

**A**s in all other new Pioneer turntables, the PL-514 offers extremely high anti-howling characteristics. The kind of "feedback" or acoustic resonance caused by sound pressure from high-output speaker systems, for instance, is prevented from harming your music by a number of effective features. "Floor howling" — that caused by vibrations of structure-floors, shelves, desks, etc. — from speakers, are damped before they reach the tone arm and stylus. And they can never spoil the near-perfect operation of the synchronous motor to cause speed errors in the platter. A high-sensitivity tone arm, a noiseless belt-drive system, a convenient Quick-Start mechanism and Pioneer's time-tested Auto-Return arm device. They add up to one of the highest cost/performance ratios available in today's sophisticated turntables, and all are yours to enjoy in the Pioneer PL-514. WITH CARTRIDGE

# Straight Talk

## Music gets you up.

### Step Up to Stereo Excellence

Pioneer has an advantage few other stereo makers can offer: our investment in hi-fi technology is extensive and expensive, but because we're the world's leading hi-fi manufacturer, our cost-per-unit factor is lower for considerable savings for you. You benefit from such advanced electronic innovations as hybrid ICs in the power amplifier section, Pioneer-exclusive ICs in the FM/AM tuner section and high-efficiency circuit techniques throughout the sensibly-priced SX-680 stereo receiver. Power delivery is a continuous 30 watts per channel, both channels driven into 8 ohms, from 20 to 20,000Hz, with no more than 0.1% total harmonic distortion. And that adds up to stereo excellence in the reproduction of your favorite music. Find out why more people prefer Pioneer — hear the sensational sound of the SX-680.

The very latest Pioneer research in acoustics and audio technology has been applied with amazing success in the HPM-40, a 3-way, 3-speaker system employing a 10-inch (25cm) Carbon Fiber Blended cone woofer-midrange, a 1-3/4-inch (4.5cm) tweeter and a unique High Polymer film supertweeter. Pioneer's application of newly-developed measuring techniques to impulse response, accumulated spectrum, dynamic distortion and other acoustic phenomena has revealed new relationships to the human auditory sense. These breakthroughs of science are brilliantly translated into new dimensions in the art of musical reproduction in Pioneer's all-new, compact HPM-40.
