A MERRY GATHERING.

CHRISTMAS CELEBRATED WITH ALL ITS OLD-TIME SPLENDOR BY MR. A. B. HUBERMANN AND HIS LARGE NUMBER OF EMPLOYES.

Mr. A. B. Hubermann, knowing the way to make his employes happy, and feel that their work for him was appreciated, as is usual with him, invited them all with their ladies to a Christmas banquet at his residence, and after a feast of the good things of life, both solid and liquid, presented each of them with some handsome souvenir of his regard and esteem. The boys, some sixteen in number, had already prepared themselves, and as a committee from St. Nicholas in turn presented their employer with a magnificent walnut book case with revolving writing desk. This present, coming from them all, goes to show what appreciation employes can hold toward exployer. The book case was selected to match the already magnificently furnished drawing room of Mr. H., and we know that it will long be to him a rememberance of the happy Christmas of 1881. the elegant Christmas tree was loaded with gifts for all, and everybody went home happy as ever men and women could be after spending such delightful hours. We will wager that each of those employees think their employer the best in the city, and that if earnest work can repay these many kindnesses that he will have it.

OYSTERS by the Pint, Quart or Gallon, at J. H. ELLIOTT'S, dec26-2t 412 North 16th Street.

Dr. Amelia Burroughs, Withnell House, Tuesdays and Fridays, 10 a. m. to 4 p. m. tf

FISH CULTURE.

Description of Colorado's New Fish Hatchery.

Something of the Process to Be Used in the New Institution.

Denver Tribune.

At the last session of the legislature, a bill was passed, providing for the establishment of a fish hatchery, and the sum of $2,500 was appropriated with which to purchase the necessary ground and erect the buildings. For the expenses of running the first year, ending June 1, 1882, the further sum of $3,500 was appropriated, and for the second year, ending June '83, the sum of $3,000.

This is what Fish Commissioner Wilson E. Sisty had to begin on, and he went to work with the vim and energy so characteristic of him. The governor, under the bill, appointed commissioners to act with Mr. Sisty in selecting a site, and a general prospecting was indulged in. Limited in means, the gentlemen were obliged to be cautious, and it looked for awhile as though a suitable locality could not be procured and have a sufficient balance of the appropriation to erect the building. But Mr. Wilson Waddingham came to the relief of the almost discouraged committee, and offered ten acres of most desirable land as a donation to the state for the purpose required. It is needless to say the offer was promptly accepted after examination of the ground.

This was in August, and immediately Mr. Sisty went to work to arrange about the building, and the water supply. The grounds are 8½ miles from Denver, down the Platte, though distant from it to the east about three-quarters of a mile. The surface is irregular, that is composed of both high and low ground, from the former of which bubble up in the lower places, innumerable springs of clear, cold water. A slough, formed by springs, furnishes an excellent outlet for all waste water, as well as providing ample ice in the winter, which can be stored for summer use.

The building is an unpretentious little frame, painted that dark metalic red so much used by railroads on their section houses, etc., a doorway in the front end, with a window on either side; to the left bluffs rising steeply up to the mesa above, and to the right, fringed by a dense growth of bushes, the slough before referred to secured in icy fetters.

The operating room is 22x35, in which eight double troughs slope from the northern wall, leaving but a passage way at their bottom ends. The troughs are each 15 feet long, 11 inches wide and 6 inches deep, and are arranged in pairs, making in all eight double, or sixteen single ones. Their bottoms are covered with cement, on which, after hardening, is laid on a thin layer of clean gravel, being washed downward. The pure, clear spring water is brought in a pipe from the stone basin, a few paces off from the building, and is then turned into the troughs, escaping through an outlet below and being discharged into the slough. A constant and never varying thin sheet of water is thus kept gently gliding over the riffles and across the gravel in every trough.

To commence operations with Mr. Sisty has bought 400,000 eggs of eastern brook trout, securing them from W. L. Gilbert, of the Old Colony trout ponds, at Plymouth, Massachusetts, at $1.75 per 1,000. Two hundred thousand of these eggs are expected next Wednesday, and then the real work of the hatchery begins. It may be interesting to the general reader to peruse the following running account of the business of fish culture, as detailed to The Tribune reporter yesterday, by Mr. E. V. Bogart, the gentlemanly and courteous superintendent:

When the eggs are received on Wednesday, they will be put into the troughs, resting on the gravel beds. They are already vivified before shipping. The eggs will be a trifle larger than the head of a pin, and every day they must be looked over carefully, and all the dead and diseased ones be removed. The condition of the egg is told by its color. If healthy, it will be white with two little black dots, known as "eye spots" upon it; if dead, it will be of a pale, milky white, and without the spots. The change of temperature which the eggs will experience in coming out here, may so force their growth that they will hatch the next day, but this is not anticipated. Had they been spawned here, the period would probably be forty-five days, but this shipment is expected to hatch in from fifteen to twenty days after arrival.

Having hatched the young fish resemble hairs with a minute bag on one end known as the yoke sack, and which contains all the food they will require until able to feed like any well-regulated member of the finey tribe. Now, particular care is taken with the water to see that it is free from all impurities and that the supply is regular and sufficient. The temperature of the water will be kept at about fifty degrees. Yesterday it was fifty-four, and by means of ice, plenty of which is at hand, it can be reduced to 48. Should the eggs have been overheated in their journey out here, a large number will die, the percentage running all the way from five to fifty. Then again some fish are born with crooked spines, which prevents them from ever feeding, and consequently they die. As soon as one dies a fungus kind of a growth takes place, and unless the egg is immediately removed it will disease another and it in turn will die.

