A Lightning Toe Calk Scarpener.

Mr. J. H. E. Clark of the Carbon Coal company, has made application for a patent to protect a simple but ingenius devise that will be likely to revolutionize the horse shoeing business. It is a little machine for sharpening the toe and heel calks of horse shoes without removing the shoe from the foot. The machine clamps upon the shoe and the calks are quickly sharpened by a rapidly revolving milling mandril. The toe and heel calks on a sets of shoes can be given sharp points in a few minutes, and it will not be necessary to remove the shoes until they are worn out. The machine has been submitted to many horsemen and practical mechanics, and they not only declare it to be something ennew, but enthusiastically protirely nounce it the greatest aid to horsemen and shoers. Mr. Clark received advices from the patent office yesterday announcing that his patent would soon be issued, and he will make arrangements to put the machine on the market at once.

Harrison street,

Expecting a Lively Time. A meeting of the members of the First Baptist church is to be held next Saturday evening to take measures for settling the dif ficulties that are now threatening to tear the organization to pieces. Both sides assert that they are bound to win and but little can be told as to how the contest will end. It is stated that the church is about equally divided on the question whether Rev. L. A. Hall shall continue to be the pastor or not and the question will be decided on next Saturday night. A ballot is to be taken, the members stepping to the front of the church and depositing their votes in a La' as their

Walnut block and Wyoming coal, names are called out by the church clerk. An interesting question, and one which 16 Main. may bring the matter into the courts, is likely to spring at that time. The four members whose expulsion was the cause of the recent flare up, and whose readmission al-most caused a free-for all fight in the church a week ago last Wednesday evening, are to be present and will attempt to vote. The proceedings of the meeting held at that time, however, have not been entered upon the church records by the clerk, L. R. Joseph, who is one of Rev. Hali's supporters, so that their names will not be read. It is thought by some of the opposition that the two sides will be so evenly divided that it will be nectulked over and a committee of volunteers appointed to work at the polis on election essary to decide whether the four members day. It was decided to make the organiza were legally expelled in order to decide whether Mr. Hall is to stay or not. tion a permanent thing, and with this end in view a hall located centrally in the ward will In his sermon Sunday Rev. Hall made a number of rather uncomplimentary refer-ences to the members of the opposition party, be selected where meetings may be held from now on to the close of the presidential campaign. Another meeting will be held next Friday evening at which a report will in one of which he likened them to so many dogs and announced that he would not stay e heard from the in the same kennel with them; either they must get out or he would. He then said that secure a place of meeting. if he got out he would open up shop close at hand. It is understood that his supporters Think the Boys Were Murdered. Some time last November two boys, sons have promised him that if he is dropped have promised him that if he is dropped by the church his sympathizers will go with him to the number of seventy-five or 100 and of H. Shoemaker, the real estate man at 232 Harrison street, and Percival Allen, the sexton of Fairview cemetery, left their organize a church to run in opposition to the other one. On the other hand the opposition homes to see a little of the world and visit a brother of one of them living somehave given it out cold that if they have a majority at the meeting Saturday evening Rev. Hall will not occupy the pulpit Sunday where in Texas. Several weeks after leav-ing, one of the boys wrote back to his parents asking for the address of the Texas orother, morning, so that it is evident that some very decided change will take place in the affairs stating that they were in Texas but had for-gotten the name of the town where the brother lived. They failed to reach of the church in the near future.

T. Harris, commissioner of education, took the ground that with experienced superin-tendents beginners could be taken in and trained, and the schools could be successful at the same time. Other held that none but experienced teachers all the way through should be emplayed. HOW CAN I SECURE A PATENT Detailed Information Concerning, Laws and

Official Procedure.

FACTS FOR THE GUIDANCE OF INVENTORS The Facilities Afforded Patent Applicant

by The Bee Bureau-Prompt Service and Adequate Protection -Important Instructions.

To the inventor the all-important question presents itself: "How can I secure a patent?" and to this THE BEE BUREAU offers

the following explanation : Inventors as a class are not familiar with the laws under which the letters patent are granted, the forms and practice in the patent office at Washington, and the technical methods of preparing specifications and claims so as to properly protect their inventions against infringers, yet the value of the patent and even its validity depend largely upon the careful and expert pre paration of the case. Specifications must be

drawn to fully disclose the invention, to distinguish between what is new and what is old. The employment of counsel skilled in patent law is therefore usually a prerequisite to the proper prosecution of a case and a grant of a valuable patent. Many inventors suffer the loss of benefits

that should be derived from valuable inventions owing to insufficient protection by patents procured through incompetent or careless agents. For What Granted.

