Day or Night

ENTER ↑

We offer you the key to unprecedented calculating power.

We invite you to experience it. Come see for yourself how Hewlett-Packard's exclusive ENTER ↑ key lets you "speak" with total consistency to their pocket-sized scientific calculators.

It lets you load your data into a 4-Register Stack, so you always enter and process them the same way, no matter what your problem. It means you rarely have to re-enter data and you can see all intermediate data anytime.

It's one reason Hewlett-Packard's HP-45 is the most powerful pre-programmed pocket-sized calculator ever built and their HP-35 is the runner-up. Here are three of many others.

1. The HP-45 is pre-programmed to handle 44 arithmetic, trigonometric and logarithmic functions and data manipulations beyond (+, -, ×, ÷). The HP-35 handles 22.
2. The HP-45 stores constants in nine Addressable Memory Registers and has a "Last X" Register for error correction. The HP-35 has one Addressable Memory Register.
3. Both display 10 digits in fixed-decimal or scientific notation and automatically position the decimal point throughout a 200-decade range.

If you're looking for unprecedented calculating power for your money, by all means see and test these instruments. The HP-45 is priced at just \$325; the HP-35—\$225. Both are on display at our place. Come on in. And bring a stubborn problem.

Open 8-5, Monday - Saturday
