the station in New York City at 4 o'clock the same afternoon. This may appear amusing at first sight, but Mr. Abbe is confident that it can be accompliated in the state of th he presents the following as his ideas on the subject, carefully wrought out during his residence in Manchester, England, and in this city. They represent the labor of two and a half years. The first condition requisite for this great railway, according to Mr. Abbe, is that the road-bed have no curves of less than 3,000 feet and no grades of more than twenty-seven feet to the mile. This would in the con-struction of the road necessitate the re-it all, and when I called one the grades of the road necessitate the re-it all, and when I called one the grades of the road necessitate the re-it all, and when I called one ist all, and when I called one the plan of taking quarters in Baltimore, Hundreds of them return in the course of them he said he was 'too which is only an hour distant by rail, and the season with profitable fares, and many which the capital required is expected to overcome. The reason for making the curves so gradual and the grades so slight is as may be easily consolided on account of the state by the total by the dida's by the total by the dida's by the total by the dida's by the state by the total by the dida's by the total by the dida's by the dida's by the dida's by the total by the dida's by the state by the dida's by the state by the total by the dida's by the state by the state by the state by the total by the state by the total by the state b to overcome. The reason for making the curves so gradual and the grades so slight is, as may be easily conceived, on account if a samay be easily conceived, on account of an old orange woman with a view to of an old orange woman with a view to of an old orange woman with a view to of the tremendous rate of speed at which this ideal express train will travel. It is also necessitated in part by the width of the track, which will be, when construct-ed, nine feet between the outer rails. THE BALLS. THE BALLS.

These rails will, when laid, be of ordi-nary pattern, though heavier than the ordinary rail, or with a face of about four and succeeded in getting on board. As and a half inches. Midway between the outer rails will rest another of the same
