

Data gathering topic of symposium

Four speakers at a motivation symposium this week will express ideas that "will influence psychologists' thinking around the world," according to William Arnold, UNL psychology professor.

The speakers will lecture at the Nebraska Center for Continuing Education Thursday and Friday about methods psychologists use to gather behavior data, he said.

Arnold said psychologists either gather data by taking account of nonobservable elements such as a person's desires or by eliminating these unobservable elements in their experiments.

According to Arnold, three of the speakers will advocate employing only observable data in psychological observation: Willard Day of the University of Nevada, Joseph F. Rychlak of Purdue University and Klaus F. Riegel of the University of Michigan. Amedeo Giorgi advocates using the nonobservable statistics in experiments, Arnold said.

The first session this week is one of two "Symposium on Motivation" sessions at UNL. The other session will be in February.

Arnold estimated several hundred faculty members and students will hear the speakers during this session.

You failed your pass-fail class.

You owe yourself an Oly.

We want to sound you out.

You see, we've discovered a new collection of sound systems by a new firm: Meriton. And we're impressed. So much so that plans are under way to install a permanent Meriton sound center in our store.

As a preview, we're offering Meriton's HF-2000/SP-200. A sleek, remarkably compact component-style FM stereo/FM/AM receiver and turntable system. As you can see, the styling is modern, featuring brushed chrome and walnut cabinetry. But it's not what you see that's important.

Now, we can quote features and specifications. Like a solid state amplifier for

resonant sound. OTL/ITL circuit to eliminate distortion. Tone control that increases bass, decreases treble. Tuner with high degree of selectivity. Illuminated tuning bar. Professional style turntable. Tubular tone arm with automatic return and shut-off. Viscous cuing, ceramic cartridge. Wide range speakers housed in acoustically matched walnut veneer hardwood cabinets. Hinged dust cover. But, the proof is in the listening.

That's what Meriton is all about. Listening. Their audio systems have been engineered to satisfy the most sensitive testing equipment around. Your ears. We invite you

to test the HF-2000 in our store. The more you trust your ears, the more we think you'll like it.

Meriton HF-2000/SP-200, \$239.95.
