

What the Profs. Did.

Miss Conklin visited in Indianapolis.

Prof. and Mrs. Burnett spent the summer in Colorado.

Prof. Thurber spent the summer in N. Y. with his family.

Prof. Fosler spent his vacation in Lincoln studying and reading proof.

Prof. Avery taught chemistry in the summer school and then got married.

Prof. Davis rested the first few weeks and then took a hunting trip to Yellow Stone Park.

Miss Bouton did some special work in chemistry and then took an outing in Wyoming.

Prof. Edgren taught French in the summer school and took a two weeks outing in California.

Dr. Leese took a wheel trip to Illinois and then spent the rest of his vacation preparing work for this year.

Mrs. Manning studied several weeks in New York and Boston and spent the rest of her vacation at the coast.

Prof. Candy studied for six weeks at Chicago University, and enjoyed a well earned rest the remainder of the time.

Miss Barr gave special instruction in gymnasium work to the teachers in the summer school and then took an outing in Colorado.

Prof. Swezey spent the summer in special study in the Washburn Astronomical observatory at Madison University, Madison Wisconsin.

Prof. Lucky attended the National Teachers Association, visited in Indiana and spent one and a half months lecturing before the county institutes in Nebraska.

Prof. Nicholson, with a surveying party spent the vacation making a survey of the western slope of the Big Horn Mountains. He reports a most pleasant vacation.

Prof. Bessey spent the first four weeks as head of the summer school. In August he attended the American Association for the Advancement of Science and also the British Association, both at Toronto. He read papers before these meetings on special scientific subjects.

Chancellor MacLean spent the first four weeks working at the university. The following week he went to Long Island and thence to Berkshire Massachusetts. At the meeting of the National Educators association held in Milwaukee he read a paper entitled "The Practical Value of College Education." Later he was at the Agricultural and Experiment station in Minnesota and was appointed secretary of a committee of "Graduate Study" at Washington.

Prof. Caldwell was about the busiest man on the faculty. The first four weeks he taught in the summer school. He then spent four weeks in Chicago and attended the National Teachers' Association at Milwaukee, where he read a paper before the association, and also gave an address before the mid-summer school. Returning to Nebraska he taught in the institutes in Howard and Franklin counties. It would be difficult to find a man more popular with Nebraska teachers than is Prof. Caldwell, and wherever he goes he wins many friends for the university.

Prof. Owens spent the summer in the east visiting all the principal cities and electrical schools in the interest of the electrical section of the Trans-Mississippi Exposition. While in the east he read a paper before the "American Institute of Electrical Engineers," which met in Maine, and also one before the "Society for the Promotion of Engineering Education." He was made a member of the council of the later society. Prof. Owens has been given the management of the Electrical System of the exposition, and reports good success in his work thus far. The work of Prof. Owens will bring our electrical department before the people in a way that will reflect honor upon the University of Nebraska.
