

LINCOLN NEWS AND NOTES.

Probable Result of the Soldier's Home Investigation.

NEW NEBRASKA ENTERPRISES.

Significant Resolutions Presented at the Meeting of the Board of University Regents - The B. & M. Reduction.

LINCOLN BUREAU OF THE OMAHA BEE.

The inquiry into the charges against Commandant Hammond, of the soldiers' and sailors' home, was concluded Wednesday last. What action the governor will take in the matter is not yet known, but it is thought that he will make no changes. It is understood that the board of public lands and buildings will make no recommendation. And, in view of the fact that but six of the inmates of the home had complaints and grievances against the management of the institution, it is urged by friends of the commandant that there is not sufficient reason to warrant a call for his resignation. Fifty of the fifty-six inmates of the home testified that they were well clothed, well fed and uniformly well treated. While this was so, however, the testimony indicated that the commandant was inclined to be peevish and irritable, and at times displayed considerable temper. The governor returned from Lincoln Monday having tarried a day after the departure of the board of public lands and buildings and the advisory board. It is said that the governor was bent on going to the bottom of everything, and in reply to the interrogatory of THE BEE representative "how did you and matters?" he said: "As usual in such cases, the charges against Commandant Hammond were greatly exaggerated. I am very busy and have nothing further to say at this time."

Supreme Court Rooms Changed.

Not long ago the board of public lands and buildings assigned the rooms formerly occupied by the governor, on the second floor, for the temporary use of the supreme court. It is understood that this was done in accordance with a request of the members of the supreme bench, who evidently feel that their rights in all things have not been maintained, and especially regarding the assignment of rooms for the various departments of state. Albeit, the rooms just assigned for temporary relief were occupied to-day, and the supreme court will continue the adjourned session of the court in new quarters next week. The court room occupies precisely the same size of the room vacated, and no portion of the library had yet been moved. But the new rooms will be added to the general conveniences. It now begins to look as though the handsome suit of rooms just above the executive department will have to be begone. But the temporary rooms will be cooler and more pleasant than the old.

Employees on the Anxious Seat.

The Burlington officials, Messrs. Holdrege, Stone, Posselty, Calvert, all of the division superintendents and assistant superintendents, were here to-day in consultation as to the advisability of cutting down the force of the road's employees, in all departments, at least 20 per cent. This move creates a good deal of excitement among the employees of the road, and among the friends of the industrial college. The action of the conference cannot yet be ascertained, but the feeling is strong that there will be a general lopping off of the force.

Significant Resolutions.

The following significant resolutions were passed at the April meeting of the board of regents, which closed yesterday:

Whereas, the act of establishing an industrial college approved July 3, 1888, makes it the leading object of the industrial college to teach those branches of learning which are related to agriculture and the mechanical arts, and Whereas, the natural and physical sciences are all in some degree related to agriculture and the mechanical arts, so that the industrial college is obliged by the terms of its organic law to maintain a course of scientific instruction as its "leading object,"

Resolved, That the logical relation of the scientific course to the technical course of the industrial college, and the fact that the industrial college has not been in conformity with the congressional act granting lands for the endowment of a college of agriculture and the mechanical arts, and Whereas, it is not expedient or economical to duplicate in any college of the university a course maintained in another college of the same university, be it so.

Resolved, That the scientific courses of study shall hereafter be a part of the industrial college, and that the courses of study in the industrial college shall be catalogued as students of the industrial college.

The sentiment is strong here that the resolution is a concession to the friends of the industrial college that has not been in conformity with the congressional act granting lands for the endowment of a college of agriculture and the mechanical arts, and that the change has therefore been made that the funds have been misappropriated.

Newly Incorporated Industries. The Bohm Sash and Door Company, with the State Bank of Lawrence, knock for recognition among the rustling enterprises of the state. Articles of incorporation were filed with the secretary of state, and the company is now in the process of organizing.

Use of Horseradish. Dr. J. Williams, Denton, Ia., says: "I have used it largely in nervousness and dyspepsia, and I consider that it stands unrivalled in the treatment of these affections, and also used it in cases of sleeplessness, with very gratifying results."