Under the laws of the United States let-

ters patent are granted to any person who has invented or discovered any new and useful art machine, manufacture or composition of matter, or has invented any new or useful improvement thereon.

Term of Patent.

A patent is granted for seventeen years during which time the owner has sole and exclusive right to make, use and sell the patented invention How to Proceed.

For economic reasons, before making ap-

plication to the patent office for a patent, the novelty and patentability of the invention should be ascertained, because, if the invention is not new or not patentable, an unneces-sary expense is incurred by fling an ap-plication on which a patent can never be

granted The first thing to be done is to find out whether or not the invention is new and patentable

For advice on this point it is necessary to send to THE BEE Bureau a rough or complete sketch or a photograph of the invention, to-gether with a brief description thereof, setting forth the object of the improvements the arrangement of the parts and the ad vantages attained. While a model is very seldom necessary, yet it is often of great as-sistance. The initer can be made of any cheap material, and will be returned if a re-

quest is made to that effect Upon receipt of the data mentioned suffi cient to erable the invention to be under stood, our counsel will at onceexamine there i.to, and will advise without charge what is the best course to pursue, and will expresan opinion, from their knowledge of the arts and patents already granted, as to the pat entability of the invention.

Special Search.

In this connection it is recommended that the best and safest course is to have a special the best and safest course is to have a special search made in the patent effice to ascertain whether or not the invention has been here-tofore patented. The advantage of such a search is that if no anticipating patent is discovered the application can be filed with a greater degree of certainty, whereas if the invention is found to be old all further expense is avoided. The cost of a search of this nature is \$5, and with the report of the result thereof the inventor

report of the result thereof the inventor will be furnished with copies of such patents, if any, as embrace his ideas. It is much better to have this search made in the outset before incurring any expense whstever regarding the application for patent.

If it is found that the invention is new and patentable the client is advised to proceed with the filing of an application for patent,

of a particular manufacture. The owner of every trade mark is entitled to register the same, no matter how long it has been in use. The life of the certificate of registration is thirty years and may be reuewed for a like period. The government fee, pavable on filing each application for registration of trade mark, is \$25. The Bureau's charge Is \$25.

Labels.

Labels of all kinds, designed to be attached to manufactured articles or to bottles, boxes, etc., containing them, have heretofore been received for registration at the patent office and a certificate issued accordingly. Under a very becent decision of the supreme court of the United States it is held that there is no authority in law for granting certificates of registration of labels which simply desig nate or describe the articles to which they are attached, and which have no value sent rated therefrom. A label to be entitled to registration must have by itself some value as a composition, at least as sorving some purpose other than as a mere designation or advertisement. Many now holding cer-tificates of registration of labels are totally without any protection whatever, Many registered labels comprise subject matter register-able as trade marks. Wherever this is so, or where by a slight change it can be made to come within the purview of the laws governing trade marks, registration should be sought under this head. The government fee in a label case is \$6, and the Bureau charge is \$25.

Copyrights

can be had for books, maps, engravings, photographs, paintings, pictures, etc. The photographs, paintings, pictures, etc. The total cost thereof is about \$6, including al fees. When the author or publisher of book wishes to copyright the same he should, before publication, send us a copy of the title page, or inform us as to what the same con-tains. We will then procure the necessary protection. Within ten days after publicition two copies of the best edition should be forwarded to us or direct to the librarian of congress. Failure to do this renders the copyright void, and a penalty of \$25 is incurred.

Interferences.

An interference is a judicial proceeding in stituted under the direction of the commis-sioner of patents to enable him to determine the question of priority of invention between rival claimants. The BEE BURGAU, recog-nizing the fact that extraordinary care and skill are requisite on the part of an attorney in charge of a case in interference, has at its command counsel prepared to conduct such proceedings from the very inception down to a final determination of the merits of the cause. Testimony will also be taken under our direction in any part of the United States. While no specific sum can be set down as applicable to all interference cases alike, yet the charge will always be as rea sonable as possible

Infringements.

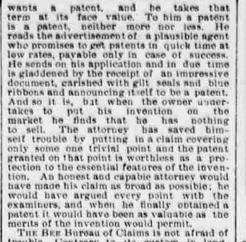

The question whether or not one patent infringes another is the very soul of all patent litigation. The questions involved are many, and of the most intricate nature. It is always a matter of such great import ance that no one should ever claim that an other is infringing on his rights, or, likewise, no attention should be paid to the claims of infringement by others, until the questioninvolved are carefully passed upon by reli able counsel. For such services the charge are always fair and reasonable. Foreign Patents.

