The Other Half Panhellenic Considers Greek Week Concert

University Theater will present the second production of "Misanthrope" Nov. 10 and 11. Performances of Moliere's 17th century comedy will be given at Howell Theater beginning at 8 p.m.

The Backstage Club of the Lincoln Community Playhouse will sponsor the production of Andrew Backer's "Didn't He Ramble." Tryouts will be held Nov. 19, 20 and 21 from 7:30 to 10 p.m. at the Playhouse on 18th and L street.

The play will be directed by Backer, who won the Nebraska Centennial Playwriting Contest last May. Roles are available for seven males, one female, and jazz musicians.

Ticket sales will begin Nov. 14 for "Never Too Late," the season's second production by the Lincoln Community Playhouse. The play will be presented for three consecutive weekends beginning Nov. 17.

Sheldon Art Gallery will present Shoot the Piano Player, Nov. 8 as part of the foreign film program. The French film is directed by Francois Truffaut and stars Marie Du Bois and Charles Aznavour.

The movie concerns a timid concert pianist who retires from public life to play the piano in a bar, but becomes involved in gangland suicides and gunfights.

Charles Aznavour, who plays the pianist, will appear in person at the Nebraska Theater Nov. 14 in conjunction with the Speaker Artist Series.

The Nebraska Union will feature "Die, Die, My Darling" Nov. 10 and 12 as part of the weekend program. The film will be presented at the Union Friday at 7 p.m. and 9 p.m. and Sunday at 7:30 p.m.

The movie, starring Stephanie Powers and Tallulah Bankhead, is the story of a young girl held as hostage by a religious fanatic bent on atonement for an imaginary crime.

The Lincoln Friends of Chamber Music will sponsor a performance by the Guarneri Quartet Nov. 10 at Sheldon Auditorium. The four string musicians have toured America and Europe and have released three best-selling albums.

An exhibition of the work of young Mexican painters will begin at Sheldon Art Gallery Nov. 14 and will continue through Dec. 17. The display was organized by the University of Texas and the National Institute of Fine Arts of Mexico.

A panel exhibition of photographs, plans and perspectives concerning designs by prominent American landscape architects are being displayed at the University's School of Architecture Gallery through Nov. 12.

The possibility of booking Henry Mancini or Harry Belafonte for a concert to be held in conjunction with Greek Week was presented to Panhellenic Monday by representative Jan Binger.

J. A. Weir Collection On Exhibit

An exhibition of the work of J. Alden Weir, American graphic artist, is being displayed at Sheldon Art Gallery. The collection will remain at the Gallery until Dec. 3.

The display includes 128 examples of etchings, dry-points and lithographs produced by Weir between 1885-93. The works were done during the evenings and leisure time when Weir was not painting. He said that he particularly enjoyed dry-point because "it was easy to carry about in one's pockets a half dozen plates which would fill up odd moments."

Most of the artist's work is concerned with his family and friends or the landscape around his home in Connecticut. He also illustrated scenes from New York, where his studio was located.

Panhellenic also discussed assessing fraternity and sorority members a fee of \$2 to help finance the concert and a Greek Week speaker. Panhellenic will vote on the issue at a later meeting.

Miss Binger urged support of the assessment, and added that the fee would probably lower the admission price for Greeks while tickets to the public would be sold at regular admission.

The tentative schedule for Greek Week, which will be from April 26 to April 29, 1968, includes the following events: a concert, a banquet, a Greek Week conference and individual house activities.

Sororities have been considering a proposal presented by Kappa Alpha Theta to host a foreign exchange student. Under the proposal, each sorority may adopt a foreign exchange student as a type of social affiliate, participating in house functions.

"The program would be for the benefit of both the foreign exchange student and her hostesses," Jane Johnson, Panhellenic delegate said. "Two universities that I know of—Arizona and Colorado—are doing similar programs."

In other business, a member of the pledge trainer's council reported that it was the consensus of those present at the pledge trainer's meeting that the spirit trophy for Sigma Chi Derby Day be abolished. A resolution will be drawn up.

Ag Facilities Provide Research Station

Expansion of the University's agricultural experiment station facilities, including three new buildings on the East campus, will allow it to perform better services through added research ability, Dr. Howard Ottosen, director of the experiment station said Tuesday.

"The increased support of the state legislature during the past year will allow us to enhance our effectiveness in agricultural research which has not been possible with our present facilities," he said.

The new developments on the University campus are a new animal science building, a new seed laboratory, a new child development laboratory and the remodeling of the old seed laboratory.

MORE SPACE

"These new buildings will provide an expanded laboratory program for the specific departments to replace the old ones which lacked the necessary space," he said.

The new 250,000 dollar child care laboratory will be located on the north end of the East campus and will "provide a more sophisticated and effective means of research," Ottosen said.

The laboratory provides students in home economics with an opportunity to care for and observe children, which is a valuable part of research in this area, he pointed out.

INCREASED RESEARCH

"The new facilities will provide the students with better means to objectively observe and note the children's actions," Ottosen commented.

The new seed laboratory, which expected to be finished sometime this winter, will allow increased research on various kinds of plants.

The new facility will cost about \$230,000 and is expected to relieve the lack of space that is present in the old structure, Ottosen said.

The new seed laboratory will be located on the north end of the campus.

NEW VET FACILITY

Completion of the new animal science building is slated for sometime during next semester and will cost about \$1.5 million, Ottosen recalled.

"The new animal science building will be mostly an expansion of the present facilities, but it will allow for more effective research

because of the greater volume of work that can be carried out," he said.

Other high points of the experiment station's operation this year will be the construction of a new veterinary medicine facility which is in the planning stages at the North Platte station.

"The new facility will provide a greater capacity for research on various types of animal diseases," Ottosen said.

LOW-COST MEALS

Ottosen also mentioned a program to develop a computerized evaluation of a low-cost meal project as an outstanding new achievement of the experiment station.

"The program would consist of feeding information, such as fat starch and carbohydrate content of the food, into a University computer to determine the cost of a suitable meal," he said.

The information obtained in this way could be used in feeding large groups for example, in school systems.

STATEWIDE

The low-cost meal information could also be used on an extension basis, Ottosen pointed out.

"Ideal meal situations could be circulated for use throughout the state," he suggested.

Another program being developed by the experiment station is a new method for processing pork without first cooling it.

The "hot pork" process would speed up meat production.

Engineers . . .

Your technical career starts the first day you're at Tektronix

At Tektronix, you start working as an engineer right from the beginning, getting the kind of experience that will put a solid foundation under your future. You'll be assigned specific projects in the many electronic, and mechanical areas involved in developing advanced oscilloscopes. And you'll have unusual freedom for creativity and individual accomplishment. It all starts the day you start to work . . . at Tektronix.

Opportunities for EEs and MEs

If you're headed for a career in circuit design or mechanical packaging design, you'll start work at Tektronix in production engineering and evaluation of engineering prototypes before joining a project design group.

ON-CAMPUS INTERVIEWS Nov. 15

An equal opportunity employer

Come gather 'round people
Wherever you roam
And admit that the waters
Around you have grown.
And accept it that soon
You'll be drenched to the bone,
If your time to you is worth savin'
Then you better start swimmin'
Or you'll sink like a stone,
For the times they are a-changin'!
