

Bids Received For New Dorm Complex

Bids for a dormitory complex to be completed in the fall of 1967 have been received and will be decided upon at the Board of Regents meeting on Friday.

The three-dorm complex will be similar in design to Mari Sandoz Hall and will house approximately 1,500 students.

Apparent low bids, as of Tuesday were:

- General: Kingery Construction of Lincoln, \$3,446,000.
- Elevators: (oil, hydraulic and electrical): O'Keefe Elevator, of Omaha, \$204,000.
- Elevators (electrical): Westinghouse of Omaha, \$193,870.
- Electrical appliances: O. K. Electric of Lincoln, \$639,000.
- Mechanical: Rienhardt of Lincoln, \$982,730.
- Bedroom furniture: Alfred Bloom of Omaha, \$412,000.
- Combined mechanical, general and electrical: Olson Construction, of Denver, Colo., \$6,097,488.

No Lights At 16th & S

Because of the University students' disregard for traffic lights at 14th and S, no traffic lights will be installed at 16th and S.

This was the reason stated by Robert Holsinger, city traffic engineer. Holsinger spoke before the Lincoln City Council concerning a request for a pedestrian-operated traffic signal at the intersection of 16th and S streets.

"We have no intention of installing traffic lights at that location, basically because the students pay no regard to the present traffic lights at 14th and S," explained Holsinger.

Holsinger said the request came from one of the University dormitories.

The University police department has been requested to police the 14th and S intersection during periods of heavy pedestrian crossing,

NEBRASKAN APPLAUDS

Fedde Hall officers are: Judy Loren, president; Joyce Huebner, vice president; Linda Grubb, treasurer; Gloria Scherer, secretary; Kathy Fink and Dorothy Poirer, social chairmen; Judy DeVasure, AWS representative.

LITTLE MAN ON CAMPUS

Campus Maintenance Is Duty Of Physical Plant

The task of keeping the University campus clean and well-maintained falls upon the Physical Plant office, which is headed by George Miller.

"We work with the architect, supervise the negotiating and letting of bids, oversee the construction, and then operate the building after it is completed," Miller said.

To this end, Miller has a permanent crew of 80 employees. "We have about 60 groundskeepers," Miller says, "and 15 painters. Each building on the campus has its own maintenance man and workers are assigned to the buildings as they are needed."

In addition to maintaining the buildings on campus, Physical Plant employees also care for lawns and trees on both the City and East campuses.

Miller admitted that he would like to see better observance of the "keep off the grass" signs that are posted around campus.

"There's no question that the campus would look much better if those signs were obeyed," he said.

The Physical Plant office is assigned a specific budget each year for special projects.

"Work needed to be done often has to wait for money," Miller said. "We have increased our painting crew recently, so we will be able to do more work in that area."

Miller explained that his office has more than 300 projects planned for the near future.

"There are six new buildings going up on campus in the near future," he said. "And another major project is adding cooling systems to buildings for use during the summer."

Miller pointed out that taking care of the campus is a year-round job.

"Our men clear the walks and work inside the buildings during winter," he said. "They don't do any more work during the warm weather than they usually do, they are just more noticeable outside."

"Let's unplug the computer, boys! Start thinking!"

A lot of people believe that someday computers will do all their thinking for them.

Well, a funny thing is going to happen on the way to the future: You're going to have to think harder and longer than ever.

Computers can't dream up things like Picturephone service, Telstar® satellite, and some of the other advances in communications we have made. Of course, we depended on computers to solve some of the problems connected with their development. But computers need absolutely clear and thorough instructions, which means a new and tougher discipline on the human intelligence.

And it will take more than a computer to create a pocket phone the size of a matchbook, let's say... or find a practical way to lock a door or turn off an oven by remote telephone control, or to make possible some of the other things we'll have someday.

It takes individuals... perhaps you could be one... launching new ideas, proposing innovations and dreaming dreams.

And someday, we're going to have to find a way to dial locations in space. Makes you think.

And it will take more than a computer to create a pocket phone the size of a matchbook, let's say... or find
