**EXTRACTING TEETH WITHOUT PAIN.**  
As a local anæsthetic, Phenate of Cocaine is the best yet known, and is not followed by any unpleasant symptoms or soreness of the gums. The dental bulldozer who reported that we had ulceration and sloughing of the gums, had he lived in the time of St. Peter, he would have been buried with Ananias and Sapphira! It is the best agent for common use, and entirely without danger. It is only those who use hydrate of chloral in excess that are troubled with ulceration of the gums.

**BROMIDE OF ETHYL**  
Is used much of late, and is intermediate in its effects, between chloroform and gas, and less expensive than the latter.

**CHLOROFORM**  
Is preferable to other agents in most cases where several sore, inflamed teeth are to be extracted at a single sitting. We have used chloroform extensively for over thirty years without accident.

**NITROUS OXIDE GAS**  
generally works well where there is not more than two or three teeth to be extracted, but is more dangerous than is generally supposed, especially when the capacity of the lungs has been diminished by disease or the heart dilated. Several deaths from its use have been reported in medical journals of late. Dental journals do not publish these cases for fear of injuring the trade.

**WASHED ÆTHER**  
has long been used with great success in brief operations, but is not well adapted to prolonged surgical operations. But very few accidents have happened from its effects, and those mostly from its prolonged use.

**The Columbia Standard Bicycle of the World,**

graceful, light, and strong, this product of the oldest bicycle establishment in America still retains its place at the head. Always well up to the times or a little in advance, its well-deserved and ever increasing popularity is a source of pride and gratification to its makers. To ride a bicycle and not to ride a Columbia is to fall short of the fullest enjoyment of a noble sport.
