AGRICUL CURE.

Does Corn Pay? A writer in the North Bend Bulletin discusses the profits of corr, as a crop when put on the market in the natural state. The average yield of

Seed Harrowing once and cultivating three times.
Husking and cribbing.
Rent or interest on land.

that an average of 30c per bushel must be obtained to make it a profitable crop, unless marketed in the believes, from a series of experiments at the Iowa agricultural or chard. shape of beet and pork.

Broom Corn. J. H. Bartel, of Harlan county, teresting facts concerning this important crop. Experiments in its culture in various counties in the been very successful. The price of the brush is good, yielding last year over eleven dollars clear profit per acre, while this might have been greatly increased by a different manner of working. The seed also should draw the attention of the farmer as a good substitute for corn. The yield is about the same or a little better. And if some enterprising capitalists should engage in the manufacture of brooms t would greatly enrich them, and they would ever have one of the best

of markets—the west.

The work about broom corn is nearly-all done by hand, thereby, doing away with expensive machinery and employing plenty of laborers, this, of course, can only be a benefit to a community.

very hot weather will curl the brush have a very reasonable assurance of when young and tender and make it choice and perfectly hardy bearing rough, which grades it lower in the trees at no very distant day.

roarket. This will be avoided by early planting as the brush will have that we shall yet secure from northto form in the cooler part of the sea-son. After the formation of the brush—broom corn will stand per-hrush—broom corn will stand per-He comes to these conclusions not than any other plant without injury pomologist, but from comparing views —-it will look fresh and healthy when

Care should be taken that the soil planting. It will be well to cultivate

Nebraska Cows.

Hubbard Hart, of Blackbird, Burt county, claims that Nebraska can dis-count Iowa in the butter making line. A farmer in the latter state boasted of having made 1,920 pounds of butter from the milk of ten and one-half oows, two of them two-year old heif-ers. Mr. Hart says: We milked eight cows through last season, three of them heifers, and raised eight nice calves and made 1,540 pounds of but-ter from them, which, if I can figure correctly, bears a balance in favor of the Nebraska cows of a fraction over five pounds to the head. Best Means of Testing Seed Corn.

Cenry Wallace in Winterset (Ia.) Chronicle. If our farmers would avoid some of the mistakes of last year, they will test their seed corn. The amount of seed necessary is so small that no one can afford to have the slightest doubt of its vitality. The only way is to test it by planting it in moist earth and keeping it continually moist in a warm place. Some corn will grow, but so feebly that it should be rejectially their first-born. ed. There is high and low vitality in Chicago & Northwestfor seed. But there is another matter of equal importance. There are breeds of corn as well as ive etock, and the farmer is wasting his time woo grows scrub corn. There is a vast field for research in the matter of grain breeding, and, whilst the or-dinary farmer has neither the time nor the facilities for experimenting largely, he can at least select varieties that are adapted to the climate and that gives promise of vigorous yield an I note the results. Sometimes there is great improvement by change of soil and climate. Last year we planted two kinds of corn, both claimed as thoroughbred, side by side.

The one was raised nearly one hundred miles north, the other nearly as dred miles north, the other nearly as far south. The results were largely in favor of the southern corn, and yet more than double the water which we believe had the season been different it would have been quite the ter requires no cooking. reverse. The northern corn accus-

the dry season.

About twelve years age we brought some corn from the old home farm in Pennsylvania, and planted it in Cedar county, Iowa. The season was very natural state. The average yield of dry said the result was a surprising corn in Nebraska has been thirty-six bushels to the acre, and the average in the whole neighborhood. Last tall price about eighteen cents, which we selected some varieties that pleased would make the product worth about us from the same place, and will re-\$6.50 per acre. Now let us see results. We throw out these suggeswhether it pays to raise corn in Ne- tions, which we know are in the line of thought of a good many of our best farmers, and we hope there will be such wide experimenting with various kinds of corn as will furnish a basis for further progress another

year. How to Start an Orchard. Prof. J. L. Budd, the distinguished professor of horticulture in the Iowa Agricultural college, gives the follow-ing advice as to the best varieties of that there are many varieties of Russian winter applies which will grow luxurian by and bear profusely throughout all that part of the countries is looked for. try known as the northwest. Coming from a very high latitude there is no apples. Their leaves are thick and strong and remain on the trees until

they are fully ripe, so the trees are calculated to endure all the extremes of heat and cold in this climate. Many of the varieties are very deviable, as well for cocking or eating at home as for market purposes. Our best summer cooking apple is the Duchess of Oldenburg a Russian variety, -which may be eard to have no equal among any of the varieties grown in the west and northwest. The Haas, or Gros Pomier, is not surpassed in hardiness by any can be procured by crossing a bantam variety known in this lattitude. In rooster on ordinary common hens. fact, we believe it is itself a Russian They are not large, but of good qual variety. Its wood remains white after the ecverest winters, when most of our other fron-clads are either blacka year or two it will be easy to secure Time of planting ranges from the sections of the Ressian winter apples at twenty-fifth of April to the tenth of many of our nurseries or from the ex-May, and on old ground. We all perimenta grounds of our agricultural know that this country is subject to colleges. Let these be top-worked hot winds in the summer season, and apon the Gros Pomier and we shall

haps, more hot weather and drouth only from his own experience as a corn is wilting. A good crop can be telligent and experienced men in had from late planting; even as late northern Europe.

Another idea was gleaned in this

conversation with the intelligent prois well pulverized and smooth before feesor which we will set down in this planting. It will be well to cultivate place, though it pertains to timber or plow the ground shortly before, in culture and not to orchardry. It is A Cure Guaranteed.

