"Counter-Irritants."

Not a little pain, disease, and alcepless ness also, may be saved by the proper un-lerstanding and use of counter-irritants. A of the body, can be removed or modified ploded. by putting the feet in hot water. How ? why? When the feet are irritated it causes a rush of blood to them, their veins become full and distended. This draws off the blood that was before crowding into the head or other affected part and producing pain there. Even rubbing the scalp brisk-

y may attract outwardly the blood prev-ously pressing the internal organs. A rubber bag of hot water at the feet, or ato a quiet sleep. Ten to twenty drops of aromatic spirits of ammonia swallowed in half a tumbler of water on going to bed, with a magnifying power of from two hun-or when restless and wakeful during the dred to four hundred diameters. After a night, will very often put one into an easy blood, and carried to every part of the

only aggravates the rouble.

A lightly sore or irritated throat is usumly aggravates the rouble.

A lightly sore or irritated throat is usually relieved or cured by applying an irritant to the outside. "Volatile limiment" is you for this. It is made by shaking well together any amount of sweet oil with one-fourth to one-half its bulk of aqua ammonia, or "hartshorn"—the amount depending upon the strength of the ammonia. It is a good, cheap counter-irritant to keep on hand—well corked, using a new cork as the old one shrinks from the action of the ammonia. The Louisiana State Lottery, on Tuesday, March 11, on ticket No. 14,467) No. we have deposited the ticket with the Columbar of the louisians of the louisians gave the case up and said she could not live but a few hours at most. The louisians gave the case up and said she could not live but a few hours at most. She was in this condition when a friend recommendation of videlicit: but the third letter was the mark used in medition for a drachm, which in writing much resembles x, and in "viz." was simply used as a mark or sign of abbreviation.

A Cure of Pre umonts.

Mr. D. H. Barnaby, of Owego, N. Y., says that his daughter was taken with a violent cold which terminated with pneumonia, and the best physicians gave the case up and said she could not live but a few hours at most. She was in this condition when a friend recommendation of the livid letter was the mark used in medition for a drachm, which in writing much tresmited by used so a mark or sign of abbreviation.

A Cure of Pre umonts.

Mr. D. H. Barnaby, of Owego, N. She was in this condition when a friend recommendation of the cold which terms at the director was the mark used in medition for a drachm, which in writing much terms at the director was the mark used in medition for a drachm, which in writing much terms at the director was the mark used in medition for a drachm, which in writing muc the old one shrinks from the action of the ammonia. It is also useful to rub well on the chest when there is soreness in the muscles. Alcohol or strong whiskey, rubed upon the throat (outside) as a counterirritant, often relieves a sore throat, and alcohol, cover the part well and quickly, to provent a chill from the rapid evaporation. Liniment, alcohol, hot water, or hot wet loths, or mustard, on the outside of the bdomen tends to relieve irritation of the powels, on the general principal of counterrritation above mentioned.

For an Inflamed Sore Throat or tonsils, a very good general remedy is to gargle the throat every hour or two with a teaspoonful of chlorate of potassa solution. It is well to keep in every house a good sized vial of water with more chlorate of potassa in it than will dissolve. The clear liquid then always of uniform strength, ready for use—a teaspoonful at a time, swallow-ing it after gurgling it against the inflamed onsils.

Interesting Census Figures

The census bulletin 1880 shows the total population of the United States at 50,152,-866, of which 43,404,876 are white, and 6,577,151 colored. The number of colored persons to each 100,000 whites is 15,153, against 14,528 in 1870. The greatest proportion of colored to white is in South Carolina, where three-fifths of the whole are colored; in Louisiana and Mississippi alf to three-fifths are colored; in Alabama, District of Columbia, Florida, Georgia, North Carolina and Virginia the colored form one-third to half the total; in Arkanleast proportion among the former slave states is in West Virginia, where there are out 4,355 to 100,000 whites, and in Missouri, where there are but 7,168. Outside of the former slave states the proportion of negroes is very small. Between 1870 and 1880, in the United States as a whole, there has been a gain of 625 colored on an assum-ed basis of 100,000 whites. Great relative gains during the decade have apparently een made in the Southern or former slave holding states. Of nine of the states which gained, eight stand at the head of the list, naving made relative gains of 944 to nearly 1,000. It is believed by the census officers, however, that these apparent gains are due, in a great mea-ure, to the imperfections of the census of 1870. Of the former slavestates which have lost, Texas and Florida ead. Both of these states received heavy white immigration, which more than overslanced whatever gain in the colored population may have been made. The move-ment of blacks in the Northern and Western states has apparently been of little comparative account. The migration of ocgroes has not attained such dimensions to be perceptible here. The states from hich the exodus principally took place, Mississippi, Louisiana and North Carolina, have all apparently gained heavily in the relative proportion of blacks, while Kansas, to which the major part went, has lost in proportion to the increase of population. indiana has gained slightly. The number of Asiatics in the United States is 105,717; Indians, 65,122. The Indians in tribal relations under the care of the Government not included.

Eye Memory.

