

THE NEBRASKA CORN CROP.

On the Whole It is in Pretty Good Shape.

EFFECT OF RECENT RAINS.

Early Corn has been Greatly Helped but Some Sown Late is Beyond Redemption—Crops in Iowa.

Corn is King.

The following reports on the corn crop from the BEE's correspondents indicate no radical change since the previous reports were published. On the whole, however, the outlook is bright and the indications are that Nebraska will be one of the very few states in the great corn belt where the yield will fall less than 20 per cent below the average. The long drought it is certain, has been effectively broken by the rains of the past two weeks and corn, which is not already beyond redemption, will continue to improve until it is gathered. These reports are in response to the following instructions sent by the BEE to its correspondents: "Please give us an honest report of the present condition of corn, probable yield, estimate of acreage, etc."

(Specials to the Bee.)

CECILIA, Neb., August 20.—The increased acreage of corn is 10 per cent over last year. The yield will be 75 per cent of a full crop for local markets. The drought, two weeks ago one to two miles wide reduced the percentage from the last report. Chinch bugs have not yet reached the corn, but some more, but it is hard to tell how much. ALBION, Neb., August 20.—In the northern part of Boone county, with few exceptions, corn stands in a very good shape, yielding a full crop. In the center of the county the corn is badly dried or else damaged as far as the yield is concerned. In the southern part, what the drought has not injured has been cut by hail. While the increase of acreage is fully 20 per cent, the yield throughout the county will not be over 50 per cent. Many farmers have already cut their corn for winter fodder.

KEARNEY, Neb., August 20.—The prospects for corn were never so good as at present. Sixty bushels per acre would be a fair estimate. Along the south line the chinch bug, however, has badly damaged the crop. This covers only a few sections of the area of the county.

BELLWOOD, Neb., August 20.—Owing to dry weather the yield of corn is expected to be a slight falling off in the yield of corn, especially in late planting; but the average yield will yet fully reach sixty bushels per acre. The late season has averaged forty-five. The increase in acreage is considerably over the previous year, probably about 20 per cent.

BRUNARD, Neb., August 20.—Taking Butler county in all, corn will be between one-half and three-fourths of an average crop. Now it is a good average. The chinch bug is nearer the latter figure. Oats, now being threshed, yield about thirty bushels to the acre.

LYONS, Neb., August 20.—In this immediate vicinity there is an increase of acreage in corn of about 20 per cent over last year. The average yield per acre will be at least 25 per cent greater than last year, and will reach from forty to 50 bushels per acre. The chinch bug is estimated at seventy-five bushels. There is very little damage from drought.

OKLAHOMA, Neb., August 20.—The condition of corn in this county at present was never known to be better. It is in advance of previous years fully two weeks. Now the plant is in the best of health. The yield is first-class. A safe estimate for the county is sixty bushels per acre. The increased acreage is fully 25 per cent over last year. The farmers are very much exhilarated over the outlook.

LONG PINE, Neb., August 20.—On account of the dry weather during the earlier part of the summer the corn in northwestern Nebraska was kept in a very poor condition. The chinch bug to gain such headway that there will not be over half a crop. There are very ominous rains now and it is assisting the corn very materially.

OWENSBORO, Neb., August 20.—The present prospect for corn is that it will be about one-fourth of a crop in the county. The increased acreage over last year is 100 per cent. Early planted corn will not yield more than 15 per cent of a medium crop.

ARAPAHO, Neb., August 20.—Late corn will yield one-fourth of a crop while early corn will yield nothing. The acreage this year is double that of last year.

SIDNEY, Neb., August 20.—In Cheyenne county corn is in fair condition. The rains have fallen in the county and the crop is mature in every section, but there will be a great many fields of good corn. It is impossible to make a reasonable guess of the probable yield. Increased acreage is probably 30 per cent.

VALENTINE, Neb., August 20.—The condition is far above average, with the possibility of the extra yield of 25 to 30 per cent of the county, which has not been favored with so much rain. The acreage is fully a half greater than last year. There are about thirty bushels to the acre throughout the county.

CLAY CENTER, Neb., August 20.—Corn in this immediate locality will make a three-quarter crop. The increased acreage is about 25 per cent. The probable yield, 40 bushels per acre. The crop is in a very good condition. In the central, north, and west part of the county there has been plenty of rain, but in the south and southwest parts there has been very little. The drought line is sharply defined two miles south and southeast from Clay Center.

