

SEVENTIETH YEAR

CRUSHED BETWEEN TIMBERS.

One of M. Paster's Pupils Makes Several Marvellous Experiments. (Copyright 1890 by James Gordon Bennett.)

Ralph McCasland of Grand Island Meets With a Horrible Death.

THE ODDFELLOWS' PICNIC AT FREMONT.

A Wholesale Marriage of Indians Near Hancock—A Pontoon Bridge Attached at Nebraska City—State News.

Grand Island, Neb., August 21.—[Special Telegram to THE BEE.]—A horrible and fatal accident occurred here today by which one man lost his life and another was seriously injured while at work on the sewerage connections. The pipes are laid at a depth of about sixteen feet, and on account of the sandy soil the sides have to be cribbed. The men were at work placing pipes when the cribbing gave way. Pat Giddins was caught but extricated himself, although badly bruised.

Ralph McCasland, about sixteen years of age, and a son of George McCasland, who has charge of the men, was caught between two timbers, across the chest and crushed to death.

It took two hours to reach the body, and an inquest is being held this evening. The mother of the dead boy has been lying very low for some weeks and it is feared that she will be unable to stand the shock.

Oddfellows Picnic at Fremont.

Fremont, Neb., August 21.—[Special Telegram to THE BEE.]—The thirty celebration of the Oddfellows of Omaha, Lincoln and Fremont, held here today, was a success. Unusually sweet weather made the Lincoln celebration much smaller than was anticipated, but the attendance from abroad was about two hundred and fifty. An excursion train of five coaches came up from Omaha over the Union Pacific. The Oddfellows of Fremont testified and gave all a most hearty reception. Many public and private buildings were decorated. The celebration was held in the city park, where dancing, general sociability and basket dinners constituted the programme.

A Wholesale Indian Marriage.

Hancock, Neb., August 21.—[Special Telegram to THE BEE.]—Sixty couples of Indians were married yesterday at the Wahpeton Indian reservation, about eighteen miles north of this place, by County Judge Woods of Pender. It was necessary that they should be married under the civil regulations of the United States to entitle them to the annuity from the government. The Wahpeton of the Winnebago and Omaha reservations will be paid off today and tomorrow.

A Pontoon Bridge Attached.

Nebraska City, Neb., August 21.—[Special Telegram to THE BEE.]—Stewart's pontoon bridge was this afternoon attached by the sheriff for a debt of \$500, held by the Nebraska City National bank.

Closing Day at Blair.

Blair, Neb., August 21.—[Special Telegram to THE BEE.]—The twelfth annual reunion of the Washington county veterans closed here today, with 236 enrolled. It is claimed to have been the best arranged, for recreation and entertainment, of any reunion of the kind. The attractions today consisted of marching, speaking, dancing, lawn tennis, baseball, etc.

At the election of officers this afternoon, Theodore Heiler was elected colonel; J. F. Curtis lieutenant colonel; and H. E. Mandorf major for the ensuing year. The time and place of holding the next reunion was left to the officers for selection.

Another Temporary Injunction.

Nebraska City, Neb., August 21.—[Special Telegram to THE BEE.]—The attorneys for the Chicago, Burlington and Quincy have secured another temporary injunction restraining Nebraska City from issuing the \$100,000 bonds voted on Tuesday to all in building a wagon bridge across the river. The petition claims that Nebraska City has already issued \$25,000 of such bonds in October, 1872, and that the city voted \$100,000 to the Nebraska City bridge company, and said company in turn sold its charter to the Burlington railroad, which has built the bridge and now claims the remainder of the unsold bonds of \$75,000.

Alliance Meeting at Alma.

Alma, Neb., August 21.—[Special Telegram to THE BEE.]—The alliance of this county held a meeting at the opera house today. Powers, candidate for governor, and McCasland, for congress, were the speakers. The addresses were of the usual order, praising the new platform and abusing the republican party and candidates. There was a large attendance. Tonight they are holding a grand rally.

Three Boys Arrested.