In about thirty to thirty-five days the young fish drops its yoke sack, sports a set of fins and paddles around in good style. It is then about from half an inch to an inch and a quarter in length, and is a perfect fish in everything save age and size. Now is the time that those which are to be sent to the various parts of the state to stock the streams with are placed in the iron casks for shipment. Those that remain must be looked after for two or three months, at which time they have grown to an inch and a half and two inches in length. Four times a day they are fed, on a mixture composed of two parts grated beef liver and one part milk. A pint cup will hold a day's food for all the fish that can be kept in the sixteen troughs of the Colorado hatchery. The idea is to give just sufficient food, so that the fish will eat it, and not allow it to settle on the bottom and render the water impure. As soon as the fish are old enough to be fed, the gravel in the troughs is removed, and the water backed up sufficiently to permit the little creatures swimming backwards and forwards the whole length of their quarters regardless of the riffles. Care must be taken that too many fish are not crowded together, else general fighting ensues, and the weaker ones "go to the wall." At first the fish will take their food only as it falls through the water, and not touch it if it reaches the bottom, but after a little they get over this and eat it wherever they can find it. When this occurs they are taken out and placed in the stock ponds outside, where thereafte they must "rustle" for their subsistence.

These stock ponds, of which Mr. Sisty has but one just now, although others will be built immediately, are always made with muddy bottoms, so that the fish will not spawn in them. Trout are particular, and they want nice clean gravel in which to lay their eggs. When the spawning season arrives, which is when the fish is about two years old, the spawn of the first year not being considered good, a trough with gravel on its bottom, is placed in the pond, and shortly the fish enter it. They always enter in pairs, the female leading. Then the operator seizes the female, and by gentle pressure obtains all her spawn, catching it in a pan. The male is then put through the same treatment, its milt being dropped upon the spawn obtained; the fish are thrown back into the pond, and the eggs are placed in the hatching house and the process begins.

A trout will yield from 500 to 2,500 eggs, and do this every year up to eight or ten, which is about their duration of life. Barrenness sometimes occurs, from reasons unknown. They are subject to diseases, various various kinds, but almost all traceable to dirt—not mud, for that is considered a good remedy for fish sickness. Let a lot of fish get weak and sick, and they are immediately put into muddy water. It purifies them, and they generally come out reinvigorated and as bright as as a new dollar. Trout generally spawn between October and February in the east, but in the mountains the colder water puts the season off until about from March to June.

In a general talk with Mr. Bogart, he said that trout and salmon and bull-heads (a species of catfish) were among the best varieties for the mountain streams, while for sluggish waters, ditches and lakes he deemed the German carp undoubtedly the best fish. In the single stock pond now on the grounds Mr. Sisty has twenty-three German carp, which were put out last June. They are liable to spawn this coming summer, and the stock will be materially increased. It is intended that next April the first distribution of fish will be made. It will be of the trout variety. Mr. Sisty has now twenty-four iron cans, tin lined, to be used in shipping the young fish. They will hold from five to fifteen thousand each, according to the size of the fish and the distance they are to be sent.

FACTS THAT WE KNOW.

If you are suffering from a severe cough, cold, asthma, bronchitis, consumption, loss of voice, tickling in the throat, or any affection of the throat or lungs, we know that DR. KING'S NEW DISCOVERY will give you immediate relief. We know of hundreds of cases it has completely cured, and that where all other medicines had failed. No other remedy can show one half as many permanent cures. Now to give you satisfactory proof that Dr. KING'S NEW DISCOVERY will cure you of Asthma, Bronchitis, Hay Fever, Consumption, Severe Coughs and Colds, Hoarseness, or any Throat or Lung Disease, if you will call at J. K. ISH & MCMAHON' Drug Store you can get a trial bottle free of cost, or a regular size bottle for $1.00. jan16ly(2)

ENTERPRISE AND PLUCK MUST WIN.

Knowing of the immense crowds that have filled Messrs. EDHOLM & ERICKSON'S spacious wareerooms during the busy days previous to Christmas, we dropped in this morning expecting to find their stock badly demoralized, but instead everybody was rustling around making room for an immense stock of New Goods that were arriving to fill all the spaces made by the withdrawal of the so many fine goods which have gone as Presents to both the brave and fair, and many hearts that beat so gladly over the elegant souvenirs presented, will be able to make the return presents from the same elegant and choicely selected stock. For before you get up to-morrow these enterprising gentlemen will have their store again filled with the Chaste and Beautiful, the Elegant and Unique Goods for which they have become so celebrated.

Fresh Invoices of Dimonds, Jewelry, Silverware and Music Boxes, will be unpacked to-night and placed on exhibition to-morrow. They have been selected as to their adaptability as New Year Presents.

Respectfully,
EDHOLM & ERICKSON.

HERE'S WHAT I WANT

HOSPE sells motto frames for 20c.
HOSPE sells 8x10 frames for 15c.
HOSPE sells 24x30 chromos for 85c.
HOSPE sells 22x36 paintings for $8.50.
HOSPE sells engraving from $1.50 to $3 50.
HOSPE sells organs from $50 up.
HOSPE sells pianos from $150 up.
HOSPE sells mirrors cheapest in town. d7-tf
