

PERSONALITIES.

The president is wearing a tall white hat. Victor Hugo has become so deaf that he can not enjoy conversation.

W. E. Chandler is a shrewd nose man with a bright eye and retreating chin. It is reported that Gen. Abner Buford will start a "Christian Army" paper at Louisville.

Oliver Logan says Bernhardt's husband is highly kissable. Mr. Bernhardt's opinion of Olive has not been made public.

The woman who wants to change her name and become Mrs. Von Bulow, wife of the pianist, is Maria Amalia Katharine Josephine Schaefer.

Mrs. Scoville has accomplished a smart thing during the past fortnight. She has kept her mouth shut and her family matters out of the papers.

Don Cameron should not talk of abandoning public life. It is little less than a success in politics.

Anna Dickinson says there are not three men in this country who can play Hamlet. Anna is evidently feeling kinder toward the men this summer.

Oscar Wilde pronounced Miss Alstair Allen, of Montgomery, Ala., the most beautiful young lady he had seen in the United States. --New Orleans Times.

Two policemen accompany Mr. Gladstone to church every Sunday. It looks as though Mr. Gladstone would not be over 6 to 10 on an over ruling Providence.

Among the notes at Long Beach, Road Commissioner Hayes, of Fremont, O. Mr. Hayes will be remembered as having resided in Washington from 1879 to 1880.

Miss Corson, the cook and lecturer, held that oatmeal and beef-stein soup is all the food that man needs, but as for her, she wants fried chicken and four kinds of cake.

The Illinois prohibitionists are so mad at Green B. Rum, the commissioner of internal revenue, that he was repeatedly referred to in their convention the other day as Green Brandy Rum.

Adam H. Hopock, a negro who claimed to be over 120 years of age, was buried at McKinney, Tex., on the 1st inst., his funeral being one of the largest ever held in that town since a good, steady liar is always respected in Texas.

M. De Lesseps is a good deal of a man, but he is not one of the powers of modern Europe. If the old gentleman would save the canal he constructed for the British, he should go home and become caud.

A Polish woman, a fresh importation, told a Milwaukee directory canvasser her name was "Sullivan." He asked her to spell it. She couldn't; but brought him an envelope directed to her. It was "Mrs. Czylawezwanz."

It is authoritatively announced that Mr. Vennor, the weather man, is wrestling with an attack of Maine rheumatism. Mr. Vennor, after setting up the pins for some damp, had weather, didn't have sense enough to come in when the rain began, and as Maine is a prohibition state, they call it rheumatism.

Honoree Greeley's famous stage driver, Frank Monk, is now employed on the proposed line of the Northern Pacific, in Montana. A particularly bold but inexperienced road agent undertook to stop him.

"Plunger" Walton, the horse racing gambler, has concluded to try a whirl on Wall street. The "Plunger" has notified his partners in the new business that he will do all the speculating in stocks, gambling in grain, cotton or petroleum, betting on horse races, playing poker or matching pennies for the firm.

Walton is evidently a very keen man. Sir Garnet Wolseley, who has just gone out to take command in Europe, is very quick and brisk in his ways, with a trim military appearance, and great readiness of adaptation to change of circumstances.

His possession Napoleon's faculty of taking a "plunge" the measure of a man, and knowing how best to use his ability. He has succeeded in every position in which he has been placed. Like Sir Frederick Roberts, England's other great general, he is an Irishman from near Dublin.

SOUTHERN INDUSTRIES.

By Hon. Cassius M. Clay. I am tired of hearing the depreciating cry of "We want Yankee brains and enterprise." We don't any such thing--we want southern brains and enterprise. What the south wants is common sense and action.

The old ruling class was not, and is not, a more inefficient class than the same strata in New England. On the contrary, history shows that when we applied ourselves to the thing in hand we excelled the north. We had more good statesmen and orators than the north. Our military men were the foremost.

In manners and taste the south, with all her smaller cities and sparse population, was at least equal, and abroad held superior, to the north. In physical development they are, and have been, superiors of the north. Slavery prevented manufactures and commerce, and interfered with common education, and therefore, was a block to most of the progress of modern civilization--mechanic arts, roads, buildings, ships, and all that. It prevented inventions and the intelligent use of the methods already known. It warred against economy and self-restraint. But slavery is gone, and gone forever, and the road to progress lies full and free before us.

RESOURCES. If we take the old slave line as the border of the south, we have a larger and better surface and soil than the north and also better claims. We are the place of the great world staples, cotton, corn, maize, tobacco and rice. There are vast fields yet to be occupied with the sugar cane. The cotton and all these other staples should reach their highest preparation for consumption here. We have all the minerals of the world.

