Some very interesting experiments are now being made in the greenhouses with wild plants of Nebraska under the supervision of Mr. G. G. Hedgcock. Between three and four hundred plants have been gathered, are now being cultivated. Strict attention being paid as to the amount of light and moisture. Some of the plants are shaded by frames which are covered with glass and prevent too strong a light from affecting them, while others are exposed to the direct sunlight. It has been found that many of the wild plants of Nebraska on cultivation make valuable greenhouse plants, and it is partly with this in view that the experiments are being conducted. Experiments are also in progress in the cultivation of water plants. Nearly all the crysanthemums are now in bloom. There are some very handsome varieties and it is well worth the time of a visit to see them.

Hanan Shoes

—FOR—

Men & Women

Do You Wear These Shoes?

If not, you are depriving yourself of the luxuries of dress. A badly constructed and poorly fitting shoe has unfitted many for the duties of life. When the feet are properly shod, the brain and nerves are at ease, and the body is prepared for enjoyment and activity.
