

Vital Questions!!!!

Of any school, what is the best thing in the world for quieting and allaying all irritation of the nerves, and curing all forms of nervous complaints, giving natural, childlike refreshing sleep always?

A SUN ENGINE.

Eriasson's Design for Utilizing the Sun's Rays as Motive Power.

Few persons know that the well-known Eriasson hot-air engine, of which thousands have been sold for pumping purposes within the last few years, grew out of Capt. Eriasson's experiments with a sun motor.

The model is not more than 8 inches high, yet under a hot sun it can work at a rate which shakes the heavy table upon which it stands.

It occurred to Capt. Eriasson that by turning his solar engine upside down and getting heat from a coal fire or a flame of oil or gas instead of from the sun, he could accomplish more in this climate, and the useful Eriasson pumping engine is the result.

There is no data by which we can tell how low a temperature is required to kill cholera germs. We know, however, from the history of it in 1849 that it was in St. Louis as early as February and March of that year and that by the middle of April it had assumed the form of an epidemic form at St. Louis and most of the river towns on the Missouri as far up as St. Joseph.

The solar engine, as a practicable working machine, was finished last summer and worked regularly in the backyard of No. 36 Beach street. Similar engines can now be built whenever there is any need for them.

This mechanical device for utilizing the sun's radiant heat is the result of experiments conducted during a series of twenty years; a succession of experimental machines of similar general design, but varying in detail, having been built during that period.

The motor is of the ordinary type. The body of the rectangular trough consists of iron ribs of parabolic curvature secured to the inside of the trough. On these stands the reflecting plates, consisting of flat window glass silvered on the under side, and fastened to the trough.

The trough is supported by a central pivot round which it revolves. The change of inclination is affected by means of a horizontal axle--concealed by the trough--the entire mass being so accurately balanced that a pull of five pounds applied at the extremity enables a person to change the inclination of the cause the whole to revolve.

The famous builder of the motor is now in his 82d year, but is as active in mind and body as a man of 60. He has lived for the last quarter of a century in the big house in Beach street--a fashionable neighborhood when he moved there--devoting his whole day to scientific research and experiment, assisted by his secretary and some draughtsmen and machinists.

has occurred outside of these two cities. All Italian and Spanish cities are quarantined against them and the general alarm will probably keep the epidemic within narrow limits, while the recent discoveries in what may be called the science of zymotic germ diseases may be trusted to reduce its evils within the infected cities to a minimum.

The remarks of a local contemporary on Sunday, and again on Monday, that we of this city have nothing to fear from the approach of cholera by way of Yokohama, because the steamers on that route reach here by a northerly circuit, are, we think, misleading.

There is no data by which we can tell how low a temperature is required to kill cholera germs. We know, however, from the history of it in 1849 that it was in St. Louis as early as February and March of that year and that by the middle of April it had assumed the form of an epidemic form at St. Louis and most of the river towns on the Missouri as far up as St. Joseph.

He has lived for the last quarter of a century in the big house in Beach street--a fashionable neighborhood when he moved there--devoting his whole day to scientific research and experiment, assisted by his secretary and some draughtsmen and machinists.

His health is excellent, and his interest in scientific matters of all kinds unabated. He never goes out during the day, but takes a stroll every evening. His health is excellent, and his interest in scientific matters of all kinds unabated.

So far there is nothing in the cholera in the south of France to alarm any one at this distance. It is confined to the two cities of Toulon and Marseilles, the latter having a population of 320,000, the former 62,000. It has been in Toulon for a fortnight and the deaths for the twenty-four hours ending at 6 p. m. June 24th were but four, while at Marseilles only two deaths had occurred.

GIFT-GIVERS IN OHIO.

A Long Roll of Men Who Have Contributed to Enrich Cincinnati. List Few Who Are Illustrations--Some Peculiar Cases of Magnificence.

Cincinnati appeals to the Chicago Daily News. Cincinnati calls a long roll of men who have contributed from their wealth to enrich the city, but among the names only one is illustrious, only one man is entitled to the honor of being called a benefactor; that man is Kaubert B. Springer.

But of Cincinnati's so-called benefactors. One of the high schools of this city is named from a childlike man, who gave about \$50,000 to endow it. His name was Thomas Hughes. He was a shoemaker so much given to his cups that it became impossible for him to live with him.

Four or five years ago an obscure man boarded at one of the principal hotels of this city. His landlord knew that he was wealthy and that was an assurance to him when the time came for making out the monthly bills.

About fifteen years ago a man named Tyler Davidson lay dying in this city. As his brother-in-law, a millionaire, Mr. Henry Probasco, leaned over the bedside, he said to the dying man: "What do you wish?"

David Sinton, the wealthiest man in the Ohio valley and a resident of this city, hitched a string to \$50,000 about six years ago, and offered it to the city in the shape of a bronze form, to be located on what is called Fifth Street Square.

Joseph Longworth, who owned acres of houses in this city, gave a few lots of the school of design, and just before his death, a few months ago, asked the trustees of the school to give them back to him, stating as a reason that he contemplated doing something better for that aesthetic institution.

Plies are frequently preceded by a sense of the lack of heat in the back, and the abdomen, causing the patient to suppose he has some affection of the kidneys or neighboring organs. At times, my tons of indigestion are present, as fatigues, weakness of the stomach, etc.

Wash somebody won't kick me all over dis town," said old Andy. "I hat's the matter!" "Matter what ter drabber er po' man crazy. I had er ten dollar bill whar I'd wucked er month fur er faller er watter."

It is said the Sioux City saloons will get around the law by moving to the Nebraska side and hiring a steamship to transfer the thirty free of charge.

When day got up I said ter do man, 'what your bill, ash?' "Three dollars, says he." "Gimme de change" 'I an' I hung down er ten dollar bill. He tuck it up, turned hit over an' said: "Whut yer tryin' to gin me? Dis heah is rank counterfeit."

"Good Lawd! I ginter git sick at de stomach. I had in that triflin' chile de good money. 'His Washin ton' a' I, 'Whar's dat sweet boy o' yourn gone?' 'Neber mins de sweet boy, said de ice-cream man. 'I want pay fur dat sweet stuff whut yer's all been puttin' erway."

"My dear little chile, lemme see dat money whut I gin yer terday." "Mudder tuck it erway from me, sez he. 'Said she would keep er part o' her fur me, but yonder she is spendin' it wid dat preacher."

Some persons strive to have fruit produced as far from the ground as possible. They seem to think that there is an advantage in having it near the sun. They delight in trees with tall trunks and branches that grow upward. They are constantly cutting off the lower limbs so as to secure very tall trees.

Large fruit, as apples, pears, and peaches are difficult to gather upward and grow in berry bushes in tree form. They encourage blackberry and raspberry cones to attain a great length, and are at the trouble and expense of training them with stakes and twine.