THE OMAHA GUARDS TO BE PRESENTED WITH AN ELEGANT STAND. On Tuesday, the 30th of this month, the Omaha Guards will be presented with a stand of colors at their armory, the speech of presentation being delivered by John F. Webster. The colors are the gift of leading society ladies of the city, and are the result of a moonlight picnic given at Hanscom park last year. The stand cost \$150, and is of the finest description. It consists of the United States flag, the state flag, and a banner bearing the words, "Omaha Guards, organized October 24, 1857." On the reverse is a beautiful monogram of the letters "O. G."

Over two hundred university people went to Crete this afternoon on a special train to attend the oratorical contest to be held there to-night.

Architects claim that Lincoln will have the finest court house in the state when it is finished. It is certainly admirably planned, and already shows an exterior that promises to be fine.

The spirit of the new christian church is reaching outwards. It is finely proportioned and adds greatly to the appearance of the building. When finished it will be the peer of any of Lincoln's handsome churches.

Two great enemies—Hood's Sarsaparilla and impure blood. The latter is utterly defeated by the peculiar medicine.

A Paper Hanger's Fall. W. P. Eggleston, a paper-hanger, fell from the third floor of the Lang building on Thirteenth street yesterday and sustained a fracture of his right hip.

Englewood wished to go from one part of the building to another, and, being in a hurry, attempted to step from one outer balcony to another, supporting himself by a clothes line. The line broke and Eggleston fell, fortunately upon a light spring wagon, which broke the fall and undoubtedly saved his life.

He had kicked up unconscious, but regained consciousness in a few minutes. He suffered greatly, so much that the doctor thought it inadvisable to attempt an immediate examination of his injuries. He lives at 808 North Twentieth street.

Dr. Gluck eye and ear, Barker, Okla.

INTER-STATE BOARD.

Representation of it Wanted for a Western Man.

The movement instituted recently toward the selection of a western man to fill the vacancy in the inter-state railway commission receives the encouragement of leading business men of the city.

President Martin of the board of trade said: "Yes, it is a good thing to agitate. This, you might say, a vast territory not represented in one of our chief commercial bodies. By selecting a man west of the Missouri we would be represented, and when an issue came up that applied to western matters, there would be at least one man on the board familiar with our requirements."

Another opinion that of M. Woolworth would be a good man to urge for the position. Yes, I intend to bring this to an issue and will call for a meeting of the directors next week and call for a representative and we should all labor in that direction.

Benjamin Gallagher, of Paxton & Gallagher—By all means. If this can be brought about, every particle of influence should be brought to bear. The Trans-Missouri territory is entitled to a representative and we should all labor in that direction.

N. Merriam—It is our duty as business men to unite in the issue and push some good man to the front for the position. The Trans-Missouri territory is the producing territory of the United States. It is an important factor in commercial sources. We should endeavor to obtain recognition on the commission and in turn furnish that body with a man familiar with the requirements and needs of our people.

P. E. Himelbaugh—It is a grand idea. The west should be represented on the board of trade. By having a man acquainted with the territory and its demands, when a question arose concerning us, he would be there to champion our cause. He would also have a general knowledge of the situation, of such an individual at some distant point must necessarily be ignorant. I am in favor of supporting any good man that may be centered upon.

J. C. Phillips—It is essential that the territory west of the Missouri river be represented. It is an intricate issue that a man familiar with the surroundings would prove valuable. Then again it would equalize representation, and when the board considered a problem, it, as a body, would be familiar with all its territory and to have a representative means that fairness will be exercised and our demands given attention.

Smith on the O. R. N. Co. Vice-President Holcomb, of the Union Pacific, will soon resign, not the vice-presidency of the Union Pacific, but the general management of the Oregon Railway & Navigation company. He held the latter position at the time he was called to the vice-presidency of the former. His successor is not other than C. J. Smith, general commissioner and tax auditor of the Union Pacific at this time. Every detail in this direction is now complete, and all the necessary arrangements for the holding of the directors of that company June 13th election will take place. Smith's successor will likely be an Omaha man, and one at present connected with the Union Pacific.

