FROST CANNOT INJURE CORN.

For This Reason, Nebraska's Product Will Be Unprecedented.

CHEERING REPORTS FROM ALL SECTIONS.

Fifty-four Counties Report a Corn Crop of Over One Hundred and Sixty Millions of Bushels.

The following reports show the condition of the corn crop in fifty-four counties of the state of Nebraska. They attest the fact that the cereal is beyond the reach of frost, and show also the acreage under cultivation and the estimated yield per acre, upon the most reliable of information. There are eighty-nine counties in the state, and those not heard from will materially increase the showing made below, which is 168,508,668 bushels, on an acreage of 3,448,035, in fortysix of the counties given. Some of the best counties in the state have not been heard from. They are counties in which it is known there is a large acreage, and in which the crops are reported to be in excellent condition The grand total for this year will not there fore fall far below 250,000,000 bushels, which is by far the largest yield of corn the state of Nebraska has ever enjoyed. The greatest yield thus far was in 1879, when the product in round numbers reached 170,000,000 bushels. Between this figure and the product of fewer than half the counties this year there is a difference of but 9,000,000 bushels.

ADAMS -There are in Adams county 102,790 acres of corn. The crop will average between thirty-four and thirty-seven bushels an acre. Some anxiety was felt a short time ago on account of a cold rain which threatened to retard the ripening of corn, but the last ten days of warm weather have settled all doubts as to the safety of the crop. The corn is of a very good quality, quite perfect and neavy.

BUILDE. The corn is out of danger of the frost; total acreage 105,000; average acreage ferty bushels per acre. The quality is first

Birraio At least 35 per cent of the corn crop is safe from frost, and the present indi-cations are that it will all be fully matured within the next few days. The hot, dry weather of the past week has practically put the corn out of danger. The acreage is esti-mated at 19,000 acres, which will average forty-five bushels per acre. The quality is first class. Farmers report that the cob is

small and the kernel deep.

BLAINE-Cora now nearly all out of the way of frost. By the 1st of October if no frost comes, our county will have the largest yield ever known here. The acreage is about 5,000, which will average thirty-five business

per acre of good sound quality.

Bust—Continued warm weather has placed the entire corn crop of Burt county beyond the danger of frost. The acreage is about 100,000 acres, average yield about forty bushels per acre. Quality of product is first class

Colrax-The corn crop is entirely safe from frost. The total acreage is about 60-000 acres. The average yield is not less than forty bushels per acre, and the quality is A

CEDAR—Millions of corn-leaf pennants floating from cornstalk flagstaffs proclaim Cedar county's conspicuous position in the procession of corn producing counties of Nebraska. With double the acreage of all other cereais, the kingly title of corn is undis-puted, where 59,545 acres of Indian grain are turning golden in the September sunshine. And in all these acres there are not over a score of fields which are not beyond Jack Frost's blightning influence. Even the very few fields that are not sufficiently ripened to resist a heavy frost would not be seriously injured but would make very good "cattle feed." The average yield per acre is variously estimated from fifty to seventy-five bushels, but will without doubt make a strong average of sixty bushels. The at-mospheric conditions of the past few weeks have been such that better ripening weather was never known and the result will be a

first class quality of corn.
Cherry-Two-third of the corn of this county is out of danger from frost. The other third will be if frost stays off another week. The total acreage is about 8,000. The average yield is about forty bushels to the scre. The quality is first class. CLAY—The warm weather of the past two

weeks has fully placed the corn crop out of the reach of frost unless in a few fields of exceedingly late planting. The total acreage for this county 118,641 acres. The average yield per acre is estimated at thirty to thirtylive bushels. As to the quality of the product there will be two classes, most of the early planting first and late planting second. Cass—We will have an immense corn crop.

A larger acreage than any previous year was

planted and notwithstanding the lateness of the season in which a large portion was planted, the exceptionally fine and not weather that has recently prevailed has com-pletely banished all fear of damage from frosts. The total acreage of corn this year comprises 117,605 acres, and the conservative estimate of the average yield is forty-five bushels to the acre. The quality of the corn is first class, in some parts of the county being exceptionally fine. Some of the ears exhibited at the fair last week measured thirteen inches in length and the grain was full and close.

