NEW MEXICO. Interesting Account of Farm Life in the Far West.

The Method of Cutting and Threshing Wheat.

Profits from Raising Sheep and Cattle -The Mining Resources of the Territory.

Correspondence St. Louis Republican. In a former letter I promised to tell my St. Louis and St. Louis county friends this western country is stock raising. The

something about the agricultural, mining and stock-raising interests of New Mexico. Eastern farmers would laugh at the way crops are raised here. All the them to a ranch and sleeps with them by the way crops are raised here. All the the land has to be irrigated on which crops have been planted. Irrigating ditches run from the river through the forme immense herds in New Mexico. farms and gardens. These ditches are One man is said to have a half million usually about six feet wide at the top, sloping to about three feet at the bottom, and are about five feet deep. From the return sooner than from cattle, as he can main ditch small ones run out on either shear them twice a year and sell his main ditch small ones run out on either side, by means of which the water is turned into the fields when required, which is usually once a week during the time the crops are growing. Small ridges are thrown up with a plow both ways at right angles across the field, in usadi the side the sate of two years old rights claimed is about seventy-five per cent. of the number of ewes in a herd. The herds re exceptionally free from diseases of all kinds. The herds are usually divided up to the small ones of about 3.000 each. ways at right angles across the field, in order to hold the water and get an even distribution of it. "These ridges in many fields [are not more than fifteen yards apart. If the surface of the land is uneven the ditches must be closer than where the ground is smooth. All kinds of crops are raised here that grow in Missouri In the neighborhood be a scope of count, r five or twenty five All kinds of crops are raised here that grow in Missouri. In the neighborhood of Albuquerque fields of corn and wheat have been raised this season. The fields have been raised this season. The fields have been raised this season. The fields which I have seen of these crops were not large, to be sure, but sufficiently large to prove that good crops of both can be raised with the right kind of cultiva-tion. The Mexicans are the farmers for the most part and men clip them for the most part and use the rudest kind of pose on the ranch, and men clip them for implements for the cultivation of their farms. They still use the sickle for reaping their wheat; and when it is cut they let it lay upon the ground without binding until they are ready to thresh (there is no rain to injure it) and then it scather is no rain to injure it) and then it s gathered up, loaded upon wagons and sponsible man can get all the sheep he is gathered up, loaded upon wagons and taken to the tramping floor near by, where it is tramped out by horses, when the straw is forked off and the grain sepa-rated from the chaff by throwing it up into the air with broad wooden paddles, the handles of which are at least eight feet long. As the wind blows constantly during the threshing season, the clean-process is not nearly so hard and tadions. process is not nearly so hard and tedious, as some would imagine. I have not seen a simple threshing machine nor, in fact,a The gentleman who furnishes the sheep Urinary Organs. fanning mill in this country, but, of will furnish ranches upon which to keep course, these among other implements them. Men have thus started and in will be introduced, as required by the a few years had an immense herd. The

Then posts are set into the ground around the edge of the floor, to which ropes are attached, forming a network or rope fence to prevent the horses from running away, which they similar to the ones you have seen a hun-

and lost it sgain. He has been here a then the ranchman, with the exception quarter of a century, found a mine, sold of looking after his herd-salting, marking it for \$15,000, speculated and lost the his calves, etc., metaphorically folds his money; found another mine, sold it for arms and awaits the fortune which surely \$25,000, and, to-day, is not worth \$1,-000; yet he thinks the claims he has will and secure his hair for their wig factories make him a million one of these days. away back in the woods somewhere. He is only one of a class of thousands in This may seem very funny for some of this great west who have spent their your readers, but to us fellows who see youth and vigor looking, looking, look. ing, for gold, making a strike now and Albuquerque, it is not really provocative then, spending their money like water of laughter; and is a consideration to be when they have any, and when it is taken into account when a man makes up gone, go on another prospecting tour. his mind to go into the ranch business. The ore found here is gold; silver and copper-bearing—some of it very rich. Cattlemen expect their herds to in-There is any amount of low grade ore. of money invested they claim will increase at the rate of forty per cent. per STOCK RAISING. The great business in New Mexico and

annum. The writer has met one cattleman who claims to have raised ninety the one destined to take the lead in all five calves in one year from one hundred cows. The number of cows put upon a sheep ranches here cannot be surpassed ranch depends, of course, upon the amount of water upon it as well as upon in the world, and the man who invests a the amount of money the ranchman has to invest, varying from one hundred to several thousands. Once in a year grand round-ups are made, and the calves marked with the brands which are upon the cows they respectively follow. The cattle are usually sold for beef at four sheep. One advantage in raising sheep, at least to the poor man is that he gets a years old, sometimes at three, and frequently kept until they are five. They are sold to buyers who come to the rauch or are shipped east. There is no trouble in selling fat cattle and the demand will always be equal to the supply. Some of the ranchmen here have finely improved herds, while others have native cows, and cross with imported bulls, which in a few years will make a wonderful change in the herd in the herd.

 ON MANHOOD The report of the Kansas state board of agriculture for last month is of especial interest in an important particular. The report says: "The low price re-ceived for wheat this season will undoubtedly discourage its cultivation, and the counties heretofore engaged extensively in raising it will decrease their areas largely, turning their attention more to corn, grass and stock." Immediately following this expression of opinion, there comes this statement: "It will be ob-served that a decided increase in arae (in grass) has been made as compared

with previous years,' Putting these two facts together it may be asked whether, in view of the development of both our own and foreign wheat regions, the Kansas farmers are not acttime agree 1 upon to turn the same numing wisely. They seem to have been the ber of sheep received- fifteen hundred. first to make any general movement toward the substitution of other corps for wheat, but there is little reason to doubt **DR. HORNE'S ELECTRIC BELT** that, looking at the matter from their standpoint, they have obeyed the dictates sheep shear per annum three pounds at of prudence. Losing crops are no more easily borne by the farmer than losing business by the merchant, and when a cultivator of the soil finds that wheat, two clippings. This can be largely in-creased by introducing an improved breed of rams, which is being done by oats, corn, or anything else that he may plant is no longer profitable, he is sensible

body, and can be recharged in an instant by the patient. Winter is coming, the season of the year for aches and pains. In view of this fact we say buy one of Ur. Horce's Electric Bolts. By so doing you will avoid Rheumatism, Kidney Troubles and other ills that flesh is herr to. Do not delay, but call at our office and examine belts, No. 1422 Douglas street, cr C.
