

# "Stereo Studio? That's the place with all the expensive components, isn't it?"

Yes - and no. Stereo Studio does sell some of the finest stereo components made. We can put together a system for you that will cost \$10,000 if you happen to have that much left over from your summer job, after tuition.

But mainly we just specialize in the best audio components in all price ranges. Our System One, below, at \$239 is made up of components unequalled in their price range. We know that because we've tested them thoroughly, as we do every component we sell. We're so sure of their reliability and adherence to published specifications that we offer a five-year parts, three-year labor warranty.

We do not try to entice you with promises of fantastically low prices in our advertising. We do promise you the "Best Buys on Quality Components".

## SYSTEM 1

Here is a true component stereo system for a modest budget. Below this system's price, you will find many compacts that do not offer true component flexibility, and a few components whose design represents severe compromises.

Our System One's control center is the new Superscope R310 AM/FM Stereo Receiver. The receiver's amplifier section delivers 8 watts RMS per channel, which is adequate to fill a small-to-medium listening area with clean sound. The Superscope R310 has pushswitches for power, Quadraphase, Tape Monitor and Loudness Contour. Input selector has positions for AM, FM, FM Stereo, Auxiliary and Phono.

The BSR 2260 AX Automatic Turntable has a full-size steel platter, adjustable anti-skating control and cue/pause mechanism. It comes equipped with a Shure M-91 magnetic cartridge and includes base and tinted dust cover.

Speakers are the Utah UT80, with 8-inch woofer/midrange and 3 1/2-inch tweeter encased in a handsome walnut-finished enclosure.

## SYSTEM 2

As you begin to pay more for moderate-priced stereo systems, you receive significant audible improvements. For slightly more than \$100 over the price of System One, we can offer far greater power, less distortion, more flexibility in controls, and speakers that deliver broader, cleaner response.

System Two has as its control center the best-selling Harman-Kardon 330B AM/FM Stereo Receiver. It delivers 20 watts per channel continuous, with both channels driven into 8 ohms, at 1 kHz, at 1.0% THD and IM distortion. Its tuner section includes a tuning meter, and the front panel has provision for switching between two speaker systems.

Turntable is the BSR 2310 AXE, with anti-magnetic shielded platter and viscous-damped cue/pause control. It comes equipped with ADC K-8E elliptical diamond stylus magnetic cartridge, base and tinted dust cover.

The speakers in System Two are the remarkable Advent 2's. Inside an attractive molded cabinet, Advent has placed speaker components usually associated with much more expensive units, and capable of delivering absolutely convincing sound quality.