Chase-All anxiety concerning damages to corn from frost is now past. The last ten days have been warm and dry and have ripened the corn very fast. The acreage as compared with last year will be about 10 per cent less. The best corn will yield sixty bushels per acre, while the want of proper cultivation in many instances, caused from lack of feed for teams last spring will reduce the average yield to thirty-five or forty bushels. The quality excels everything ever raised in this portion of the state and the exception of a few late fields poorly cul-tivated the quality will be first class.

Custre.—About 25 per cent of the corn crop is safe from frost and if frost holds off another week the entire crop will be safe. The acreage of the county is about 15 per cent in excess of last year's crop. Information received from reliable farmers places the average yield at forty bushels, while in some localities it will reach saventy bushels. some localities it will reach seventy bushels. The quality is No. 1. Ears are very large and well filled out, farmers having been very careful in selecting good seed and good

Dawes-Corn has been kept in the back-ground by the smaller cereals, and has not had the attention that it would have had if the farmers had been more certain of plenty of rain and the absence of early frosts. The of rain and the absence of early frosts. conditions have all been favorable this season and those who planted corn now rejoi over the fact. The corn raised has been mostly the variety known as "Pride of the North," as it matures very early and is very fine. An immediate frost would catch a good our corn, but the greater part is safe from frost. The yield is from thirty-five to fifty bushels per acre, and some fields will, perhaps, go sixty bushels or more. Corn is showing itself a success in northwestern No-braska this year and will be raised more ex-tensively next year.

DAKOTA - The corn coop in this county is now safe from frost. The acreage far exceeds that of previous years. Farmers who have commenced harvesting the crop report a larger yield than ever, every one farmer farmer reporting an average of eighty-three bushels per acre. The coneral average will

farmer reporting an average of eighty-three bushels per acre. The general average will be about fifty-five. The quality is superior to preceeding years and Dakota county will justly retain the honor of being "the banner corn county of Nebraska."

Dusny—The corn crop in this county is now safe from frost, with very few exceptions of very late sod corn. The weather for the past three weeks has been very warm and dry and quite favorable for curing the corn. The total acreage is 19,812. The average yield per acre will be between twenty-eight and thirty bushels. The quality of the product is first class and the best over known in this county.

n this county,
Dixon-The corn crop is spiendid. The staks are well filled with ears, which are large, full and well developed. It will be the most prolific yield experienced in three years. It is stated that the warm weather of the past week has secured the corn out of danger from frost and that the product will be all that was anticipated. It is predicted that the crop will average on bottom and about fifty bushels to the acre and on high fields about forty bushels per acre.

Dongs-The total acreage to corn is about \$0,000 acres. The crop is now entirely out of the way of frost. The yield will be about an 60,000 acres. The crop is now entirely out of the way of frost. The yield will be about an average for the past ten years. The hot

fields going sixty bushels.

DEUEL—About one-third of the corn crop is safe and the balance will be in ten days. The total acreage of corn is 5,000. The average yield is forty-five bushels per acre.

Some will be first class, but a great deal will FURNAS-The corn crop is safe from frost, with the exception of very few pieces on low bottoms. The total acreage is about 50,000. The estimated average yield is from forty to forty-five busuels. The quality of the pro-duct is the best ever known here. Ears are larger, better filled and matured than any

PRANKLIN—The corn is safe from frost. The total acreage is about 50,000. The quality first class, and the average yield fifty bushess

FILLMORE -All early corn is safe from any thing but hard frost, and 75 to 85 per cent of all corn is safe. The total acreage is 112,778. The average per acre is forty bushels. The crop will be nearly all No. 2 corn.

Gaor.—The corn crop of this county is per-

feetly secure from frost. The warm drying weather of the past few days has very per-ceptably ripened the corn, and the fields have the appearance of being ready for the corn knife or husking brigades. Much new corn has already been brought to market, for which an average of 40 cents per bushel is asked. The total acreage of corn is 157,281, as given by the assessor's returns. Since that report, however, was made, it is safe to infer that there were 2,719 acres of later corn planted, which will give a grand total total of 160,000 acres cultivated to corn this year. The average yield per acre will be close on to forty bushels, though there are numerous fields that will easily go seventy-five bushels to the acre, while fifty bushels to the acre would seem a fairer estimate. The fact that much corn was planted late, will bring the general average down to forty as given by the assessor's returns. Since will bring the general average down to forty bushels. The quality of corn raised in Gage county this year is invariably of a superior order. This fact is based on the almost universal absence of smut in the growing fields. Samples of corn shown at the county fair now in progress, are freely given a grade of No. 2, by corn experts. Corn is coming into this city (Beatrice), from all parts of the county, and the new corn is lovariably of a first-class order, and finds a

