Livestockers fight on

Nebraska livestock producers are making significant strides in getting the problem of handling livestock waste under control, a University Extension agricultural engineer said this

E. A. Olson said the number of feeders involved in exploring whether waste control systems are needed for their lots, developing plans for suitable systems, is increasing. Progress is encouraging, although much remains to be done before the deadline of December 31, 1972, set by the Nebraska Water Pollution Control Act of 1967. Olson said.

As of late February, 62 livestock producers had initiated plans for a waste control system, Forty-nine of these plans have been sent to the Water Pollution Control Council for approval and 41 of these have been approved for construction.

Government agencies, working with the Council and the Nebraska Livestock Pollution Control Advisory Committee, have developed a streamlined procedure for handling paper work on the plans, and for getting Council approval on proposed waste control systems.

Waste control systems are being planned for beef, dairy and swine operations. Producers who need waste control systems can generally get assistance from the Soil Conservation Service on the local level.

While there is no definite information available regarding the number of waste control systems that will be needed, it appears that approximately 48 percent of Nebraska feedlots will need some modifications for waste control.

This is based on a survey of 50 feedlots in 1970 by the

a mass transportation system, Breslow said he doesn't know what stand he'll take on the busline problem.

THE CITY IS subsidizing the busline company for up to \$25,000 to continue in operation until Sept. 1. At that time, the city must decide whether to buy the lines.

Claiming that it could cost the city \$350,000 the first year to operate the buslines. Breslow said that no one knows how much money the city can afford to spend.

The candidate advocated higher wages for the city's police and firemen to reduce the rapid turnover in personnel in these departments.

BRESLOW SAID ANOTHER campaign issue is the concept of eminent domain, where residents are forced to move because of city expansion, as with the proposed Northeast Radial.

"The city should provide relocation costs to families forced to move, Breslow said. "It's not fair otherwise," he added.

Breslow said he's confident he'll win a place in the May general election and then step up his campaign with limited advertising.

. From all the encouragement and support that's been offered me, I'll be a city councilman on May 4," he stated.

Water Pollution Control Council, which showed that in 24 percent of the lots, feedlot waste runoff discharges into a roadside ditch or onto other property. Feedlot runoff discharges into intermittent streams from 18 per cent of the lots, and on six per cent, the runoff flows directly into a

flowing steam. While about half the feedlots may need some changes to meet provisions of the act, steps needed to control waste may be very simple in

Definite information is sketchy on the progress of construction of facilities. Considerable construction activity is anticipated this spring, however, since 27 of the systems have been approved by the Council since November 1,

In 1971 and 1972, considerably more activity is anticipated in this area. Livestockmen who need waste management facilities are required by law to have them completed and operational by December 31, 1972. To encourage activity, the Nebraska Livestock Feeders Association in their annual 1970 meeting passed a resolution advising feeders "to begin instigating waste control problems on their feedlots immediately."

American male die and think how heavily males pay for their status, how utterly patriarchy controls them," she said.

To end this repressive system Millett called for a radical change in the relationship between the sexes, This sexual revolution would mean an end to the temperment, role and status differences between the sexes which are enforced by patriarchy.

PAST REFORMS have not been radical enough, Millett said, they didn't attack the roots of the patriarchal system.

"I have come by degrees to believe that the changes I want cannot occur in the system as it is," the feminist