In addition to the Bureau's facilities for attending to the interests of its invent patrons before the United States patent office and courts, it is also enabled to procur-patents for inventions in all countries of the world. in many of the foreign countries notably Canada, England and German patents for inventions previously patented i this country are looked upon with great favor and inventors are there very frequentl more likely to realize profits from their in ventions than they are even in this country The cost of foreign patents varies with differ-ent cases, but as a general rule the expense

of procuring paterts, covering all charges, is about as follows: Canada, \$50; England, \$90; Germany, \$90; France, \$55; Spain, \$50; Belgium, \$60. Ad-ditional information regarding the cost, etc., in any foreign country will be furnished by letter on application.

Important Warning.

It seems remarkable that in this enlightened age it becomes the duty of every reli-able and trustwortny attorney in patent mat ters to advise his clients to beware of the many sharks who set out with the apparent intention of defrauding inventors immedinouncement that the court will hold itsfina session in that city on the 17th of November ately after the issue of their natents. When tive promise that he long-voxed titles in th a patent appears in the Patent Official Ga-zette patentees are beset with innumerable

trouble. Contrary to its custom in land, Indian depredation and pension cases it does not take patent cases on contigent fees, and no other reputable patent attorneys do When an application is intrusted to it, it gives the subject careful and intelligent study, and then files an itemized claim covering as many points as can possibly be found in the invention. It argues as many of these as may be denied and in the end i secures a patent comprehensive enough to hold its own in the courts and in the money

If any inventor should be inclined to ques-tion the importance of broad claims in apply-NERVINE. ing for patents, he may prolitably consider the methods by which Alexander Graham Bell has been raised within the past fifteen years from poverty to a place in the financial world alongside of Jay Gould and Russell

THE INDIAN CLAIMS.

THE BEE BUREAU OF CLAIMS, in dealing with the claims arising under the Indian

market.

Sage.

depredations act, has been successful in pro tecting a large number of subscribers and others from extortion and loss. From complaints that have come to it, however, it ap pears that many of the claimants do not un derstand their position under the act. At At a time when there appeared to be little chance that congress would take up the claims or make any appropriation to pay them, they signed contracts with the Washington agents, promising from one-quarter to one-haif the amount to the agent in case the money should be collected. In view of this extortion con gress inserted a provision in the act annul-ing all contracts and limiting the agent's ommission to 15 or 20 per cent.

The claimants all probably understand that the agent's commission has been limited by the law, but many of them, according to their own statements, do not understand that they are free to do as they please about employing the agent they had first chosen. They con sider that they are still bound to employ the agent with whom they signed the exorbitant contracts whether they are satisfied with

him or not. It was the intention of congress to protect them at all points and they were left on the passage of the act free to do as they pleased and employ whom they pleased. Section 9 o the act stated : "That all sales, transfers or assignments of any such claims heretofore or hereafter made, except such as have occurred in the due administration of decedents' es tates, and all contracts heretofore made for fees and allowances to claimants' attorney

There could be no mistake about the meaning of this. All claimants had to make new the act, and they were at liberty to employ any one they pleased. If they were pleased with the zeal and acts of their first agent they might make their new contract with him. If they were dissatised they might

choose any other agent that they pleased. Those who have not signed new contracts since the passage of the act may profit by this to secure much better terms than they could otherwise get from the agents. The fact that THE BEE BUREAU is doing the work for the bare expense involved has had a good effect in moderating the charges of all agents to those who know how to protect them selves. For those who distrust their ability to cope with the claim agents on their own ground THE BEE BUREAU is always open.

and will then be requested to remit \$15 to cover the first government fee and \$5 in pay-And the light over the portcullis sputment of cost of drawing, when one is neces-sary. As soon as possible after the receipt of this remittance the speci-

fication of the invention will carefully prepared and forwarded to the inventor, together with forms for application for patent ready for execution. Upon eturn of the latter the case will be promptly iled in the patent office, and notice will be sent when action is had thereon, and also of the nature of such action.

Time Required.

The examining corps of the patent office is composed of thirty-two divisions, among which the applications are divided according to the official classification. The condition of the work in these various divisions varies from one to five months in arrears. Hence no specific time can be stated for the pendency of all cases. After an application for patent is granted six months are allowed in which to pay the final government fee, About three weeks after the payment of this final fee the patent will issue and be mailed

o the inventor.

The Bureau Charges.

Consistent with the spirit in which this Bureau was formed, it is proposed to do the work as near the actual cost as will protect the business from loss. Although counse are retained at heavy expense to the Bureau yet it is the wish to charge in ordinary cases only the minimum fee of \$25. However, in es requiring extra care, time and lab the fee will the fee will be proportionately increased but clients will always be advised in ad vance should such increase of fee be found necessary.