B. & M. Employes Fervish. That something is about to fall is generally conceded by attaches of the Burlington system. Yesterday H. B. Stone, second vice-president and general manager of the B. & M. arrived from Chicago in his private car and together with General Manager Holdrege, of the B. & M., left for a tour of the western portion of the system.

Idaho Central Officers. At the annual meeting of the stockholders of the Idaho Central held at Cheyenne, aside from electing a new directorate, the following officers were elected: President, Ed Dickinson, assistant general manager of the Cheyenne, Wyo., and the following: Secretary, J. A. McGee, Nampa, Idaho; treasurer, G. M. Lane, second vice-president of the Union Pacific, Boston.

Hours of Labor Reduced. George Cushing, superintendent of motive power and machinery of the Union Pacific, yesterday issued an order reducing the hours of shipment at this place from nine to eight hours a day, and the reduction will be made in all other places. It is reported that dissatisfaction prevails among the workmen as a result. It is also reported that another reduction will be made in a few days, both in the hours of labor and the number of men employed.

Railroad Notes. Superintendent Requisite, of the Nebraska division of the Union Pacific, has returned from a trip to points west.

The Nebraska Railroad Guide, a monthly journal published in Omaha, by Frank N. K. Orr, has made his appearance and is complete in detail.

Roadmaster Brown, of the Nebraska division of the Union Pacific, has issued an order prohibiting smoking by the conductors, while at work, and also compelling the section hands to bring their luncheon, and not leave the track at noon.

The Nebraska division of the Chicago, St. Paul, Minneapolis & Omaha will hereafter send all stock from the various places on their line to South Omaha by way of Briggs and Webster, and all other lines will be closed.

The Nebraska division of the Chicago, St. Paul, Minneapolis & Omaha will hereafter send all stock from the various places on their line to South Omaha by way of Briggs and Webster, and all other lines will be closed.

The Nebraska division of the Chicago, St. Paul, Minneapolis & Omaha will hereafter send all stock from the various places on their line to South Omaha by way of Briggs and Webster, and all other lines will be closed.

The Nebraska division of the Chicago, St. Paul, Minneapolis & Omaha will hereafter send all stock from the various places on their line to South Omaha by way of Briggs and Webster, and all other lines will be closed.

SOUTH OMAHA.

High School Society Election. The South Omaha high school Friday afternoon elected officers to serve for the ensuing term of three months as follows:

President, Frank Cochrane; vice-president, Miss Stella Coe; secretary, Miss Emma Blanchard; treasurer, Miss Nellie Chesley; critic, Edward Sawyer; editor, W. R. Dunroy. The society will give literary and musical entertainments every Friday afternoon at 2 o'clock.

The Emonon's Dance. The last regular dance season at the Emonon, last night, was well attended, and was one of the most enjoyable of that social club's society. The orchestra furnished good music, the attention of officers and committees made the very air welcome, while excellent refreshments helped to make the social gathering a most successful one.

Notes About the City. Charles C. Stanley is in Fremont on business. William Caldwell, of Logan, Ia., is the guest of the Emonon. T. E. Hunt, of Independence, Ia., is the guest of John P. Evers.

What Mr. Rush Expects in Special Taxes. "No, we have nothing here now," said City Treasurer Rush, in reply to an inquiry for news, "but for three months after the 1st of May this will be the busiest office between Chicago and San Francisco. Then the semi-annual taxes will come in, and I wish to say that very few people appreciate the amount of work we are compelled to do. Just give you an idea, let me state that there are now 350 paving districts, as many curbing districts, all of which are special, besides the sidewalk, grading, salting, and other bills of lots and viaduct and miscellaneous taxes, in every part of the city. The collection of our general tax is a mere bagatelle as compared with the special taxes. For each of these various funds we keep a separate ledger account. Every delinquent receipt is familiar with all its territory and to have a convention, therefore, in all, we have over seven hundred accounts." Mr. Rush and his force are taking advantage of the dull and quiet time to clean up their books and get ready for the siege when it comes.

