

like appearance after the slaughter of their hapless victims. Here and there an empty coop and now and then a stray feather told the story. In the social world there was a briskness that filled the hearts of belles and beaux with delight. People ate their dinners and the cook did a smashing business—in breaking dishes. The troublesome turkey had to be carved, of course. And better than the rest, there was no school that day, and the over-worked student participated in all this fun in common with other people. It was very much like any other Thanksgiving.

—Next term buy your Groceries of Sam English on 11th Street.

—E. G. Clements has purchased all the NEGATIVES belonging to the gallery of V. H. Young and is prepared to take duplicate Photographs from the same at low prices. Students and all give him a call.

—Subscribers whose names are followed by an X, will please take notice that their subscription expires with this issue. We would be glad to have all such renew their subscription at their earliest convenience.

MARRIED—Christmas eve, at the residence of the bride's parents, Prof. Harvey Culbertson to Miss Ruth Hawley. The ceremony was performed by Dr. Weller. The best wishes of the STUDENT will ever go with the parties through life's struggle.

—Wendell Phillips recently lectured in this city, and on the morning following gave the students a short talk in chapel. His advice was general, but the chief topic was in urging upon his hearers to aim to be useful. He urged that usefulness was more desirable than happiness. His lecture was quite a treat, and all the students will ever remember it as a pleasant event.

—THE SCIENTIFIC AMERICAN.—Among the Scientific Journals that come under our observation few appear so valuable as the *Scientific American*. It gives all the new discoveries in the various de-

partments of Science, and their economical applications. And as the dominant thought of this age is eminently scientific, and no cultured man dares to be ignorant of the results of such investigations we do not hesitate, cordially, to recommend the *Scientific American* to the student and the professional man, to the mechanic and the farmer. It comes weekly, has fine engravings or wood cuts, and gives more reliable scientific news at a small price (\$3.20 per year) than any paper that we know. Address Munn & Co., 37 Park Row, N. Y.

—The young lady, who, upon being kissed, exclaimed, "Now you just put that back where you got it!" has arrived in Lincoln. We are glad to make a note of this. It is with no small interest that we have watched her travels. About two years ago she started from New York—we know this to be true, for we read it in a Chicago paper at the time, and soon was in all the eastern cities, according to the newspapers. She got to traveling pretty fast, and sometimes would be in three or four towns the same day. Then we didn't hear of her for awhile. But not long ago she was in Omaha, and then we knew that she was approaching. At last she arrived, and now the story is new around the University, after having traveled the length and breadth of the continent.

—SOCIABLE.—The University Union gave the final social gathering of the term, on last Thursday evening. The attendance was very large, nearly all the students and many of their friends in the city being present. From early in the evening until the closing hour the halls and rooms were filled with a happy throng of young people who were enjoying themselves in a social chat and promenading. Refreshments were served in abundance, and were excellent in quality as well as quantity. The ladies of the society deserve much praise for their efficient labors in this direction. There can be no doubt