ready market at 40 cents.
Cospen—The corn crop is safe from frost. The acreage in round numbers is about 50,000 and the yield will average thirty-five to forty bushels per acre. The quality is

first class.
Gamman-The corn crop is superior to any before known. I'wo weeks ago our farmers were looking toward the heavens and praying that the frost might be stayed of only for a few days. Now the danger is past and a bountiful crop of the golden grain is assured. The acreage of this county is 10,000 and the average yield will be from forty to forty-five bushels. The quality will be first-class and with the present prospects of a better than average price we are looking towards the fierceness of the winter winds with immeasurably more complacency than

we did a year ago.

Haves—Ninety-five per cent of our corn is out of the way of frost. The area is 67,000 acres. The quality is first class. The average yield will be fifty bushels per acre. This is a most excellent corn crop in every respect, and taken with the large crop of small grain now being threshed puts our farmers in a more prosperous condition than

ever before. Holf-Corn is practically out of the way of frost. The acreage is much larger than it vas last year.

Howarn—The crop is safe from frost with-out a doubt. The acreage is 52,358. A con-servative estimate would make the average yield per acre forty bushels, but many farmers say they expect from fifty to seventy bushels per acre on their farms. The quality is first class.

HOOKER-Most of the corn is safe from

frost. Some late planting will require two weeks more. The acreage is from 1,200 to 1,500. The yield is about forty bushels per acre. Some pieces will go over that, but the average will not be greater. The quality will be good fair corn, probably not first class. The county is not adapted to corn as well as it is to small grain.

The season too short.

Hall.—The safety of the corn crop from frost in this county is assured. The total acreage, as near as can be ascertained is 44,-328 acres, which is much larger than it has ever been before. The average yield per acre will be between forty or fifty bushels. Many fields will produce a much larger yield, but the average will be cut down owing to crop on low ground being somewhat damaged by rains early in the season. The quality of the

HARLAN-All corn is safe from frost, Total acroage, 54,000; average yield per acre, forty bushels; quality, first class. HAMILTON-The warm weather of the past week has been highly advantageous to the corn crop, and fully 75 per cent of it is secure from frost, the remainder requiring probably ten days longer. The total area is 124,000 acres. The most reliable estimates of the yield place it from thirty to thirty-two bushels per acre. The quality of the ma-

tured crop is first class.

JEFFERSON—The area of cora in this county is 200,000 acres or about that amount. Quality is good and entirely beyond dange of frost. The average yield is estimated at forty bushels per acre. A large amount of winter wheat was sown during the month of September. More than double that of any previous year.

KEITH-There is no danger from the frost. The average will be fifty bushels to the acre, with a total acreage of 120,000. The quality s first class. LANCASTER-It is estimated that there are

185,200 acros of corn in Lancaster county this year. All the corn, even on the bottom lands, is now safe from frost. The quality of the cereal is first class, and the average per acre will be from fifty to fifty-five bushels per acre. Lour-Most of the corn is safe from frost

The average per acre is from thirty to fifty bushels. The quality is first class.

Lincoln-This county has the largest corn crop over known in this part of the state There are about 75,000 acres in this county which will yield on an average fifty bushels per acre. The quality will be first class. No frost yet and nearly the entire crop is now out of danger. If the weather continues this

week as it was last, no damage can be done the corn crop.

Мениск—Corn is out of the way of frost, In fact frost would do it good now. Competent judges place the yield for this county at 50,000 acres. It cannot be estimated from assessor's returns, as they are very incomplete. The quality is good.

Manison—The entire crop of corn is be-yond the reach of frost. The quality will be better than any crop since the mem—ble year of 1884. The average yield here will be not less than forty bushels per acre. NEMARIA—The corn crop is at present en-tirely safe from trost unless the latter is an exceptionally heavy one. It is impossible to give an exact estimate of the total acreage of corn in this county owing to the fact that the assessors last spring failed to make a full report. The acreage last year was 67,404 acres. It is not far from 70,000 acres this year. The average yield will be about fifty oushels per acre. The quality is first class in every respect, fine large cars, well filled. OTOE-The corn crop is now entirely safe from frost. The total acreage of the county is 144,000. The average yield per acre will be forty bushels. The quality is first class.