We have the climate for the best peaches, apples and cherries, not to speak of the orange, banana, lemon and the watermelon and many small fruits. The vine and silk culture must succeed here, if anywhere in America. The south has the best timber; the wood of the sunny climate is firmer, stronger and more varied than in the north, and its growth more rapid. When forestry becomes an art and culture, as it will, the south will be the place of its highest success.

places, our extravagance in household and personal decoration? We have enough to begin with, and more will join us if need be, as in our new cotton factories.

WHEN TO BEGIN AND HOW. We should begin with the manufacture of such of our staples as maize, wheat and oats, in distilling and in grinding--in wool as well as cotton.

We should move slowly; first crawl, then toddle, then up and away as a boy and man! Let all the talkers of a city, and village, and cross-roads, get together, and "strike out" by forming a joint stock company to make horse-shoes, hoes, axes, especially the wooden parts of the same. For this the best machinery known should be used, to save the expenditure of the labor.

Much of this must be imported--import also the skilled men to operate it at the beginning. Everywhere let one intelligent man study the surroundings. At one place hoe-helves, snoods, chisel and axe-handles and all that is best; at another coal mining, slate, clay, and such industries as are proper; staves, railroad ties and barrels.

THE BEET. I return again to the beet, for it must at some time rival cotton. The beet has not been a success in America, because it has been grown too far north--the South is the place. The company should start on a small scale, raise some beets themselves, engage others, send prudent men to France and other countries to study their machinery and methods, and then enlarge operations only with successful experience. I stake my reputation for judgment on this industry. Sugar is one of the greatest luxuries of life, is a most agreeable and wholesome food. It grows (the beet) in the finest and most healthy climates, it gives employment to men, women and children, and the refuse is a most valuable food for live stock. Who will discern the gratitude of all America and the world by making the best sugar cultivation a success?

NORTHERN PRODUCTIONS may excel ours in some thing, but they are few. The potato does best there now under our present culture, but the south has learned something about potatoes, and begins to rival them. Some northern apples now excel ours, but it is because vermin do not destroy them. After long experience, I believe the apple is best south of 38 degrees north. They have beaten us in hay only because we allowed them to excel us in summer grazing for cows, and superiority therefore in butter and cheese. But the field lies open for contest, because I know that last year, the driest ever known in Kentucky, the drier clover remained green all through, and there is no better feed than red clover for cows, green or cured.

In fishing the north now is ahead of us, but the south is full of the best fish, and the time is near when they will be utilized. All our sea coasts are full of fine fish, and if the carp, the "domestic fish," succeeds at all, it must be in the south. We have but one thing to contend against, and that is self-satisfaction.

A General Stampede. Never was such a rush made for any Drug store as now at C. F. Goodman's for a Trial Bottle of Dr. King's New Discovery for Consumption, Coughs and Colds. All persons afflicted with Asthma, Bronchitis, Hoarseness, Severe Coughs, or any affection of the Throat and Lungs can get a Trial Bottle of this great remedy free, by mailing at above named Drug Store.

MAMMOTH FOOTPRINTS. Impress of Sandals Worn by a Race of Giants. San Francisco Chronicle. An unusually large number of interested auditors were present last evening at the meeting of the Academy of Sciences, at the walls of the apartment in which the meeting was held were hung with cloth diagrams of the mammoth footprints unearthed within the walls of the Nevada state prison. The diagrams were obtained by rubbing lampblack over the prints, which were then pressed over with canvas and afterwards painted, the work being undertaken by C. Drayton Gibbes, curator and mineralogist, and Dr. H. W. Harkness, who were dispatched by the academy to undermine the Nevada penitentiary in the interest of science, their expenses being paid out of the Crocker fund for scientific research.

Dr. Harkness read the paper of the evening, maintaining that the footprints were of the pliocene period and antedated the present river system of the Sierras. The Nevada state prison lies in a valley which has an elevation of 4,300 feet and is flanked by the Sierras, the Washoe range and the somewhat elevated range of hills in the Carson desert. The prison was built about twenty years ago on the extreme point of a hill, having an elevation of about sixty feet. The hill is formed of sandstone which has its origin in the detritus brought by wind and water from the Sierras. This point was chosen with a view to utilizing the labor of the convicts, and about an acre and three-quarters have been removed to a depth varying from fifteen to thirty-two feet, showing the hill to be formed of layers of sandstone, alternating with seams of clay. In the lower stratum exposed by the work, numerous fresh-water shells of the genus Anodonta are observed. At an elevation of thirteen feet above these is found another stratum, in which, in addition to the Anodonta, are seen a species of Physa--an interesting discovery, from the fact that Clarence King reports no fresh-water shells in the region except one. The floor of the area bears evidence of having been tilted at a period subsequent to its deposition, and gives evidence of having been at one time the shore of some lake, local and isolated.

