A "DOCTOR" WANTED. Mote Worked Council

Where Is He New?

A man calling blosself Dr. J. O. Mote, recently arrived in this city with a great dourish of trumpets, took quarters at the Pacific house, and at once began scattering broadcast circulars, posters, and cards, announcing the fact that he was one of the surgeons of the "Amercan Surgical Institute, southeast corner of Ninth and Main streets, New York." He claimed to make a specialty of 'eye and ear diseases, deformities, chronic and special diseases," and after getting quarters at the Pacific proceeded to bustness. The most successful business he

had was in the clever eluding of his creditors. He met a young man here, who is employed as driver of the delivery wagon of the Boston Teastore, and who had met "the doctor" at a medical college in Keokuk a short time ago, the doctor then being a student there, and

The young man was surprised to see a traveling doctor, but the latter by his of telling that he expected a remittance from the east in a day or two, warmed himself into the young man's confidence and borrowed some money of him. The next day he slipped out of the hotel and his tronk was found to contain only some circulars. He also got one of the evenmore forever. Since leaving here, he has been heard from as working in a similar menner some towns in Nebraska, and efforts are being made to find his whereabouts. He is a young man, of very erect carriage, a high forehead, black monstache and short side whiskers, and wore a double-breasted pepper-and-salt coat. It would be a good thing if he could be brought to the front with a short turn, but he will probably assume another name, and seek new fields of

an extended account of at the time. The building has a frontage of 105 feet and is 100 feet in depth, and is three stories in height, but will equal in height an ordinary four story, building owing to the height of its cellings—the first story being 16 feet, the second story 18 feet and the third story 18 feet high, which together with the 5 feet necessary for the trusses between the second and third stories, and the fire-wall make the building 68 feet from the sidewalk to the top of the tower is about 100 feet and in fact it is the largest building of the kind in the state. The store rooms and offices need to be seen to be appreciated. Suffice it to say they are the finest in the city. Au ample hallway extends north and south through the portion devoted to lodge purposes. To the right of the hallway is a fine armory room arranged for the keeping of the uni forms and paraphernalia of the Knights. Connected with the armory by double doors, is a spacious parlor, which has been elegantly furnished. This is connected by folding doors with a library and reading room, of ample proportions. On the left of the room is located, facing the south, the largest and most commo dious lodge room with its necessary adjuncis, in the state. Conveniently connected with this apartment are the "red" and "black" rooms and the banquet hall. A kitchen apartment with all the needed appliances, is convenient to

The lodge room was solemnly dedicated to the uses of Masonry by Grand Master C. T. Granger, of Waukan, assisted by Grand Tyler Theo. Schreiner, of Mount Pleasant, and other grand officers appointed pro tem. Grand Secretary Parvin expected to be present, but was detained by sickness. After the dedicatory ceremonies, short addresses were delivered by Grand Master Granger,

"Merry Piper's tune," and the sound of gliding feet. This part of the programme was very efficiently attended to by the reception committee, composed of J. C. Hoffmayer, chairman; J. A. Atkins, J. T. Crockwell's establish- oued while nature was about to succumb, ment with its gala appearance, is rightly but also by the condition of the body af-named "Grand Holiday Fair," and no ter death. The only irrational symptom disclosed by the scalpel of the operator is the presence of dark, venous blood in the Be sure you get McClurg's self-rising right side of the heart and the venous system. The left chambers of the heart contain only a small quantity of dark colored blood, while the vessels of the membrane and sinmses of the brain are filled with it. This demonstrates plainly that the brain was the last organ to suc-

What, then, is the remedy? "I think," remarked one of the leading up. It proved to be a hat belonging to plumbers in this city, when questioned upon the subject, "that an absolute safewas in a saloon taking a drink, when case of fire, or it may be some very simout of his pocket, and then collaring him accidentally or purposely left open. and leading him to the police station. There is now an electrical arrangement ity. I do believe that accidents from escaping gas are mostly due to negligence, The following is a list of real estate in the second place to defects in the fixdip is supposed to be quite frequent."

> The coroner's poceedings in all such cases are singularly defective in that they do not place the responsibility where it properly belongs. A very simple examination of the gas fixtures in the room of an asphyxiated person will quickly show whether the switch key is provided with checker which prevents the switch from being turned completely around, thus extinguishing the gas when half turned, and opening the pipe again if the circuit is wholly or partially completed. The expert referred to claims that there are but few fixtures without any checker, but that the latter is very apt to loosen and fall out, or be worn off so as to allow the switch to be turned beyond the point where the gas is completely shut off. The chances are that nine cases out of ten a missing or defective checker is the cause of escaping gas. A complete safe-guard against any accident by either ignorance or defective fixtures would be to turn the gas off at the meter. The gas contained in the fixtures would then burn out and no more could escrpe. This remedy, how-ever, is not available, for obvious reasons trivance acting like a chimney over every burner would be a good remedy, if the necessary draft could be obtained. In that case the escaping gas would be drawn upward into some chimney or ventilator, instead of permeating the room. But in hotels, where most of the accidents occur,

From all that can be learned, the check mission of J. H. Most, a veteran and at the switch is the best safeguard ingenious plane maker of Hartford, that against escaping gas so far, but it is very hable to fail in its purpose if the most rigid attention is not paid to the fixtures Here, then, is a great field for the pro fact getting published was the basis of the conventional belief in Connecticut's find some remedy or contrivance that will