Design Patents.

A patent for a design is granted to any person who has invented, or produced any new and original design for the printing of woolen, silk, cotton or other fabrics; an new and original impression, ornament, pat tern, print or picture to be printed, painted cast or otherwise placed on or worked into any article of manufacture; or any new, useful and original shape or configuration o any article of manufacture, the same not having been known or used by others before his invention or production thereof, or patented or described in any printed publicaion. Patents for designs are granted the term of three and one-halt years, the government fee being \$10; or for seven years, the fee being \$15; or for fourteen years, the fee being \$20.

fee being \$30. The charge of the Bureau in such cases is usually \$25. Reissues.

A patent can be reissued whenever the same is inoperative or invalid by reason of a defective or insufficient specification, or by reason of the patentee claiming more than he had a right to claim as new, provided the error has risen by accident, mistake or inadvertence, or without fraudelent intent. The government fee for a refisue is \$30. The cost of drawing is \$5, and the Bureau charge is usually \$35. Great care must be exercised in reissuing a patent, becific very often what little validity there may be in a defective patent is entirely lost by procuring a reissue which is totally invalid.

Rejected Cases.

There are in the patent office a great many cases which stand rejected, but which should be allowed. This condition of the case may be due either to incompetency on the part of the attorney employed or his inability, be-cause of residence elsewhere than in Washington, to make the examiner see the inven ington, to make the examiner see the inven-tion in its true light; and then, again, as often occurs, cases are rejected on improper or insufficient grounds. When so requested we will have our counsel examine into any such case free of charge and advise as to the prospects for success by further prosecution. The client will also be then informed of the probable cost of competion. probable cost of completion.

Cavents.

By means of a caveat an inventor secures record evidence regarding his invention for the purpose of enabling him to complete or further experiment therewith. The life of a caveat is one year, and it may be renewed at the end of that time. The government fee is \$10 and the bureau charge is \$10.

Trade Marks. A trade mark is a fanciful or arbitrary de-vice or symbol used to distinguish the goods

while others offer to take an interest therein under promise of procuring foreign patents The sole object of these people is to obtain money from inventors, and they never make the slightest enceavor to carry out their groundless and worthless promises.

One of the schemes often resorted to by these sharks is to invite patentees to join a fictutious association, under the pretext that by paying the mombership fee the patented which does not exist, and that a salesman will travel over the country until the sale of the patent is effected, and this, it is needless to add, is nover accomplished.

Regarding Charges.

The Indian depredations patent, land mining and other claims before the courts The charges made by THE BEE BUREAU OF and departments are being pushed as rapidly CLAIMS for aervices in patent cases and thos as possible, with no delays on accunt of th of an analogous nature have been fixed al the lowest possible rate consistent with the large amount of business which has been sont to the bureau. The large amount of claims degree of skill and talent we have to employ intrusted to its care is a standing proof of the in the prosecution of these cases. Some attorneys might profess to secure pat esteem and confidence in which The Bre is held by the public which it serves. It is like ents at somewhat lower rates than ours, but wise a demonstration, if one was required, of we insist that the work cannot be done prop-erly for less than we charge. It is one thing the deed of such an organization. The revelations in regard to the Loomit to procure a patent, but it is guite another to obtain one which will embrace all the claims which the state of the art will permit. This agency which have been published recently go even further in the same direction. When a man sought for by the police for nearly a latter requires a high degree of skill, long experience, technical knowledge and specia year on a warrant for embezzlement can set up as a claim agent, flood the western counqualifications, which must be apparent to every intelligent inventor. It is our constant aim to procure a patent which will include ry with circulars and receive assignments for several million dollar's worth of claims t appears that there is little protection for every claim to which an inventor is entitled the claimant who sends to an unknown repreand also one that will stand a test in courts sentative. The men who assigned their claim to Loomis would have had small chance o as far as it is possible to do so. Inventors, who once intrust a case to the Bureau's care realize the force of these remarks. Models.

As hereinbefore mentioned, models are not required in the patent office except in in

who are not able to go to Washington and know no one there must hire their attorneys at haphazard, the need for a bureau to protricate or complicated cases. But at the same time, when an invention can be bette tect the people and do their work at reason able rates is apparent. The approval with which Tus Bas enter explained by a model it is well to send the same to us. A model should always be of a prise is received by journalists and public men is as gratifying as the response of the size not larger than one square foo sending the same by express the charges should be prepaid. public.

Any information not herein contained will be cheerfully furnished upon application, free of charge. BRE BUREAU OF CLAIMS, Address
