AGRICULTURE. York County Crop. The acreage of flax in York county, says The Tribune, this season will not be one half as great as last year. This crop paid very poor returns, and many farmers are discouraged with it. The acreage of wheat will also be less than formerly, while that of corn will be greatly augmented. Quite a large number of our farmers are getting a nice little start in stock. branches drooping. The Mennonites a beautiful hedge, and stands shear-ing as well as any tree. Professor Budd, of the Iows agricultural col-lege, says it is propagated more readi-greatly augmented. Quite a large number of our farmers are getting a nice little start in stock. branches drooping. The Mennonites a beautiful hedge, and stands shear-ing as well as any tree. Professor Budd, of the Iows agricultural col-lege, says it is propagated more readi-greatly augmented. Quite a large number of our farmers are getting a nice little start in stock. branches drooping. The Mennonites a beautiful hedge, and stands shear-ing as well as any tree. Professor Budd, of the Iows agricultural col-lege, says it is propagated more readi-bud, form cuttings than any mulberry with which he is acquainted. The Mennonites have interested them-selves in the silk business to some ex-tent, and have some eccoons for sale. If parties are sufficiently interested to make further inquiries they can ad-it parties are sufficiently interested to make further inquiries they can ad-tures G, F. C. The Grape R. A. Hawley writes to The Sutton Earl Register that no fruit is more sure Philadelphia Becom and none more profitable than a thrifty grapevine. Farmers can as well have an acre of grapes as an acre of other crops so far as trouble is con- front. It may be inferior to some of or outlings of the Concord variety and with ordinary care success is assured dimeter of the reliabil-tion outlings of the Concord variety and the reliabilin our Nebraska soil and climate. a very unfavorable season, indeed, Grape vines should not be allowed to when they do not reward the grower

grow like a rose or a currant bush, all in a mat, but carefully tied up on a wire fence, or other trellis, or even fastened to the side of a building. In a mat, but carefully tied up on a for his trouble. Another peculiarity is that when the tops are dead the potatoes are there, and this cannot be maid of all others. The Peachblow, Allow but two or three vines to grow from the same root and if trained to stakes one is enough. This plan gives the vines room, air and sun-times they show no signs of tubers shine, which they must have. Prun- until almost at the period of maturity ing is one of the most important items connected with the business. Every vine that is allowed to grow should be closely pruned every year, in the to beat as a late variety. The bugs winter season or early spring, before the sap fisws, to prevent bleeding. Let the main vines grow in length as far as they are strong and cut off every branch within an inch of the joint. This will be all they will need in the way of pruning, and is much better than summer pruning, which joint. This will be all they will need in the way of pruning, and is much better than summer pruning, which scalds the vines by the hot sun being let in too suddenly. Plow or cultivate every spring between the rows and then mulch with old straw to keep down the weeds and the ground moist and cool, and you will have grapes in abundance. The grape vine produces all the fruit and foliage on the green is branches which will branch out from every point in the spring. How to Graft. Germantown Telegraph. The cherry tree can be grafted now,

Germantown Telegraph. The cherry tree can be grafted now, as the sap of this tree begins to run early, and there is small chance of a cherry scion growing after this has taken place. The apple and pear can be set at any time up to the middle or even end of May, if the scions have been carefully preserved and have not yet started to sprout. There is no danger of a graft not growing if the stock be split so that so that the bark shall not be bruised, and shaping the shall not be bruised, and shaping the scion wedge fashion both ways, preserving also the bark uninjured, and placing the rim of the wood of both stock and scion exactly together, or at least crossing each other so that

the sap can intermingle. We prefer wo eyes or buds to a graft, and would rather have only one than more than wo. One year's wood should always be used when it can be obtained, as it s more certain to take and grows may not be the same. A western

Early Potatoes.

found exceedingly convenient for fill-ing vacancies and making additions. Such management will not be robbing the nurserymen, for the man who thus becomes practically interested in fruit raising will be much more likely to apply to nurser es for additional supplies, than he who gives no attention, and has no knowledge of the fine fruits. The additional information derived from books and periodicals, will enable any one to bring around him the trees and plants which will afford him a supply of delicious luxuries through the yearly circle. Such a circle will begin with strawberries peaches and plums by the 1st of August, and later sorts for more than two months afterwards; pears from August to the following March, grapes for nearly the same period and apples through the entire circle.

General Items

A flexible paint for canvas is made as follows: Yellow soap, $2\frac{1}{2}$ pounds; boiling water, $1\frac{1}{2}$ gallons; dissolve; grind the solution while hot with 125 pounds of good oil paint.

It requires about 5,000 young fish to stock a pend of one acre in extent. Of fish weighing from one to two

Reports from the gree peach-grow-ing districts represents the prospects should be broadcasted after the good is in on heavy ground or scattered on of the coming, peach crop as univer-sally favorable. The grovers of New-Regarding the new varieties, it is best to procure only a pound for ex-periment. Try them side by side with old-established, well-known vari-eties. The reason is that no farmer can recommend to another at a dis-tance which is the more preferable variety, as soils and other conditions may not be the same. A western Regarding the new varieties, it is variety. as soils and other conditions is more certain to take and grows more vigorously, and the graft should be cut from bearing branches. We wish to remind those preparing grafting wax, that we have found four parts of resin consumpt of heave found four