The young people's society of the Methodist Episcopal church hereafter will meet in the basement of the church Tuesday evenings.

Some enterprising thief Friday morning stole a pair of pants from S. M. Press' display rack in front of his store, and got away with undiscovered success.

William McQuerry yesterday cut a deep gash across the palm of the right hand with a cleaver while working in the Armour-daily pork cutting department. It had to be sewed up by a surgeon.

Four vagrants were given a day in jail by Judge King, and they are scrubbing and cleaning up the court room and jail. Hereafter all vagrants will be given a day in jail.

Miss Gertrude Glasgow was taken suddenly and seriously ill Thursday evening and is confined to her room. Miss Blanche Glasgow, her sister, is attending to her.

Agent Charles H. Broderick, of the Chicago & Northwestern railroad company, was married in Omaha Thursday evening to Miss Betty A. Maynard, of Wagon, Mich.

Mr. Halcrow, editor of the Omaha Journal, has been put in the Drivers' Journal office, and Editor L. H. Hilton has now one of the most complete and elegant newspaper offices in the city.

All citizens interested in street railways are invited to meet with the board of trade in special meeting this evening to meet reports of the street railway commission.

The Brown Park hotel, Twenty-fourth and B streets, was the scene of a dance on Friday evening. Good music and a fine spread of palatable refreshments and a good attendance allowed the large number present to spend a very enjoyable evening.

Thursday ex-Judge Reuther paid to the city treasurer \$133.40, the entire amount of fines, costs, etc., in his hands belonging to the city. He has been a very generous benefactor of many thanks for kindnesses shown him.

The home of the Rev. D. W. Luther, of Aetna, who was visiting here on Thursday evening by neighbors and members of his congregation making an old-fashioned donation party and each carried in as much of the law to take it home as they could. The evening was most delightful to guests and host and hostess.

BOOMERS SPLIT. Beginning Their Quarrels Before Being Out of Their Journey. The Oklahoma boomers, a few of whom, held a meeting last night at Kessler's hall on South Thirtieth street, and the weekly election of officers for the colony again took place. It seems now that there are two separate organizations. A few weeks ago Captain Smith was deposed from the position of president of the colony. Other officers were also deposed, and now one of them, held a meeting last night at Kessler's hall on South Thirtieth street, and the weekly election of officers for the colony again took place.

A WONDERFUL BREAK DEAD. A Boy Who Couldn't Be Hurt Killed by a Ball of Yarn. Cincinnati, April 12.—[Special Telegram to THE BEE.]—Young John Walsmith, who has been a puzzle to the local medical faculty for four years past, died last night. He had had under a physician's care four years and had given a great deal of trouble. He was a boy of about 15 years of age, and had been placed his hand on a hot stove and watched it roast. Nothing seemed to materially injure him or give him pain. He had been run over by a wagon, he had fallen from the top of the bridge over Spring Grove avenue, a distance of forty feet, and once walked out on a hot stove window. Any one of these casualties would probably have killed a boy in a normal condition, but he never broke a bone. He was searched all over and surgeons have searched him on his back and under himself. Although he was a bright child at four or five years of age, he soon began to grow stupid and was inclined to idleness. His heart had nearly gone and he had ceased to talk. In his stomach was found a strange variety, consisting of a green ball of yarn, made of the same material as that used in the manufacture of the ball of yarn, and which contained a large needle. It stuck at the stomach entrance and killed him.

A REMARKABLE LEAP. Meredith Stanley Makes a Drop of 295 Feet in Safety. Cincinnati, April 12.—Meredith Stanley, of this city, the well-known athlete and bridge jumper, who has challenged Brodie, of New York, yesterday made the most remarkable leap on record. It was from the famous high bridge over the Kentucky river. The height is 295 feet. He selected a place where the water was twelve feet deep, and, attired in silk tights and slippers, leaped into the air, and, doubling up his body, fell to the water, where he was quickly seized by an assistant in a boat. He coughed blood a little while, but soon recovered and took the train for Cincinnati. He escaped without breaking his skin, and to-day says he feels as well as ever.

