# PAID ADVERTISEMENT HOW TO BUY A DIAMOND ENGAGEMENT RING WITH CONFIDENCE AND KNOWLEDGE

LIGHT

YELLOW

# By John Tavlin President Nebraska Diamond

For the average consumer, buying a dia-ond can be one of the most confusing and ng and frustrating experiences imaginable. The con-sumer is often confronted with a barrage of conflicting claims from various iewelers intent on ng their product. If the consumer is not armed with adequate product knowledge, they stand little chance for success in the jewelry

A UNIFORM SYSTEM OF DIAMOND GRADING Serious shopping for diamonds begins with an understanding of the Gemological Institute of America (GIA) and its diamond grading system. The GIA is a non-profit organization dedicated primarily to the pursuit of gemological education. It owns and operates the most prestig laboratory for the identification and cla stigious trade sification of gem stones in this country. The GIA is considered by the diamond industry to be the final and tive word on diamond grading stan most authorit dards in the United States and its diamond grading system is, by far, the dominant grading system used by diamond cutting firms and jet manufacturers in this country today.

Knowledge of the GIA diamond grading sys-tem is a prerequisite for informed buying of dia-monds, and knowledge of that system without an actual "hands on" demonstration is virtually impossible. The accompanying chart shows a total of 240 separate and distinct combinations of GIA grades and there is a separate and distinct price list for each grade within each size category. At Nebraska Diamond we give all customers a thorough explanation and demonstra tion of the GIA diamond grading system under laboratory conditions using actual examples, so that the customer can see with his or her own eyes the characteristics and appearance of the various grades. As a result, Nebraska Diamond customers can identify the various GIA grades by themselves and do not need to help rely on the jeweler's representations. The two principal reasons why customers need this special instruction and knowledge to survive in the y marketplace are:

1. Many jewelers invent their own personal grading system because by doing so they make it difficult or impossible for the consumer to comit difficult or impossible for the consumer to com-parison shop. The GIA system is a uniform system of diamond grading and gives the consumer a standard of comparison.

who do represent diamonds to mers in GIA terms often take liberties with m and just "puff" the grade up to the GIA sy whatever level is necessary to make the sale, alieving that the customer will not be able to identify the deception. A diamond which is ed a GIA grade by one of these je may actually be significantly inferior to a diamond offered, with a seemingly lower GIA grade, by a jeweler who adheres to the strict grading stan-dards we use at Nebraska Diamond. Unless the consumer has adequate product knowledge, they risk being duped into purchasing a low quality diamond. Your only real protection as a consumer is to educate yours elf about the product. At Nebraska Diamond we provide our customers ith an education that makes them the be informed diamond buyers in the market and ve've been doing it for over fifteen years. You do not get the Nebraska Diamond consumer education program at any other jewelry store

## THE RELATIONSHIP OF COLOR, CLARITY, CUT AND CARAT WEIGHT

Color, clarity, cut and carat weight all have an important impact on the ultimate value of an important impact on the ultimate value of your diamond. In "The Complete Guide to Buying Gerns" (Copyright 1984, Crown Publishers, Inc. New York), diamond authorities Antoinette Leonard Mattins and Antonio C. Bonanno, F.G.A., P.G. state, "If we were to iden-tify the factors that determine the value of a dia-mond in order of their importance, we would list them as follows:

ar.

- Body Color (color grade)
  Degree of flawlessness (clarity grade)
  Cut and proportion (often referred to as the n

3. Cut any proposation (often referred to as the make) 4. Carat weight" Color refers to the hue present in the body of the diamond. Color is observed by placing the diamond upside down in a white color grading trough and viewing through the side of the gem. is the characteristic most easily noticed by the human eye and it has the most impact on the appearance of the gem, hence, color carries the appearance most value.

most value. Clarity refers to a measurement of the inter-nal flaws and surface blemishes present in or on a diamond. Sometimes internal flaws and sur-face blemishes can be seen only under magnifi-cation. To magnify a diamond a jeweler's loupe or a microscope is used with 10X magnification. The microscope is often used more as a sales tool than as a gem grading instrument because is "laboratory" appearance can be impressive to consumers. The microscope, however, is a cum-

bersome piece of equipment and is less flexible than the loupe for examination of diamonds. For , among others, the loupe is by fai the dominant grading instrument used by dia-mond dealers. At Nebraska Diamond you may view your diamond under both a jeweler's loupe and under a microscope designed for profes-sional diamond examination. Among color, clarity, cut and carat weight, clarity is the second most observable characteristic and has the second most impact on the appearance of the gem, hence, clarity carries the second most value.