Fairbury, Neb., August 21.—[Special Telegram to THE BEE.]—Three youths named Black have been taken into custody at a camp meeting of the United Brethren of Plymouth in this county.

A QUESTION OF LEGALITY.

Serious Charges of Bribery Against Chicago Councilmen.

Chicago, August 21.—[Special Telegram to THE BEE.]—Lawyer Adolph Kraus filed an intervening petition today in the suit of A. M. Wright, president of the Chicago Rapid Transit company, against that company and the city of Chicago, in which Mr. Wright seeks to test the legality of the ordinance. Lawyer Kraus' petition asks that he be made a party defendant with the company and the city. He represents many property owners along West Randolph street and Ogden avenue, over which the West Side rapid transit company secured a franchise to build an elevated railway.

Sons of Veterans at St. Joseph.

St. Joseph, Mo., August 21.—The national encampment of the Sons of Veterans of the United States will be held in this city August 22-23. Every state and territory has arranged a procession to enter the city. Kansas will be here and John M. Thurston of Nebraska will make an address. Besides the convention there will be open competitive drills, military parade, etc.

A Big Hotel Fire.

WATERBURY, N. Y., August 21.—A special says the Thousand Islands Park hotel and cottages and stores burned early this morning. The loss was not less than \$1,000,000. The fire broke out in the kitchen of the hotel and destroyed twenty buildings before it was extinguished.

A Kentucky Lynching.

MEDWAY, Ky., August 21.—John Henderson, who murdered Gilbert Satterthwaite, a prominent white farmer, near here eight days ago, was taken from jail about 2 o'clock this morning by a mob and strung up to a tree on the edge of town. He confessed.

The German Miners' Congress.

BREITENBURG, August 21.—[Special Telegram to THE BEE.]—The German miners' congress will meet at Halle on September 15 and its sessions will continue to September 24.

TUBERCULOSIS.

One of M. Paster's Pupils Makes Several Marvellous Experiments. (Copyright 1890 by James Gordon Bennett.)

Paris, August 20.—[New York Herald Cable—Special to THE BEE.]—Dr. Grancher, one of the most distinguished of Mr. Paster's pupils, has previously announced in the French press before the Academy of Science a report of several experiments which, in conjunction with M. H. Martin, he has been making with a view to the discovery of a remedy for that fatal disease which has hitherto completely baffled medical science, "tuberculosis." The matter is one of such vital importance that the Herald correspondent called upon M. Grancher today to learn all there was to learn.

"We have reached in our experiments such a stage as justifies the hope that we shall sooner or later have at our disposal the means to effectively combat consumption," said Dr. Grancher modestly, "as yet, however, we are far from our ultimate goal—so much so in fact, that we should not have made our experiments had it not been for Prof. Koch's communication to the Berlin medical congress. The general idea will be remembered, and a paper stating that he had found a chemical which rendered guinea pigs impervious to tuberculosis. Coming from an unknown physician, this announcement would have probably passed unnoticed, but made by Prof. Koch, it was of capital importance. Mr. Koch stated he had been experimenting for a year past. We began our experiments five years ago, though that does not of course prove that we are any further advanced than he."

"Exactly what we have succeeded in doing is this: We have inoculated rabbits with bacilli tuberculosis in a quantity sufficient to make a fatal result a certainty; then, with our treatment, which of course we must keep secret until we are assured of its value, we have kept these rabbits alive from two hundred days, and an examination after death we have found the spleen small and liver healthy, without any trace of tubercular bacilli. Rabbits which we have inoculated with an exactly similar quantity of microbes, and which we have not treated, have within a few days of inoculation shown all symptoms of the injected disease."