A Prairie Fire Victim. HENRONS, Dak., April 12.—B. Eddinger, another prairie fire victim, died in Valley township last night. The fire makes the sixth from the cause in Hyde county.

Snack Thieves. Thieves broke into the motorist's bedroom in his residence at 607 1/2 North Seventeenth street and stole an entire suit of clothes, including an overcoat.

Some thief snaked into the hallway of S. T. Peterson's home at 1206 North Twentieth street and here he snaked to a seal brown overcoat with a velvet collar.

George Grae, who lives at 1205 South Fifth street, complained at the police station yesterday afternoon that he had been robbed of a suit of clothes and \$12 in cash by some enterprising sneak thief.

Arresting Nabobs. Warrants have been issued for the arrest of Frank Murphy, Guy C. Barton, John E. Suther, W. W. Starnes, and W. A. Smith, of the horse railway company, for tearing up the pavements on Eleventh street near Mason, or at Mason near Tenth.

The leading jobbers of the grocery business of this state held a preliminary meeting yesterday, preparatory to attending the general convention of the Missouri valley job-

STORING FRANKLIN'S FLUID.

Inventions Which Will Do Away with Overhead Wires.

A large audience at the Y. M. C. A. concert hall last night took deep interest in the efforts of Mr. Harry A. Kinney, of Chicago, to explain by a lecture and demonstrations the sources, characteristics and appliances of the subtle power known as electricity.

The room was filled with electrical appliances to be used in making the demonstrations. Wall mottoes were fastened with gaily colored incandescent lamp photographs, fire alarms, annunciators, arc lights and electric cartridges were arranged for use in the experiments to be made. Mr. Kinney first showed the history of electricity, proceeding to show the manner in which it is applied in commercial and domestic uses. He first showed the strength of a current of electricity passed through a narrow air and, by darkening the room, gave a charming representation, in a frame on the wall, of the electric current. The heating power of the electric current was demonstrated by burning copper and steel wires in an arc lamp and by smelting copper and other ores in crucibles heated by electric current. He popped corn and ran a sewing machine at the rate of 5,000 stitches a minute, operated a phonograph, rang in fire alarms, fired cartridges and performed a number of other interesting experiments by the use of the same power.

Mr. Kinney next touched briefly upon the use of the latest addition to the long list of appliances that have been invented for the better use of electricity, and then proceeded to reveal the construction of the motor power now in use. The Pumpelly Storage Battery, for which Mr. Kinney is agent, is a contribution which promises to do away with overhead wires in the operation of electric motor railways, and to solve the problem of the electric trolley. The plates have been set vertically, with nothing between the positives and negatives, and thus have been freed from the danger of the jarring incident to the progress of a car wheel to fall in such a way as to connect the plates, and thus cause a short circuit and stoppage of the motor. The plates are held in place by a special device, which is so arranged that it will not be jarred loose by the jarring incident to the progress of a car wheel to fall in such a way as to connect the plates, and thus cause a short circuit and stoppage of the motor. The plates are held in place by a special device, which is so arranged that it will not be jarred loose by the jarring incident to the progress of a car wheel to fall in such a way as to connect the plates, and thus cause a short circuit and stoppage of the motor.

The plates are held in place by a special device, which is so arranged that it will not be jarred loose by the jarring incident to the progress of a car wheel to fall in such a way as to connect the plates, and thus cause a short circuit and stoppage of the motor.

Mr. Kinney is agent, is a contribution which promises to do away with overhead wires in the operation of electric motor railways, and to solve the problem of the electric trolley. The plates have been set vertically, with nothing between the positives and negatives, and thus have been freed from the danger of the jarring incident to the progress of a car wheel to fall in such a way as to connect the plates, and thus cause a short circuit and stoppage of the motor. The plates are held in place by a special device, which is so arranged that it will not be jarred loose by the jarring incident to the progress of a car wheel to fall in such a way as to connect the plates, and thus cause a short circuit and stoppage of the motor.