Look stead.'y at a bright object, keep the oyes immovably on it for a short time, and then close them. An image of the object remains; it becomes, in fact, visible to the closed eyes. The vividness and duration of such impression when the contraction of of such impression vary considerably with of such impression vary considerably with different individuals, and the power of re-taining them may be cultivated. Beside this sort of retinal image thus impressed, there is another kind of visual image that may be obtained by an effort of memory. Certain adepts of mental arithmetic use the "mind's eye" as a substitute for slate and pencil by holding in visual memory pictures of the figures upon which they are operating, and these of their results. In my youthful days I was acquainted with an eccentric old man, who then lived at Kilburn Priory, where he surrounded mself with curious old furniture, reputed to have originally t slonged to Cardinal Wolsey, and which, as I was told, he be-queathed to the Queen at his death. Ho was the thea celebrated, but now forgotten, Memory 'Thompson," who, in his early days, was a town traveler (for a brewery, if I remember rightly,) and who trained himclf to the performance of wonderful feats of eye memory. He could close his eyes and picture within himself a panorama of Oxford street and other parts of London, in which picture every inscription over every shop was so perfect and reliable that he could describe and certify to the names and occupations of the shopkeeping inhabitants of all the houses of these streets at certain dates, when postoffice directories were not as they now are. Although Memory Thompson is forgotten, his special when a little short of full bloom. Investigation of eye memory. He could close his eyes and picture within himself a panorama of Memory Thompson is forgotten, his special faculty is just now receiving some attention, and it is proposed to specially cultivate it in elementary schools by placing objects before the pupils for a given time. then taking them away and requiring the a valuable food for poultry; ground into flour, pastry and cakes can be made from exists and may be of great service is unquestionable. Maple Sugar Making.

it was are very different things, and what it has gained in facility it has lost in pictures quesness. The old many control of the cure of the control of the cure turesquesness. The old camp, with its primitive appliances, is no more; the "ket tle" has been superseded by the "pan," and the trough has become a mass of crumbling decay. The women and children are kept at home, and no longer know the oldtime delights of "sugaring-off," though in the Arcadia of the past their services were not despised, and the whole household set up its abode in the woods.

The sap was collected then in troughs each about three feet long, hollowed out of sections of poplars, and was conveyed to the kettles in barrels, from which it was the kettles in barrets, from which it was transferred by scoops. There were five or more kettles, from ten to thirty gallons in capacity, and each was filled with sap, which was kept boiling, the larger kettles being refilled from the smaller ones as subject to an almost continuous drought. sistency, the hot syrup was dipped out and passed through a flannel strainer into covered tubs, from which again it was some suggest that it is due to a desired converse to the country has been visited with frequent falls of rain. What produced the change? is the question. into a thick-bottomed kettle for the purpose of "stirring off," some milk and the into the region by the iron rails. Others whites of several eggs being added to it, assert that it is caused by the atmospheric Thus prepared it was placed over a slow fire, and kept just below beiling point until the sediment and all foreign matter in it that up to 1854 the United States had been form one-third to half the total; in Arkansas and Tennessee, a fourth to a third. The
it became deliciously translucent. It was droughts, but since that year there has now exposed to a greater heat and gently been no such visitation; or, in other words, soiled, the evaporation continuing, and bringing it nearer to the point of granula ion. Now the sugar-maker is all watch fulness, and it fared ill with those who distracted him, for if the golden liquid the general introduction of railways in seething in the kettle boiled the least bit Europe, also, there has been no drought "soggy." He tested it constantly, plucking hreads of it from his stirring and trailing them round in cups of cold water. While the threads yielded waxily to the touch, the sugar was not yet done, but as growing the period of railway building the pe the sugar was not yet done, but as soon as the gets far more than is beneficial to the me broke crisp between his fingers, the time had come to take the kettle off the almost alarming degree in the past few ire. As the sugar began to cool, it crystalized around the sides, and gradually the they may be worth, and merely as showing whole mass, under a vigorous stirring be-

came granular. In that way sugar was made years ago, and when the sap flowed profusely the operations were continued through the night, rations were continued through the night, and the fire cast strange shadows in the woods. But instead of a hut of logs a permanent sugar-house is now built, and furnished with many elaborate devices to prevent waste and deterioration. Formerly, when the maples were tapped with an auger, an "elder quill" was inserted in the incision to conduct the sap into the trough below; that is a small piece of elderwood about three inches long with the pith bored out of it, which formed a tube; but in most orchards of to-day a galvanized iron in most orchards of to-day a galvanized iron spout is used, which has the advantage of not souring the sap nor choking many of the pores. Everything is "improved." collections are made with the unvarying order of collections from letter-boxes, and if the grove is on the hill, and the sugarhouse is in a hollow, the sap, as it is gathered, is emptied into a "flume," which quickly conducts it to a large reservoir within the building, where it is strained through a suitable cloth. From the reserbe delivered, after straining, in a condition

for "sugaring off." Maple sugar, as it reaches the market, is of a clearer color for all these improvements; but there are some who actually say that the flavor has fallen off, and that the new patent evaporators are a snare. One change has certainly not been for the better, and that is the abandonment of the social life of the old camps, which made sugar-times in the Green Mountains enduring memories with those who are now ebb-

ing away .- Harper's Magazine.

leaves and green stalks, cut up small, all being eagerly eaten. The fresh flowers when a little short of full bloom, furnish a dish for the table which bears favorable comparison with the antichoke. They contain a large quantity of honey, and so prove an attraction to bees. The seeds are

The Origin of Familiar Words.

The word "quiz" to make fun of, or poke un at a person, was the coinage of a theatrical manager in Dublin, who at a drinkins party with his friends one Saturday night, when the conversation turned upon the subject of words, offered to bet the wine that he could then and there coin a word when would be in the mouths of all Dubling be next day. The bet being taken and the party dispersed, the manager called up his call-boys and runners, gave them pieces of chalk, and ordered them to run all over the city, chalking the word"quiz" on everybody's shutter and fence they came to. This was done, and as a matter which animalculæ were present in an active of covrse, the new word was in everybody's mouth the next day. The manager wor his bet, and his word is now in all respect-

able dictionaries. The slang expression for death, "kicking the bucket," had its origin from one Bolsover, who, in England a great while ago

body, producing a gentle stimulus. This in stagnant water. The result of the obstruction, and thus relieving the best of excited brain.

A "cold" generally means that there is a representation of animal or vegetable genus.