"Two hundred days in the life of a rabbit would represent years in the existence of a man, you suggest. But we are not content with analogies; we want facts scientifically demonstrated beyond all possibility of controversy. On that account we have taken the precaution of injecting the maximum bacilli—injecting it, furthermore, into the veins of the ear, when it is certain to at once enter into the whole system. I say particularly stress upon this fact; each of our inoculations in this series of experiments was subject to the same conditions as the others. Having succeeded in keeping those rabbits which we treated after inoculation, active for periods ranging from one hundred and twenty-five to one hundred and thirty days, while rabbits not treated died twenty-three days after inoculation, we have proved the value of our treatment in so far as rabbits are concerned. We shall shortly experiment with monkeys, and if this test succeeds we shall be justified in experimenting upon human beings."

"Our experiments have yet another object, that of determining whether vaccination can be used as a preventive against tuberculosis. In other words, by vaccination we can render an object refractory to disease; this can be done we have also proved in respect to rabbits. This you see we have at least advanced a stage towards both the prevention and cure of tuberculosis. With reference to Prof. Koch's experiments," continued Dr. Grancher, who it may be said en passant, although quite a young man, speaks with the restraint and moderation of a gray-headed savant—"I may say that it is my opinion that his experiments have not been made on the same lines as ours. In fact, his test, having been made with guinea pigs, was not conclusive; and so much the better, for there is never too much of a good thing, and two cures for consumption are better than one."

THE WORLD'S FAIR SITE.

If the Bickering Continues, Congress May Intervene.

Chicago, August 21.—[Special Telegram to THE BEE.]—The American government is vigorously criticizing the world's fair directors. The Evening Journal joins in the chorus and today says: "There has been so much of a diversity of opinion and so many conflicting interests, which so far have prevented a decision being reached on the question of the fair site within the city limits, that it would not surprise a good many if congress, at present in session, was petitioned to so amend the act relating to the fair as to allow a site being chosen outside of the corporate limits. Such is the feeling among the directors that if matters do not soon reach a finish within the city limits, congress may be petitioned to amend the act to allow of a site being chosen outside."

NATIONAL BANK CIRCULATION.

The Bill on the Subject to Be Taken Up After the Tariff.

WASHINGTON, August 21.—[Special Telegram to THE BEE.]—Chairman Dorsay of the house committee on banking and currency said today that he had been assured by Senator Sherman that the senate would, immediately after the tariff bill is disposed of, take up the bill giving national bank circulation to the full par value of bonds deposited and requiring the banks to issue only a circulation of \$10,000,000. This bill is now pending in the senate and is expected to be taken from the speaker's desk and receive assent as a privileged business. Senator Paddock says his pure food bill will be substituted for the tariff bill, which is now before the house and being literally fought. Representatives from the cotton producing states feel that one of their grievances is the house committee's business. The manufacturers' committee had led the way and has been declared against them. More than a score of representatives have prepared themselves for this fight. Among them is Mr. Mason of Illinois, who will make an effort of his life for the compound. There will be some opposition from those who favor the house committee's banking bill, but the bulk of the representatives will be in favor of the tariff bill. The government bill has been declared against them. More than a score of representatives have prepared themselves for this fight. Among them is Mr. Mason of Illinois, who will make an effort of his life for the compound. There will be some opposition from those who favor the house committee's banking bill, but the bulk of the representatives will be in favor of the tariff bill.

The Steamer Dania Goes Ashore.

LONG BEACH, L. I., August 21.—The steamer Dania, of the Hamburg-American line, went ashore high tide last night. One of the boatsmen, from some unknown cause, was wrecked. A wrecking steamer has been sent to get her off.

Eight Thousand Miners Strike.

BREITENBURG, August 21.—Address from Mons state that 8,000 miners in the Sarthe district have struck. Socialist leaders are fomenting discontent among the men, and it is expected the movement will spread.

CONGRESSIONAL PROCEEDINGS.

The Pension Office Will Get an Increase in Its Clerical Force.

VERY LITTLE DONE WITH THE TARIFF.

The Bill Defining Land Considered by the House and Representative Mason Goes for the Packers.

WASHINGTON, August 21.—The senate this morning, after spending some time considering the Pomeroy resolution for prohibiting liquor selling or distilling in the senate wing of the capitol, took up the tariff bill. Nothing was said about the Quay order of business resolution, the debate on which began yesterday.

