**DID YOU HEAR THE ONE ABOUT THE REVERSE POLISH NOTATION?**

The story goes that this guy walked into a college bookstore and bought a calculator that worked backwards, or sideways, or something. But once he got the hang of it, he found that Reverse Polish Notation meant he worked with only two numbers at a time, solving the most complex sequence calculations quickly, accurately and naturally. The machine of all these and many other marvels is the Model 4510 (the "Mathematician") from National Semiconductor. Suggested retail under \$25. And that's no joke.

**National Semiconductor**
