

Students offered insight

The University Counseling Center is offering students an opportunity to discover their personalities and career interests next Wednesday and Thursday afternoons.

Career and Personal Awareness Days "should give the students better insight on their personal and occupational interests," said Vernon Williams, director of the Counseling Center.

Williams said inventories, designed to evaluate personalities, will be distributed to any student wishing to be tested.

Two weeks after the testing, a counseling appointment will be made with the student to define the inventory results, he said.

Results are determined on comparisons between the student and tested professionals in the field the student is pursuing, Williams said.

He said students' personalities are classified according to individual comparisons to a previously defined personality.

"These tests don't tell everything, but we feel they will help direct the student," Williams said.

Interested students must preregister, he said.

Registration can be made Monday and Tuesday, from 8 a.m. to 5 p.m. and Wednesday from 8 a.m. till noon, by calling or visiting the Counseling Center, third floor Seaton Hall.

You've always thought you were a Good Neighbor. Now prove it.

Before Sound Guard,[®] the only way to prevent your records from wearing out was not to play them.

Magnified, you can see record vinyl wearing away.

With same magnification, record vinyl shows no wear.

If you've played any record often enough, you've heard the inevitable occur. It wore out.

While "pops," "hisses," and other surface noises began making their appearance on your favorite records, high frequency sounds—like violins and flutes—began disappearing.

The villain behind this destruction is friction. (If a diamond cuts through steel, you can imagine what a diamond stylus does to vinyl records.) Fortunately, from outer space has come a solution to record degradation. It's called Sound Guard.[®]

A by-product of research into dry lubricants for aerospace applications, Sound Guard record preservative puts a microscopically-thin (less than 0.000003") dry film on records to protect the grooves from damage. Yet, remarkably, it does not degrade fidelity.

Independent tests show that Sound Guard preservative maintains full amplitude at all audible frequencies, while at the same

time significantly retarding increases in surface noise and harmonic distortion.**

In other words, when applied according to instructions, a new record treated with Sound Guard preservative and played 100 times sounds the same as one in "mint" condition played the first time!

Sound Guard preservative comes in a kit (complete with non-aerosol pump sprayer and velvet buffing pad). It is completely safe and effective for all discs, from precious old 78's to the newest LP's including CD-4's.

Recently introduced to audiophiles, Sound Guard preservative is now available in audio and record outlets.

**For complete test results write: Sound Guard, Box 5001, Muncie, Indiana 43702.

Sound Guard[®] keeps your good sounds sounding good.
