau is a national honorary engineering society that was founded at the University of Nebraska in 1904. Selection to membership is made from junior and senior students on the basis of

scholarship and other qualifications indicating future promise in the field.

The Pi chapter of Pi Tau Sigma was installed in Nebraska in 1938. This is a national honorary society whose membership is limited to junior and senior mechanical engineering students. Judged by faculty and fellow students, election to membership is based upon high scholastic standing and personality characteristics.

In 1949, Eta Kappa Nu installed its Beta Psi Chapter at the University of Nebraska. It is a national honorary open only to electrical engineering students, and membership is based on high scholastic standing and personal characteristics.

If one has no high school deficiencies and rates high in placement tests, he can earn a degree in Agricultural Engineering in eight semesters. Chemical Engineering will require an extra summer school session, and a degree in Architecture requires a ten-semester course.

However, if a student works more than ten or twelve hours per week, if he has high school deficiencies, or if he wishes to earn a commission in the armed forces, he usually plans to take an extra semester to complete his degree.

School of Nursing Has New Dorm

January marked the completion of the new nurses dormitory at the University of Nebraska School of Nursing in Omaha. The new dormitory, which includes recreational, classroom, and cafeteria facilities, replaces Conkling Hall, which was erected in 1923.

The girls at the Omaha School of Nursing participate in a four-year program. They learn basic fundamentals through classroom lectures and laboratory experiments before assuming ward duties. The last three years are spent in professional training at the University Hospital in Omaha. The students graduate with a Bachelor of Science degree.

The various jobs of the nurses include: assisting with surgery, supervising nurses, checking trays, and other dietetic work, working in the nursery, keeping patients contented and busy. The class instructors have double duties in that they serve as head nurses with the responsibility of assigning ward duties.

Although they have a tedious schedule, the student nurses find time for extracurricular activities, such as intramural sports and singing groups. In June, the nurses sent their director, Irma Kyle, to Rome, Italy, to attend the International Nurses' convention.

Learning To Be A Lawyer

The College of Law is one of the professional colleges at the University of Nebraska. In order to enter this college a student must have two years of college and pass an aptitude test of potential ability. Four years of law college is required for a degree if a student has taken only two or three years of prerequisite work.

A three year law course is taken by those who have completed four years of regular college work. Graduates of law college receive two degrees of bachelor of arts, one from the college where the prerequisite work was taken and one from law school.

The pre-law courses are usually taken in Business Administration College or the College of Arts and Sciences. Logic and accounting are essential before entering law school. Pre-law students should also include as much English composition as possible.

Other courses are taken in the fields the student wishes to enter. A careful selection should be made with the help of an advisor since there are many fields, ranging from insurance advisors to criminal lawyers.

Courses at the Nebraska Law School include the ancient principles of law and the very latest developments in the field. Actual experience can be obtained through moot court competition. During the last year in law school the students also give advice and prepare arguments and briefs free of charge for citizens of Lincoln, although cases must be turned over to practicing attorneys for the actual presentation. At meetings on the campus law students also serve as moderators and parliamentarians.

An honor society for law students is the Order of the Coif. Its membership is based on high scholarship and ethical standards. Those eligible are in the graduating class and are in the upper ten percent in scholarship. Members are chosen by the faculty.

Law Review is another of the school's activities designed to give the students actual experience and strengthen the contact between Nebraska lawyers and students. With the help of the editors and faculty each analysis is prepared by a student. The review is sent to different lawyers and gives the students a chance to establish themselves with the lawyers besides gaining experience.

The Nebraska College of Law is able to turn out qualified lawyers through these above programs and the close relationship between students and the faculty.

Classes Give Opportunities To Teachers

The aim and purpose of Teachers College is to offer prospective teachers and administrators the preparation and experience necessary for them to become effective educational workers, good citizens and happy individuals. For these reasons, the program offers a four-fold course of preparation.

1. To general education and basic training in English, history, science and social studies in order to gain a better understanding of the social and economic problems of a free society.

2. To secure a knowledge of human growth and development and an understanding of the physical, social, and mental characteristics of children.

3. To the learning of essential classroom and management principles, procedures, techniques, and skills.

4. To the art and skill of teaching gained through guided observation and actual teaching experience under expert supervision.

Scholastic ability and achievement are recognized by two honorary, professional organizations for teachers, Pi Lambda Theta for women and Phi Delta Kappa for men.

An accumulative average of 6.5 must be reached by a woman before she may become a member of Pi Lambda Theta. The purpose of the sorority is to provide better teachers and better devices for teaching.

Phi Delta Kappa is open to senior men of outstanding scholastic abilities and who are active in Teachers College. An accumulative average of seven must be attained before one may be eligible for membership.

NU Journalism School Fifth Oldest in Country

Created by the Board of Regents in 1923 the University of Nebraska School of Journalism was to serve as a means of co-ordinating University activities in journalism. Nebraska's school, now under the direction of Dr. William E. Hall, is the fifth oldest Journalism school in the nation in terms of continuous instruction. It now maintains programs leading to degrees in four colleges—Agriculture, Arts and Sciences, Business Administration and Teachers.

Intensive laboratory training, experience on campus publications, and professional internships prepare the journalism student for his career. Positions as newspaper editors, radio-television newscasters, agricultural information specialists or advertising directors are among the many job oppor-

tunities offered to the graduate.

A reception and the National High School Press Association convention are sponsored each fall by the school. Climaxing the week-end is the awarding of scholarship gold keys to five journalism sophomores.

Journalism at the University began in 1894 when the first class was held by William Owen Jones under the department of English. In 1917 following the work of Professor Miller Moore Fogg, who organized the Nebraska State High School Press Association, the University officially established the curriculum leading to the professional certificate with an A.B. degree.

In 1914 the first journalism professional fraternity, Sigma Delta Chi, was instituted and three years later its counterpart for women, Theta Sigma Chi, was established.