Polk.—It is generally considered that
there are but a very few pieces on the low grounds that are not comparatively safe from frost, and as near as can be figured there are

138,560 acres and that the average will be forty bushels to the acre. Some farmers say their corn will go from sixty to seventy-five bushels to the acre,

Pierce.—The corn is all safe from frost.
The total acreage is about 54,000. The average yield per acre will be forty bushels.
The quality of the corn is all first class.
PHELIPS—The continued hot weather of the last two weeks has ripened the corn crop so that it is out of danger of injury by frost. that it is out of danger of injury by frost. The area is 55,395 acres. The quality is arst class in every respect and the average yield will be fifty bushets.
PLATTE—The corn crop is safe from frost.

The acceage is 81,160 and the average yield will be fifty-two and one-half bushels per acre. RED WILLOW-The corn crop is generally safe from frost, although a few very late fields are yet liable to slight damage. The past week of hot weather has hastened the ripening very much and in a few more days all will be past danger. The total acreage of the county is greater than last year and will average fifty bashels per acre. A great many fields are estimated at seventy-five

weather of the past ten days has matured the corn very rapidly. It has developed some of the late corn so rapidly that a good deal of this will be light or "chaffy."

The quality of the greater part of the crop is first-class. The average in the county is estimated at thirty-five bushels, with many fields going sixty hyshels.

Stoux-White only a comparatively small acreage of corn has been planted this year, yet it exceeds that of any previous year, and the prospects are now bright for a fair crop of this ceneal. The acreage is 2,700, with an estimated average of thirty bushels. 'Quality is fair, and it is now believed to ut of danger of any serious damage by

frost.

SALINE—With very few exceptions the cornfields are out of danger. The total acreage is 128,000. It will average not less than forty-five bushels to the acre, and some fields will go over sixty. The quality is good.

SAUNDRIS—Two-thirds of the corn crop is safe. The acreage is 144,000. The average yield is astirated at thirty bushels per acre. yield is estimated at thirty bushels per acre SHERMAN—About nine-tenths of the corn crop is now safe from frost. The variety which is still liable to damage is the yellow which is still liable to damage is the yellow and white dent, but if the fine weather continues a week longer all corn will be safe. The estimated area is 18,000 acres and the average yield will be from forty to fifty bushels per acre, making a total yield of from 750,000 to 1,000,000 bushels. The quality of our corn is the best we ever had in this section of the country.

Section of the country.

SHERIDAN—The corn crop of Sheridan county is out of the way of danger from frost. The total acreage is something like IS,000 acres, and will area thirty-five bushels per acre. The quality is good.

Thomas—Corn is safe from frost. The total acreage of the county is 5,000. The average yield per acre will be thirty bushels. The quality is first class. VALLEY—The corn crop is safe from frost. The total acreage is 32,521. The average is forty bushels. The quality is good. The corn was late this season owing to the heavy rains. The early frost was a godsend, as it stopped the growth and allowed the corn to

WAYNE-As near as can be learned five sixths of the corn crop in this county is safe from frost. The average yield per acre will be fully forty bushels and is all of excellent quality. The corn crop is always good in Wayne county, but this is an exceptionally good year and the farmers are all feeling

mature. The season of warm, even hot and dry weather we are now getting has put the

crowning touch to the finest crop of corn ever raised in this section. Conservative farmers

think our crop will go over fifty bushels to

happy.
YORK-The corn is safe from frost. The total acreage is 150,771, about one-third larger than 1890. It will average from thirtyeight to forty bushels per acre. Some claim the average as high as forty-five and fifty. The quality is first class, the ears large and well filled

HARMLESS.

TO ASSIST NATURE IN REMOVING Poisons from the body is the great mission of SWIFT'S SPECIFIC. Microbi cannot exist in the blood when S.S.S. is properly taken, as it promptly forces them out, and cures the patient. It has relieved thousands in a few days who had suffered for years. MR. F. Z. NELSON, a prominent and

wealthy citizen of Fremont, Nebraska, suffered for years with SCROFULA, and Yard and Lawn Fences, also Farm, Stock, it continued to grow worse in spite of all Park and Cemetery Fences. The cheapest, treatment. Finally, Four Bottles of S.S.S. cured him. He writes: "Words are inadequate to express my most artistic and durable fence in the market. Manufacturers' agents for Archigratitude and favorable opinion of tectural Iron work of all kinds, and for the SWIFT'S SPECIFIC.
