

Pollsters to count our furry friends

Students with pets and little or no money might want to hide their furry friends in the closet until Dec. 18.

A federally funded survey of the number of dogs and cats in Lincoln households is currently being taken. The survey, being taken by the Lincoln-Lancaster County Health Department, will require the owners of all unlicensed pets to license them within 15 days.

Dennis Grams, animal control specialist with the Lincoln-Lancaster County Health Department, said \$29,000 of Comprehensive Employee Training Act funds was allocated for the six month survey. The survey will be completed Dec. 18.

Grams said the survey was not ordered to increase license sales but to gain more accurate information for the

animal control department.

The survey is being taken by five Health Department employees. The five are asking Lincoln households to report the number of dogs and cats they own and how many are licensed. The pollsters also will ask if any of the pets have been neutered.

The pollsters will emphasize the advantages of licensing pets, Grams said. He said these include a new computer used in licensing that will allow animals picked up to be taken home to their owners rather than to the pound as in the past.

"Now we can find out where the owner lives fast so we can return their pets to them the same day," Grams said.

Choose your second calculator first.

Choose the new HP-29C from Hewlett-Packard.

The new HP-29C could be the last calculator you'll ever need. Because it has the programming power of calculators costing much more—and it has Continuous Memory.

Saves your programs and data.

Switch the calculator off, then on your problems are still there, ready to solve your programs day after day. The HP-29C's Continuous Memory retains the data stored in 16 of its 30 addressable registers and in the display register.

Write programs of 175 keystrokes.

Each function—one, two, three, or four keystrokes—requires only one step of program memory. And with 98 steps of continuous program memory, that means you can easily write programs of 175 keystrokes or longer.

Powerful programming features.

The HP29C gives you conditional branching, three levels of subroutines, indirect addressing, relative addressing, labels, increment/decrement conditionals, pause, indirect storage register arithmetic, and more.

Easy editing.

Review your program quickly and easily and insert or delete operations as necessary. You can even run your program one step at a time and check intermediate answers.

Sooner or later, chances are you're going to buy a Hewlett-Packard calculator. And the sooner the better.

Come-in and see the new HP-29C Advanced Programmable with Continuous Memory today. Only \$195.

We carry all of the Hewlett-Packard Calculators.