Cut refers to the proportions of the diamond. A diamond can be cut to any one of an infinite number of proportions depending on the angle number of proportions depending on the angles of the facets. These angles can vary from dia-mond to diamond. As explained below, proportion analysis is extremely subjective and the effect of differing proportions on the appearance and value of the diamond is often a matter of opinion. Generally, however, except for the pro-portion called the "heavy make" discussed below, cut is a less observable characteristic than color or clarity from a quantitative standpoint and, hence, cut generally carries less

Carat weight refers to the weight of the diamond and not to its size. This is an important listinction because two diamonds which weigh the same can appear drastically different in size and this may result in drastically different values even if color and clarity are the same in both gems. Sometimes customers forget that size is a dimensional linear measurement express millimeters. The term "Carat" is only a weight asurement. One carat is equal to 1/5 gram. If me a diamond is cut with its weight concentrated in its depth, a proportion called the "heavy make", it will appear much smaller than a diamond of the exact same carat weight cut with its weight concentrated in its width. The difference in value en these two diamonds can be substantial, often exceeding 40%. At Nebraska Diamond we avoid the "heavy make", but we have observed that the "heavy make" is very prevalent in today's diamond market. Therefore, it is extremely important that the consumer know how to recognize the "heavy make". As discussed below, however, consumers who do not have the consumer education we provide at ska Diamond are at a tremendous disa vantage when it comes to recognizing the "heavy make" and they risk buying it unknowing-

**CUT: THE MISUNDERSTOOD "C"** Among the 4 "C's" (Color, Clarity, Cut and Carat Weight) the subject of diamond proportioning (Cut) is easily the most misunderstood. The GIA has subdivided proportion analysis into four Classes based on table diameter, crown angle, pavilion depth, girdle thickness, finish and symmetry. Each Class contains wide parameters synthetry. Each Class contains who parameters for proper proportioning and, therefore, provides an infinite variety of differing cutting proportions all of which are considered equally appropriate within each Class. The GIA proportion analysis format, thus, illustrates what every diamond expert in this business knows: that there are lit-erally hundrack of different diamond perportions erally hundreds of different diamond proportions available which create beautiful and highly desirable gems.

Because there are so many accepted types of proportioning in diamond cut, there is no ent in the diamond industry on what constitutes the "best" cut. This is because the main factors affected by cut (dispersion and brilliance) cannot all be maximized in the same gem. persion" is sometimes referre

"Fire". Dispersion means the ability of the dia-mond to break down light into the spectral colors (blues, reds, yellows, etc.).

"Brilliance" refers to the ability of the diamond to return colorless or "white" light to the viewer. As common sense will tell you, if you increase a diamond's ability to break light into the spectral colors, you reduce its ability to return colorless or "white" light Conversely if you colorless or "white" light. Conversely, if you "white" light, you reduce its ability to return coloriess o "white" light, you reduce its ability to break light into the spectral colors. That is why there is no such thing as a diamond cut to maximum dispe mum dispe sion and maximum brilliance, both at the same time. By cutting to maximize one of these factors the other is compromised, and since both are of

the other is compromised, and since our are or equal importance, it is impossible to authorita-tively classify one type of cut as the "best". In buying a diamond it has been our experi-ence that the consumer desires the most beauti-ful gem his or her budget can afford. Precisely how dispersion and brilliance translate into now obsersion and oniliance translate into beauty, however, is a matter of personal opinion. In their chapter on "The Importance of Cut and Proportion", the authors of "The Complete Guide to Buying Gems" state, with reference to the per-centage measurements of various diamond cut-ting proportions, "No one has come to an agreement, however, on what the percentage should be, since some people prefer fire to brilliance and vice versa. This is why there are several and vice versa. This is why there are several accepted types of proportioning found in dia-mond cut, and 'beet' is a matter of personal pref-erence". In actuality, the difference in dispersion and brilliance between some differing diamond proportions is so slight that it is measurable only with sensitive laboratory instruments and is