TRACKS OF MONSTER MEN. There were found six series of tracks of man, in regular order, and each showing more or less plainly, the imprint of a sandal. The tracks were laid in a layer of sediment of perhaps two inches in depth. Far below this layer is found the compact sandstone. In each instance the mud has been raised by the pressure of a foot into a ridge, which entirely surrounded the print. This mud is only broken on exposure. In nearly all the top portion of the sand is the well shown. Backward from the toe we generally find the impression of the outer sandal. The sandal is found to be nineteen inches in length, eight inches at the ball of the foot, while

the heel is six inches in breadth. In its outline the impression follows clearly the shape of the human foot. The average length of the stride is two feet three inches, and the stride is eighteen inches. One marked feature to which attention was called was that in all these tracks the toes turn well outward, which is not, as a rule, the habit of the North American Indian. Twelve perfect tracks were obtained. Invariably the tracks were those of a man.

MARKS OF MAMMOTH. Other tracks were also found, supposed to be those of the mammoth (Elephas primigenius). They were clearly in number, with an average stride of four feet 4 inches, the foot having a diameter of twenty-one inches. Neither the toes nor the pads were distinct. Two more series were discovered presenting ten tracks in line. In these the mud had been so soft that a ridge of about five inches had formed itself about each foot. The eighteen toes of the prints of a wading bird--either also the whooping crane or the big blue heron. These were seemingly not larger than the sizes now living. Tracks of the antelope, the wolf, and either the buffalo or the horse were also found. Two claims have been advanced why the sandal-shaped prints were not those of a human being: First, on account of their colossal size, and secondly, because the space between them creates a suspicion that they were of an animal other than man. Dr. Harkness, however, believes that this was due to the sandal worn, which disagreeable footwear also compelled the walker to distend his limbs. With the exception of the heel, in all the footprints except one the toes in the sandals was very distinct, and while not one perfect imprint of a sandal was found, still by taking the various missing parts found in different specimens, the resemblance of a sandal was obvious. The paper was further illustrated with stereoscopic views of the prison quarry and its wonderful footprints.

Chairman Justin P. Moore announced the donation by Mrs. E. B. Crocker to the academy of her private collection of 1,000 birds and 500 mammals, valued at \$12,000, and all of them mounted in handsome cases, and some of the specimens, which came from various portions of the world, not even being possessed by the British museum. Dr. Kellogg, W. J. Meyers and Charles G. Yale were appointed a committee to frame resolutions expressive of thanks to the donor.

Miss Nellie G. Sanborn and E. B. Rail were nominated for resident membership.

Bright's Disease, Diabetic, Kidney, Liver or Urinal Diseases. Have no fear of any of these diseases if you use Hop Bitters, as they will prevent and cure the worst cases, even when you have been made worse by some great purged up pretended cure.

What to do With the Corn-Cobs. On many farms corn-cobs can be seen scattered about the premises, half buried in the earth. Corn-cobs in this state are a nuisance, besides displacing the eye they give the place a slovenly appearance. In a pulverized state they make from ordinary fair bedding and act as an absorbent of liquids of the stable.

When converted into charcoal they may be considered of some value. A heavy per cent of the cobs are dry matter, which when raked in piles and burned to a charred state, first sprinkling liberally with salt, will be found of value as a feed for hogs and other stock, which will eat an allowance of it from time to time with a relish. Corn-cobs in the mature pile or stable are a nuisance, and damaging to horses and manure forks.

If You Are Ruined in health from any cause, especially from the use of any the thousand nostrums that promise so largely, with long fictitious testimonials, have no fear. Resort to Hop Bitters at once, and in a short time you will have the most robust and blooming health.

The Hotel Clerk Learning a Lesson. It had been quite a busy week for local hotels in New York. More than the usual notable and distinguished transients had been there, to say nothing of Chang Ling, Ding-a-Ling-a-Ling and Hard Pan Shan and the rest of the Chinese embassy at the Grand hotel.

"Intendee stoppe here long" said young Mr. Smith to a Celestial swell who was making a puzzle out of the wooden toothpicks on the counter. "Sir," said the Peking man, "stoppee long in New York?" repeated Mr. Smith with a smile broad in his hospitality and conveying his desire to be pleased.

"We shall remain in the city but a brief period," replied the Celestial, "prior to resuming our journey to Washington."

Then he walked away, not until he had left with the junior proprietor of the Grand one of his choicest diplomatic grins and rarest Hong Kong bows.