HARVARD, Neb., August 20.—Corn is reasonably good all over the county. Some fields, however, will not come up to this. There is about 50 per cent increase in this county. Millet and pasturage in good condition.

WOOD RIVER, Neb., August 20.—Corn in this section is the best ever known here by great odds. Travelling men say it is not excelled in any section of Nebraska. The increased acreage places it at 25 per cent over last year. Nobody expects less than 50 bushels per acre. The yield is about 50 per cent of a full crop.

FRANKLIN, Neb., August 20.—The splendid rain of this week has greatly helped the corn, which was in a very poor condition. But for the drought the yield would have been enormous—as it is about 75 per cent of a full crop. The yield is about 50 per cent of a full crop.

GRAND ISLAND, Neb., August 20.—The damage to corn by drought and chinch bugs will reduce the yield fully 50 per cent, but the present condition is very good. In some localities that have suffered severely, while others close to them will exceed the average. The yield is about 50 per cent of a full crop.

SUTTON, Neb., August 20.—In the northeast quarter of Clay county corn will average 25 bushels per acre. It looks now, however, as if it will be 50 per cent. The increase in acreage over last year is about 20 per cent. The northwest corner of the county was favored nearly as good. In the south half of the county the corn crop is almost an entire failure.

AVOCA, Neb., August 20.—Corn in this vicinity will average 35 bushels per acre, and the quality will be good. The average is smaller by 3 per cent.

NEWARK, Neb., August 20.—Corn in this neighborhood will average 30 bushels per acre. There is a decreased acreage of about 5 per cent, which is in small grain preparatory to sowing late corn. The quality is likely to be good and sound.

PLATTSMOUTH, Neb., August 20.—The average of corn in this county is 10 per cent above last year. The yield is about 50 per cent of a full crop. The increase in acreage over last year is about 20 per cent.

CLARKSON, Neb., August 20.—The present condition of the corn crop throughout the northern part of Colfax, Stanton and Clun counties never has been more encouraging. Most of it is beyond any danger of being injured by the chinch bug. The prospects are good for a yield of 50 bushels to the acre on an average.

SCHUYLER, Neb., August 20.—In the northern part of the county the yield is about 50 per cent of a full crop. The increase in acreage over last year is about 20 per cent.

ATKINSON, Neb., August 20.—We are having an abundance of rain now and late corn will yield from 30 to 40 bushels to the acre. Early corn is nearly lost as a result of dry weather. There is 20 per cent increase in the acreage over last year.

ALBION, Neb., August 20.—Corn in the north half of the county is about 20 per cent over last year. The yield is about 50 per cent of a full crop.

BROKEN BOW, Neb., August 20.—Owing to the great number of new farms opened up in the section of corn in the county, the yield is about 50 per cent of a full crop. The drought has not affected the crops in Broken Bow county, and the conditions of the corn at present, gives a very fair prospect for an average of at least 40 bushels per acre. Chinch bugs attacked the corn some ten days ago, but recent rains have completely driven them out.

COZAD, Neb., August 20.—The corn crop is an assured success. It will average 50 to 75 per bushel greater than last year. Slight hail storm here a few days ago did a little damage in places, but will not affect the output much.

OVINGTON, Neb., August 20.—Until the recent hail storm the corn crop was very promising as far as the yield is concerned. The yield is about 50 per cent of a full crop. The drought has not affected the crops in Ovington county, and the conditions of the corn at present, gives a very fair prospect for an average of at least 40 bushels per acre. Chinch bugs attacked the corn some ten days ago, but recent rains have completely driven them out.

FAIRBURY, Neb., August 20.—The crop of corn in this county will average one-third better this year than last. There is much difference in different localities of the county, but the general average is about 50 per cent increase in the acreage. The condition now is good as there has been an abundance of rain lately. The yield is about 50 per cent of a full crop.

OMAHA, Neb., August 20.—Corn will average about 10 bushels per acre. The acreage is about double that of last year. Rain came too late to do much good.

NORDEEN, Neb., August 20.—Small grain is all harvested in this vicinity. The yield has been, wheat from 10 to 20 bushels, to 35; corn from 10 to 20 bushels, to 35; and oats from 10 to 20 bushels, to 35. The crop is in a very good condition.