1-1

T

FANCY 1-3 YELLOW GIA DIAMOND COLOR AND CLARITY TERMINOLOGY impossible to see with the naked eye. As discussed above, one area in which cut makes a big difference in the value of a diamond concerns the "heavy make". The term "heavy make" refers to a diamond that has a dispropor

IMPERFECT 1-2

Make refers to a diamond analysis a disproper-tionate share of its total carat weight concentrat-ed in the depth of the stone. Visually, this means that a "heavy make" diamond actually weighing 1 carat may only face up with the appearance and diameter of a 3/4 carat diamond cut to proper proportions. Because they face up so much smaller than they should, "heavy makes" are worth substantially less than properly proportioned diamonds. Because the "heavy make" is worth less, it costs the jeweler less, so they can sell it for less. When the jeweler fails to tell the customer that they are showing a "heavy make" and fails to explain that the "heavy make" is priced lower because it is worth less, the effect is to trick the consumer into thinking that they have purchased a full size diamond at a bargain des. This illusion is the terms and the set the price. This illusion is further enhanced when the jeweler shows only "heavy make" diamonds and does not show the consumer a full size diamond to enable the consumer to compare. In fact, the, problem of "heavy make" is virtually never explained to the consumer, so the consumer simply assumes that any diamond shown of a certain carat weight faces up the size that it should, and they purchase the "heavy make unknowingly. We feel that this failure to inform the consumer is unfair and that it constitutes deception by omission. At Nebraska Diamond we give our customers a detailed explanation of this important subject.

### **HOW TO SPOT DECEPTIVE** TRADE PRACTICES

Consumers should be aware of various trade practices which are common in the jewelry indus-try but which we feel are deceptive, unfair and, in many cases, illegal. Deceptive trade practices cost consumers incalculable sums of money annually. Awareness of these trade practices assist the consumer in spotting them and avoiding them when shopping for fine jew eiry.

Deceptive trade practices in the jewelry industry tend to fall generally into two broad cat-

ctices which lead the consumer to 1. Pra ieve that they are receiving a bargain pur-use when, in fact, they are not (fake "sales and

2. Practices which lead the consumer to believe the quality, quantity or description of the article being purchased is more or better than that which is actually delivered (active or conntation of the product either ve misrepre

by act or omission). The concept of the fake "sale" is an old one. Basically, it plays on the desire of the consumer to obtain a bargain purchase. Fake "sales" can be advertised or unadvertised. Here's how the scheme works: In the advertised fake "sale" scheme works: In the advertised fake "sale" scheme works: In the advertised fake "sale" value" or "reference price" or "appraised value" or "reference price" on an article of jewel-ry. They then advertise "special sale prices" or "drastic reductions" or "storewide 50% off clear-ance sale" or "certified savings" or something similar to drum up excitement, and then they offer the article to the consumer for less than the fictitious "market" price. The consumer buys the article believing they have received a bargain. In fact, though, under the scheme, the jeweler has

sold the article for the price they always intended to sell it for. There is no bargain because the article really wasn't marked down at all, so the consumer actually paid full price. The fake "sale"

1/10 ct. = 9 to 11 pts.

1 Exact Carat = 100 Points

scheme is also employed in unadvertised es". In the unadvertised fake "sale" the consumer walks into the store and observes a ficti-tious "marked" price on the article and the sales person simply tells the consumer that the article is on "sale" even though the "sale" is not being publicly advertised, and then offers the article to the consumer for a "reduced" price. Both advertised and unadvertised fake "sales" are high es techniques used to influence the pressure sa consumer to buy now before the "sale" ends. In fact, under either scheme, there is no "sale" and the customer is deceived. The take "sale" scheme has reached epidemic proportions. In our opinion, the fake "sale" is the predominant tool used in advertised and unadvertised "price reduction" promotions in the jewelry indust today. Jewelers who conduct fake "sales" are simply betting that their customers are too stupid to figure out what is going on. We think that is a poor bet. Our experience with consumers con-vinces us that they are intelligent people who are entitled to be treated with honesty and respect. Anytime you encounter a jewelry "sale" employ-ing any of the above characteristics, we suggest that you exercise extreme caution. Bring a copy of the "sale" advertisement or the unadvertised "sale" information to Nebraska Diamond, Compare their so called "sale" prices to our regu lar everyday prices and see for yourself why Nebraska Diamond totally dominates Lincoln's engagement ring and fine jewelry market. The jewelry industry customarily employs several subtle techniques in an attempt to con-

