

Don't blame computer; Blame God instead

Don't hate the computer, the mistakes in your class schedule were probably your own.

"That's right," said Lee W. Chatfield, Dean of Academic Services. "Half the mistakes in schedules resulting in incomplete programs were due to student errors."

For those students who did make such mistakes and for those who through no fault of their own wound up with incomplete schedules, there were the drop and add lines.

From Jan. 19-23, for the first time free drops and adds were run exclusively for those students with incomplete schedules. Prior to this semester, a student who pre-registered and got only a portion of the total hours he asked for was required to stand in the line at the same time as did students who wished to change from one course to another.

He also stated that only about half of the students of the estimated 2,000 students with incomplete schedules took ad-

vantage of the special drop and add session.

"Those who didn't take advantage of that period probably joined the lines with the other pre-registered students Jan. 26-28," said the dean.

UPC expansion creates programs, needs chairmen

The Nebraska Union Program Council (UPC) will be holding interviews to select chairmen for its various committees Saturday, Feb. 7, according to Tom Lonnquist, program council president.

At its most recent meeting the UPC overhauled the committee structure in order to in-

crease the level of student participation in campus life programming, Lonnquist said. Rather than handling a large area, the chairmen will be in charge of more specific and short term projects.

In an effort to continue its current projects and allow for expanded programs the Union

will not limit its interviews for these specific areas, Lonnquist continued. If a student has an idea for a new program, a position can easily be created.

No previous experience in Union programming is necessary to apply. Application forms should be picked up immediately in Room 128 of the Nebraska Union.

**If you don't like the way people talk to each other,
we'll pay you to change it.**

Campus Calendar

Wednesday, Feb. 4,
Nebraska Union
12:30 p.m.

Placement

2:30 p.m.

Food Handlers Institute

4 p.m.

We're in the communications business.

And during the next 30 years we're going to upgrade all the equipment we now have in order to provide even better service to our 6 million existing customers.

As if that weren't enough we're also going to have to come up with enough new equipment to provide telephone service to about 26 million more people. As well as equipment for a much more extensive data communications program.

We need enough people (electrical, civil, mechanical and industrial engineers, designers, accountants and economists) to plan, design, build and operate a company that will be four times bigger than we are today. We also need engineers, researchers and scientists to develop electronic switching equipment, laser and other communications systems we'll be using 10, 25 and 50 years from now.

But this is only one part of our communications business.

Our Sylvania people, for example, are involved in other types of communications. Like color television sets, satellite tracking stations and educational television systems.

Automatic Electric, Lenkurt, Ultronic Systems and some of our other companies, subsidiaries and divisions are working on advanced types of integrated circuitry, electro-opticals and communications systems between people and computers and between computers and computers.

So if you think you have something to say about the way people talk to each other... we're ready to listen.