When Mr. Smith ascertained that he had been talking to a Harvard graduate and one who was "up" in six languages besides broken China, he was dumfounded and went out on the Broadway side, walked and looked up and down as if in search of one of those boys who kick a Gordon press.

Pretty Good. Mrs. Bacon Laporte, Ind., writes: "Your 'Spring Blossom' I shall you credit it up to be. My dyspepsia has all vanished; why don't you advertise it; what advantage will you make if I take a dozen bottles, so that I could oblige my friends occasionally?" Price 50 cents, trial bottles 10 cents.

"Nothing but favorable reports. Believe it is a specific for all Blood Diseases." G. W. JONES & CO., Memphis, Tenn.

"S. S. S. gives better satisfaction than anything we have ever handled." "Have never heard a complaint of S. S. S." ARTHUR PETER & CO., Louisville, Ky.

"S. S. S. has given entire satisfaction to every one." A. B. RICHARDS, Sherman, Tex.

"I have had excellent sale for S. S. S., and the results have been most satisfactory." J. O. BURDE, Bowling Green, Ky.

"Our sales of S. S. S. have been good, and its success is beyond question." JONES & CAREY, Montgomery, Ala.

"S. S. S. has given entire satisfaction to every one." E. REUSS, Paris, France.

"S. S. S. has given universal satisfaction." R. W. LOWERS & CO., Richmond, Va.

\$1,000 Reward will be paid to a chemist who will find, in an analysis of 100 lbs of S. S. S., one particle of Mercury, Iodine, or any other mineral substance. SWIFT SPECIFIC CO. FRANK ALBANY, Ga.

Price of Small size, \$1.00. Large size \$1.75. Sold by all Druggists.

WESTERN CORNICE WORKS! C. SPECHT, Proprietor. 1212 Harney St. - Omaha, Neb. MANUFACTURERS OF Galvanized Iron, CORNICES, DORMER WINDOWS, FINIALS, Tin, Iron and Slate Roofing, Specht's Patent Metallic Skylight, Patent Adjusted Ratchet Bar and Bracket Shelving. I am the general agent for the above line of goods.

IRON FENCING, Creosoting, Galvanizing, Vermining, Office and Bank Buildings, Window and Sash Guards, also GENERAL AGENT

KENDALL'S SPAVIN CURE. Sold by all Druggists.

COL. L. T. FOSTER. Youngstown, Ohio, May 10, 1882.

Dr. B. J. Kendall & Co. I had a very valuable Hamletton in my coat that I prize very highly. I used it for some time and it cured me of a small one of the other which I had in my eye. I had him under the charge of two veterinary surgeons who failed to cure him. I was one day reading the advertisement of Kendall's Spavin Cure in the Chicago Express. I determined to try it and I did not regret it. I took all I could get and it cured me. I used it for the fourth day the coat on and to be lame and the lameness disappeared. I used it on one bottle and the coat on and to be lame and the lameness disappeared. I used it on one bottle and the coat on and to be lame and the lameness disappeared.

THE MEDART PATENT WROUGHT RIM PULLEYS. E. M. MAXWELL, FREMONT, NEB., EXCLUSIVE AGENT FOR THIS STATE.

The following advantages are claimed for this Pulley: 1. It is stronger and more durable, owing: 1. To the absence of shrinkage strains. 2. To the increased number of arms. 3. To the fact that the rim is much stronger than the cast rim. It is BETTER BALANCED. IT IS MUCH LIGHTER. IT SAVES BELTING. IT IS CHEAPER. There is no danger of breakage in handling when shipped loose. When shipped loose they are generally accepted as third-class freight instead of first-class, and as the weight is only one-half that of cast Pulleys the freight is still further reduced. WE GUARANTEE THEM TO PERFORM SATISFACTORILY ANY WORK FROM THE LIGHTEST TO THE HEAVIEST. Pulleys of wider face than 18-inch are provided with two sets arms without extra charge. We supply each Pulley with two set-screws without extra charge.

ALSO Agent for Patent Hot Polished Shafting OUR CLAIMS.

What we claim for our PATENT HOT POLISHED SHAFTING is: 1. 1st. That it is round and straight. 2. It can be accurately rolled to any desired gauge. 3. That its surface being composed of magnetic oxide of iron abrades any undue tendency to rust or tarnish, while it at the same time gives one of the best journal or bearing surfaces ever discovered. 4th. That it will not warp or spring in key seating. 5th. That it is made of the very best of refined steel. 6th. For further particulars, price list and discounts, send to E. M. MAXWELL'S Foundry and Machine Shop, Fremont, Neb.
