JVC QUARTZ-LOCKED

AUTOMATIC RETURN TURNTABLE

The turntable evolution comes full-swing with the introduction of the new JVC Quartz turntable series. Since we introduced the world's first Quartz-controlled turntable in 1974, we've been constantly refining the ultra-precision oscillator circuits and improving the characteristics of our motor drive system.

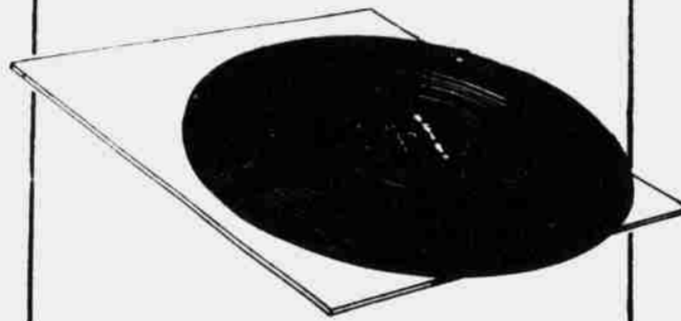

DIRECT-DRIVE DC SERVOMOTOR

And we can now honestly state that JVC speed and accuracy are near absolute.

PL-514 PIONEER®

The pleasingly-priced PL-514 is a particularly attractive Pioneer new model with Auto-Return/Quick-Start convenience. Here are some of its highlights:

- **Auto-Return** — Despite low price, the end-of-play/arm-lift/return convenience of the PL-514 rivals that of expensive automatics. Power-off on return is automatic. The mechanism is simply designed with use of stainless steel for better and surer performance.
- **Quick Start** — Tone arm is synchronized with motor switching so that moving the arm toward record on the platter automatically starts rotation.
- **Synchronous Motor** — Belt-driven platter shows constant speed accuracy because speed of motor is synchronized with power-line frequency.
- **Simple Controls** — All are human-engineering designed. Play/Stop lever and Cueing lever arranged on attractive, clean-line cabinet