The pending question in the tariff bill was on Mr. McPherson's amendment to the paragraph referring to table knives, forks, steels, butter knives, etc., and imposes compound duties on the same, according to their classification. The amendment is a substitute for these duties a uniform rate of 35 per cent ad valorem.

The bill was temporarily laid aside and the conference report on the bill for an increase in the clerical force of the pension office was presented and agreed to.

Mr. Eaton presented a telegram from the members of the Grant monument association in New York protesting against the removal of Grant's remains to Washington.

The senate bill to authorize the construction of a bridge across the Mississippi river at some point between the mouth of the Illinois and the Missouri rivers was considered. The bill now goes to the president.

Consideration of the tariff bill was resumed and the pending amendment was considered. Mr. McPherson's amendment to the paragraph referring to files and raps by striking out the duties and classifying by lengths and inserting 25 per cent ad valorem.

House.

WASHINGTON, August 21.—In the house today Mr. Henderson of Illinois reported the river and harbor bill, asking non-concurrence in all the senate amendments and agreeing to the conference requested by the senate.

Mr. Keary of Iowa made the point of order that the amendments must be considered in committee of the whole.

Mr. Henderson thereupon withdrew the report, stating that he would make it tomorrow at once enter into the whole system. I say particularly stress upon this fact; each of our inoculations in this series of experiments was subject to the same conditions as the others. Having succeeded in keeping those rabbits which we treated after inoculation, active for periods ranging from one hundred and twenty-five to one hundred and thirty days, while rabbits not treated died twenty-three days after inoculation, we have proved the value of our treatment in so far as rabbits are concerned.

THE ASIATIC CHOLERA.

A London Sailor, Recently Arrived from India, Stricken. (Copyright 1890 by James Gordon Bennett.)

LONDON, August 21.—[New York Herald Cable—Special to THE BEE.]—At about 5 o'clock this afternoon I stood at the bedside of Robert Teigh, who has just pronounced by two London physicians to be stricken with the terrible Asiatic cholera. It was only by special favor, if favor it could be called, that this permission was granted me, nor did Dr. Haslett House, the surgeon who accompanied me, allow me to remain long enough for an extended interview. One fact I gathered from the sick man, which may account for the disease having made its appearance only after Teigh had been in London, he having been in his usual health during the long passage from Calcutta.

"Yes," answered Teigh to a question "I put on different clothes the day I landed here. The coat and trousers I bought in London, but some of the undergarments I had brought with me from India. No, I had not worn them on shipboard; I never had worn them. The handkerchief I put on Monday morning as I stepped ashore in Hong Kong." In view of this statement it is easily understood how cholera germs may be carried from India direct in sailor clothes even to break out when their infected garments are put on.

Teigh went on to say that he was feeling much better, and the doctor thinks that in a few days he will be out of danger. "Mind," he added, "later, possibly, I say will probably be out of danger, but there may come a relapse, which would carry him off like a shot. Asiatic cholera, you know, is a disease you can never exactly count on, and, by the way," he continued, "I think it is just as well you get out of this room. You are the only person, except the physicians, who has seen this man since he was brought here."

I took a farewell look at Teigh before withdrawing. He looked like a man who was feeling much better, and the doctor thinks that in a few days he will be out of danger. "Mind," he added, "later, possibly, I say will probably be out of danger, but there may come a relapse, which would carry him off like a shot. Asiatic cholera, you know, is a disease you can never exactly count on, and, by the way," he continued, "I think it is just as well you get out of this room. I took a farewell look at Teigh before withdrawing. He looked like a man who was feeling much better, and the doctor thinks that in a few days he will be out of danger. "Mind," he added, "later, possibly, I say will probably be out of danger, but there may come a relapse, which would carry him off like a shot. Asiatic cholera, you know, is a disease you can never exactly count on, and, by the way," he continued, "I think it is just as well you get out of this room. You are the only person, except the physicians, who has seen this man since he was brought here."
