GUST, FRIS & CO 1212 Harney St., Improved Ice Boxes, Ice and Wood Furnaces, Office and Residence. Pine and Walnut.

PAVING. ROSENFIELD, 15th St., bet. Far. & Har.

THE COMING GREAT COMET.

Some Speculations These Erratic Wanderers Excite.

New York Sun.

If the comet that was discovered by a young astronomer in Albany a week ago fulfills half of the promises made for it, we may expect to behold, in May or June, a celestial spectacle such as has not been equaled since 1858 or 1811. This comet, although some 200,000,000 miles from its perihelion, which it will not reach for three months, shows a bright tail and a star-like nucleus. The inference is fair that the comet is a very large one, and that when it gets into our neighborhood it will present a magnificent appearance.

Moreover, Professor Chandler's figures show that the comet is plunging almost straight at the sun, which it will probably approach within 100,000 miles. The only other comets in the long list of those bodies whose orbits have been calculated, which approached anything like as near to the sun as this are the comet of 370 B. C., the comet of 1068, the comet of 1880, often called Newton's comet, the comet of 1843, and the comet of 1850. The last named was observed only in South America and Australia and at the Cape of Good Hope.

Concerning the comet of 370 B. C., of which frightful things are related, and which is said to have split in two, not much is known, but the measurements made in the other cases are generally to be depended upon. In fact, it is the nearness of this approach to the sun, and the fact which led Newton to anticipate possible peril to the earth from the fall of a great comet into the sun. This is not the popular view of the danger from comets, the fear usually being that they may strike the earth, or produce pestilence by minding the substance of their tails with our atmosphere.

Of late the other view has been made more conspicuous, especially since Mr. Proctor's recent article on what he called the "narrow comet of 1880," which he anticipates will be a great comet into the sun. This is not the popular view of the danger from comets, the fear usually being that they may strike the earth, or produce pestilence by minding the substance of their tails with our atmosphere.

apparently well in other respects. In a few days, however, he began to feel restless and morbid, although he tried earnestly to overcome the feeling which had taken possession of him. But try as he would the shadow of some evil seemed to follow him, and he was conscious of a gradual sinking and wasting away of all his physical faculties. He had been an earnest and diligent worker, and in his zeal frequently over-taxed his strength, and being absorbed in his duties, failed to observe the common symptoms with which he was afflicted, thus permitting the work of destruction to go on unheeded. But the end finally came in a most peremptory manner. Shortly before his death he wrote a letter—the last one he ever indicated—which he speaks as follows: "A belief that death is near affects different minds differently, but probably all who are in a fair condition of physical and mental strength instinctively shrink from it with an indefinable dread and horror. A dying man is no more able of himself to foresee his own destiny or the destiny of those he leaves than he was before he began to die."

The recent and sudden death of Clarkson N. Potter is one of the most serious warnings ever given in the long list of innumerable cases of fatal neglect. It is not sufficient to say that many other brilliant men, including Everett, Sumner, Chase, Wood, Wilson, and Carpenter, were swept away by the same fatal trouble. The question is, were these men sufficiently careful of their health, and could they have been saved? The Albany Argus, in speaking of Mr. Potter's sudden illness and death, says:

"One of the physicians who attended Mr. Potter here was interviewed last evening. He stated that Mr. Potter's inability to converse had for some time served to baffle the physicians in their efforts to determine the root of his illness. It seems, however, that Mr. Potter, some two years ago, suffered a slight attack of kidney disease. Unwise dependence upon a robust constitution and naturally perfect health, and neglect of proper clothing, doubtless sowed the seeds of disease that needed but such personal neglect as that of Tuesday morning to develop. From the symptoms at first shown, it was thought that his only trouble was nervous prostration; but his long continuance in a semi-unconscious state led to the belief that his illness was more mysterious and dangerous."

Up to the latter part of last year Mr. Edward F. Rook, a member of the New York stock exchange was doing business in Wall street, New York. He had everything to encourage him, and made life happy, but was the victim of unaccountable uneasiness. His experience as described by one who knew, was as follows:

"At unexpected times, and on occasions when he was in the greatest reason to feel joyous, he was writhed and haunted with strange feelings of discontent. He endeavored to check these feelings and appear pleasant, but it required a great effort to do so; after which he would again relapse into his former morbid mood. This feeling continued for a number of months, when he became conscious of an added sensation of lassitude. He was tired constantly, and yet always weary. He had an intense appetite one day and very little the next. His pulse was irregular, his breathing labored, and every moment of existence was a burden. These disastrous symptoms continued, his face and body became discolored, his heart was irregular in its action, and his breath came in short, convulsive gasps. He grew constantly worse, notwithstanding the most careful ministrations of his friends, and finally died in the greatest agony. After his death an examination as to the actual cause was made, when his brain was found to be in a perfect condition, and the reason of his disease was of an entirely different nature."

The experiences which have been cited above all had a common cause and were the result of one disease. That disease, which so deceitfully, yet surely removed the man above mentioned was Bright's disease of the kidneys. In the case of Mr. Rook the examination after death, while showing the brain to be in perfect condition, revealed the terrible fact that he was the victim of a slight kidney trouble, which had gone on unchecked, until it resulted in acute Bright's disease. The leading physicians and scientists of the world are fast learning that more than one-half the deaths which occur are caused by this monstrous scourge. It is one of the most deceitful maladies ever known to the human race. It manifests itself by symptoms so slight and common, as to seem unworthy of attention; and yet these very insignificant symptoms are the first stages of the worst complaint known in the history of the world. Thousands of people have died from troubles that are called heart disease, apoplexy, pneumonia, brain fever, and similar diseases, when it was, in fact, Bright's disease of the kidneys. The ravages of this disease have been greatly increased from the fact that until recent years no way was known to prevent its beginning nor check its increase when it had become once fixed upon the system. Within the past two years, however, we have learned of more than four hundred pronounced cases of Bright's disease many of them much worse than those above described, and most of whom had been given up by prominent physicians, who have been completely cured. The means used to accomplish this end has

DIRECTORY OF LEADING WESTERN HOTELS.

Table with columns: HOTELS, PROPRIETORS, TOWNS. Lists various hotels and their owners across different western towns.

THE JELM MOUNTAIN GOLD AND SILVER Mining and Milling Company.
