## U.N. spokesman: System of apartheid must go

By Keryl Knake

The United Nations considers South Africa's system of apartheid a "crime against humanity," a U.N. spokesman said Friday.

Abdennour Abrous, chief of the United Nations Center Against Apartheid, spoke in the Nebraska Union about U.N. condemnation of and policies against South Africa's system of strict racial segregation. The system is the only system of institutional discrimination in the world, he said.

The United Nations has been following the situation in South Africa since 1946, Abrous said. Its first approach to the problem was to work with South African leaders to try to convince them the system was wrong, he said, adding that this had no effect. In 1960, the United Nations began advocating the economic, social and cultural isolation of South Africa, Abrous said.

This policy of isolation is still followed, and all U.N. members are encouraged to participate, he said.

## RHA recruits for panel slots

By Chris Choate

Residence hall members now have the opportunity to better express their concerns about important housing issues.

At Thursday's Residence Hall Association meeting, the council passed a motion to actively recruit any residence hall member who would be interested in working on any of the RHA committees.

By serving on an RHA committee, a student can get actively involved with important resident hall issues and have the opportunity to use his creative talents and leadership abilities, RHA members said.

Positions are open on the following RHA committees:

— Programming: develops educational and/or social programs for the residence halls.

— Judicial Board: hears appeals about sanctions received by any residence hall member for misbehavior and considers the fairness of these decisions.

— Contract Review Board: hears appeals from residents who are denied their requests to move off campus.

— Lighting and Security: will examine the lighting and security situations on both City and East campuses, determine where problems exist and make recommendations to RHA and UNL on ways to help improve these conditions.

— Parking: will examine the current parking situation at UNL and will make suggestions to the RHA on ways to help improve the present parking situation.

Because RHA is encouraging that many get involved, the number of committee positions available is not restricted, RHA President Bob Wolz said. Also, if one or a group of hall residents discovers a problem that is not being recognized, RHA might form a committee to analyze and attend to the problem. For more information, contact the RHA office, Neihardt Hall 107, 472-1066.

# E-Systems continues the tradition of the world's great problem solvers.

Maxwell's electromagnetic field theory led to huge practical scientific advances. His light theory led to his own development of one of the first color photos and the kinetic theory of gasses.

Scientists and engineers at E-Systems are carrying on in the tradition of Maxwell's genius. Today, they are solving some of the world's toughest problems in electronically steered phased array antennas, electromagnetic scattering and solar ray concentration, using his findings as tools.

E-Systems is main-

taining a reputation for designing and building communications, data, antenna, intelligence and reconnaissance systems that are often the first-of-a-kind in the world.

For a reprint of the Maxwell illustration and information on career opportunities with E-Systems in Texas, Florida, Indiana, Utah or Virginia,