STANTON, Neb., August 20.—Corn in this locality is good with prospects of a large crop. The yield is about 50 per cent of a full crop. The drought has not affected the crops in Stanton county, and the conditions of the corn at present, gives a very fair prospect for an average of at least 40 bushels per acre. Chinch bugs attacked the corn some ten days ago, but recent rains have completely driven them out.

SEWARD, Neb., August 20.—Corn looks well throughout the county and bids fair to yield three-fourths of an average crop. The increased acreage is not over 10 per cent above last year.

SPRINGFIELD, Neb., August 20.—The different rain showers within the past week and a half have done much to help the crop. The yield is about 50 per cent of a full crop. The drought has not affected the crops in Springfield county, and the conditions of the corn at present, gives a very fair prospect for an average of at least 40 bushels per acre. Chinch bugs attacked the corn some ten days ago, but recent rains have completely driven them out.

WYOMING, Neb., August 20.—The crop of corn in this county will average one-third better this year than last. There is much difference in different localities of the county, but the general average is about 50 per cent increase in the acreage. The condition now is good as there has been an abundance of rain lately. The yield is about 50 per cent of a full crop.

YORK, Neb., August 20.—The acreage of corn in this county is about 20 per cent over last year. The yield is about 50 per cent of a full crop. The drought has not affected the crops in York county, and the conditions of the corn at present, gives a very fair prospect for an average of at least 40 bushels per acre. Chinch bugs attacked the corn some ten days ago, but recent rains have completely driven them out.

WYOMING, Neb., August 20.—The crop of corn in this county will average one-third better this year than last. There is much difference in different localities of the county, but the general average is about 50 per cent increase in the acreage. The condition now is good as there has been an abundance of rain lately. The yield is about 50 per cent of a full crop.

WYOMING, Neb., August 20.—The crop of corn in this county will average one-third better this year than last. There is much difference in different localities of the county, but the general average is about 50 per cent increase in the acreage. The condition now is good as there has been an abundance of rain lately. The yield is about 50 per cent of a full crop.

WYOMING, Neb., August 20.—The crop of corn in this county will average one-third better this year than last. There is much difference in different localities of the county, but the general average is about 50 per cent increase in the acreage. The condition now is good as there has been an abundance of rain lately. The yield is about 50 per cent of a full crop.

WYOMING, Neb., August 20.—The crop of corn in this county will average one-third better this year than last. There is much difference in different localities of the county, but the general average is about 50 per cent increase in the acreage. The condition now is good as there has been an abundance of rain lately. The yield is about 50 per cent of a full crop.

WYOMING, Neb., August 20.—The crop of corn in this county will average one-third better this year than last. There is much difference in different localities of the county, but the general average is about 50 per cent increase in the acreage. The condition now is good as there has been an abundance of rain lately. The yield is about 50 per cent of a full crop.

WYOMING, Neb., August 20.—The crop of corn in this county will average one-third better this year than last. There is much difference in different localities of the county, but the general average is about 50 per cent increase in the acreage. The condition now is good as there has been an abundance of rain lately. The yield is about 50 per cent of a full crop.

WYOMING, Neb., August 20.—The crop of corn in this county will average one-third better this year than last. There is much difference in different localities of the county, but the general average is about 50 per cent increase in the acreage. The condition now is good as there has been an abundance of rain lately. The yield is about 50 per cent of a full crop.

WYOMING, Neb., August 20.—The crop of corn in this county will average one-third better this year than last. There is much difference in different localities of the county, but the general average is about 50 per cent increase in the acreage. The condition now is good as there has been an abundance of rain lately. The yield is about 50 per cent of a full crop.

The condition now is good as there has been an abundance of rain lately. The yield is about 50 per cent of a full crop.

WABOO, Neb., August 20.—The corn prospects were never so good as at present. Sixty bushels per acre would be a fair estimate. Along the south line the chinch bug, however, has badly damaged the crop. This covers only a few sections of the area of the county.

WABOO, Neb., August 20.—The corn prospects were never so good as at present. Sixty bushels per acre would be a fair estimate. Along the south line the chinch bug, however, has badly damaged the crop. This covers only a few sections of the area of the county.