Dr. E. C. West's Nerve and Brain Treatment—

One box will cure recent cases. Ea h box contains one month's work for me. I used the largest pincure recent cases. Ea h box contains one month's all the seed was good. The seed is a box or six boxes for five dollars; cent by mail propals on receipt of price. We guarantee six boxes to cure any case. With each order received by us for alx boxes, according to the property of the case of the maple, but it belongs to the poplar variety. It is easily grown—in fact, once established can hardly be killed out. Standing with each order received by us for alx boxes, according to the property of the manufacture and if not all good more with each order received by us for alx boxes, according to the property of the manufacture and if not always are the Abele or silver poplar—sometimes though incorrectly called silver maple. The leaves are shaped like those of the maple, but it belongs to the poplar variety. It is easily grown—in fact, once established can hardly be killed out. Standing with each order received by us for alx boxes, according to the property of the manufacture and it has done excellent work for me. I used the largest pinciple of the manufacture and it has done excellent work for me. I used the largest pinciple of the manufacture and it has done excellent work for me. I used the largest pinciple of the most valuable species of timber for forest culture is the abeliance of the most valuable species of timber for forest culture is the abeliance of the most valuable species of timber for forest culture is the abeliance of the most valuable species of timber for forest culture is the abeliance of the most valuable species of timber for forest culture is the abeliance of the Abele or sil order to keep the weeds down. The this That one of the most valuable planted, and if not all good more alone, as it does when used as an orshould be planted. One good seed to namental tree, it is apt to threw up every three inches will be about right. The seed should not be planted too deep; from one to two inches is deep enough. The ground should be well smoothed in order to get the seed all one depth. This is necessary to little or no trouble with the suckers. make the crop come in ever and ma- The best part of the matter is that make the crop come in ever and mature at the same time. Sod will produce a good crop, probably not as large a yield per acre as old ground but quality just as good; if planted early it will be a sure crop. It may be planted in hills three fact each way and from three to five good seeds in a bill. The sod should be broken early and about three inches deep and the seed planted with a spade. Ten acres put in this way will yield more than thirty acres planted any other way. It is impossible to secure a seed at the same time. Sod will produce that the same time. Sod will produce the same time to the same time to the same time to the same time. The best part of the matter is that it is a rapidly goowing, beautiful time ber tree, which makes very good boards — almost equal to pine for most purposes, The wood also takes on a very beautiful polish. The tree is perfectly healthy, grows rapidly and takes care of itself it would be a capital idea to plant it is groves, along hillsides, or apon any waste or cheap land. Probably it would be exceedingly well on lands from which other times. way. It is impossible to secure a away. It will grow from cuttings, good stand by drilling on sod or plant- and when the trees have been cut ing with a planter, unless the sod is pulverized, and this is hard to do. The spade is to my knowledge the best machine to plant with, on sod.

and when the trees have been cut down the roots will send up shoots enough to occupy all the vacant places. From all this we conclude that the Abele is a species which forest cultivators cannot afford to over-

General Items. Keokuk, Ia., claims distinction as the biggest egg market in the world;

10,500,000 eggs were shipped from there during last season. About 140 exiled Jews in New Orleans have organized the first agricultural colony of Russian Israelites in America, to act as a pioneer for members of the race driven from their homes by Russian persecution.

Fowls of all kinds should be taken to their new quarters before they lay their first eggs. They should become accustomed to their new surroundings and companions some time before they begin to lay. Animals of all kinds should be removed some weeks before the females drop their young. It is dangerous to move them long distances near the time of delivery, and there are some objections to moving them afterward. Cows, mares and sheep are attached to the places

The tubers of sweet potatoes are not planted as in the case with common potatoes. They are propagated he prouts are from six to eight inches long they are of a mze to set out. They need not be started earlier in this latitude than May, and should not be transplanted till the soil and air become quite warm. The soil for this crop should be quite rich and pretty dry. It need not be plowed deeply, but should be well pulverized. If it is made reslow to a great depth the potatoes will be likely to grow long and spindling.

The value of cheese as a food is not producers; beef, however, contains more than double the water which

tomed to a shorter seavon ripened early, whilst the southern corn, accustomed to a longer growth, made the most of the best brands of home manufacture, rope where it is relatively as high as the best brands of home manufacture, the epicurean citizens of Brazil do not accord is the same position. In Rio Janeiro the Danish and French butter has the preference.

One day last week a single freight train brought out of Northern Nebraska fat cattle to the va'ue of \$26, 000. The cattle were consigned to eastern parties.

A new use for sorghum seed has been discovered. Glucose can be made from it as well as from corn. and it is estimated that 1,250 pounds can be made from the seed grown on one acre. It is hought that the discovery will, by the added profits arising from the sale of glucose, make the culture of sorghum for sugar a profitable business.

W. H. Allen, a stock man at Equalty, Neb., objects to the assertions of ratiroad circulars and local papers that western Ne raska is a good farming country, but as a stock raising This does not include hauling to trees for a young orchard: Plant the country it has no superior. The real market. Experienced farmers assert Gros Pomier or Haas, largely, in fact, objection is that the farmers are objection is that the farmers are crowding the ranches and curtailing the size of the range.

A bill to establish a bureau of animal industry, to prevent the exporta-

Nothing adds more to the appear ance of a farm-house than a broad doubt of the perfect hardiness of those plat of luxurious green grass, upon which care and taste are displayed. It is at ence a pleasing sight, and can be made a profitable investment. An Indiana inventor has patented a

> straw-stacking machine. Sorghum seed is readily eaten by poultry, and is better for small chick ens than corn

Prices asked by American breeders of pure bred Polled Angus cattle are as high as \$850 for cows and \$1,500 for bulls. Plump and very saleable chickens