vince the consumer that the quality, quantity or description of the article being purchased is more or better than that which is actually delivered. We think that these techniques are deceptive and improper and that consumers should be warned about them. First and foremost among these techniques is the implementation of spe d lighting conditions designed to enhance the true appearance of any gen stone or article of jeweiny. This usually takes the form of chande-liers, spot lights, flood lamps, and reflector lamps, both incandescent and fluorescent, plus tubular incandescent display case bulbs and other similar type light sources. These light sources are instantly recognizable by their "hor", bright or "intense" appearance. Such lights arti-ficially enhance the appearance, dispersion, scintillation and brilliance in diamonds and, further, they make it impossible to accurately deter mine the GIA color and clarity grade. In other words, these lights make the diamond appear better than it is. While others may argue that the

use of specialized lighting is merely a merchan-dising and display technique, we prefer to think that consumers are entitled to see exactly what hey are getting. As a practical matter, the only eventy store lighting condition which is non-deceptive, that is, which presents the true appearance of gem stones and articles of jewel-ny, is color corrected tubular fluorescent lighting. Even this light, in order to be non-deceptive, must be presented at a low height in a closed and carefully controlled environment, undituded and uncontaminated by other light sources. These are the lighting conditions which are used for laboratory grading of diamonds, and these are the lighting conditions you will find at

C

Nebraska Diamond. At Nebraska Diamond we sell quality jewelry, and we adhere to the philos-ophy that when you sell quality jewelry you don't need deceptive lighting conditions.

THE CONSUMER'S RIGHT TO KNOW The ultimate purpose for the consumer to acquire product knowledge is to enable him or her to separate "fact" from "sales pitch". Your ight as a consumer to know the facts is inequivocal, and should include nothing less

han the following: 1. You have the right to demand that the jeweler accurately grade your diamond in conformi-y with the GIA diamond grading system, that ney fully disclose that grade to you and that ney show you how the grade was determine lever purchase a diamond without such a dis-

 You have the right to examine your dia-mond loose before making your purchase. You cannot accurately observe the color or clarity of a diamond or authenticate its carat weight or letermine that it is not chipped if it is already set nto a ring. Never purchase a diamond that you kamined loose.

3. You have the right to examine your diaond under the lighting conditions used for lab-oratory grading of diamonds, that is, under color corrected tubular fluorescent lighting, presented at a low height in a closed and carefully controlled environment undiluted and uncontaminat-ed by other light sources. Never purchase a diamond that you have not examined under such

lighting conditions. 4. You have the right to examine the color of your diamond in a white color grading trough and to examine the clarity of your diamond under a loupe or microscope, and you have the right to expect the jeweler to point out exactly what you should see. Never purchase a diamond that you have not examined in this man-

5. You have the right to have your diamond weighed in your presence on an electronic dia-mond scale to verify its claimed carat weight. Never buy a diamond that you have not ved in this manner.

6. You have the right to ask any questions b. Tou have the night to ask any questions pertinent to your purchase and you have the right to expect a courteous, informed, accurate and complete answer. Never purchase anythin from a jeweler who shows disrespect for your se anything right as a consumer to know.

### A FINAL WORD

At Nebraska Diamond we've built our reputa-That's why Nebraska Diamond will provide more engagement and wedding rings to more satisfied mers that all of the othe area jev stores combined. Nebraska Diamond is Lincoln's only Engagement and Wedding Ring Superstore. We regularly stock virtually every engagement and wedding ring style imaginable and with each we also include our free Wedding Savings Dedecatily optime becktet which activity Package™ coupon booklet which entitles Nebraska Diamond customers to huge discounts at 30 other area merchants on everyth ing needka Diamond ed for a perfect wedding. At Nebras ve that earning your trust is the most we beli important thing we do, and that trust is earned with quality, service, value and honesty. Our per formance record speaks for itself. Nebraska Diamond has been named "Best place in Lincoln for engagement and wedding rings" for 15 conyears, and we have the highest industry rating of any jewelry store in the State of Nebraska. We look forward to serving you.
