

PULSE OF WESTERN PROGRESS

Steady Development in the Black Hills Tin District.

HARNESSING THE POWER OF SHOSHONE

A Gigantic Project Undertaken in Idaho—A Fossil Fuel—Indian Lands Opened to Settlement—Summary of Northwest News.

Much has been written about the grand scenery of the Black Hills, and still volumes might be filled with descriptions of its beauties without exhausting one-half of the truth. If scenery were all the attraction it would be well worth all and more that can be said in praise. But when the great mineral wealth is considered we wonder why all these years have passed leaving the southern hills, filled with all the precious metals, almost untouched by man. For many years the country has been frequented by prospectors, who make a few holes in the ground here and there. But, though a great deal of money has been spent in the past year, no signs of real work have been shown in this particular district.

The Harney Tin Mining, Milling and Manufacturing company has been organized for some years and a great deal of western capital has been sunk in a poor class of machinery for the tin works. The men who have been in the head of affairs were not practical miners and did not understand how to accomplish the best results. For the past year the management has been under M. J. S. Childs, who is a practical miner. He has taken hold in a manner that cannot fail to bring success. He has a fine corps of men constantly at work. The mines are being worked in earnest and all the important ones have been sunk from 400 to 700 feet. All ore veins are easily traced and in many places can be followed for several hundred feet on the surface.

In the Addie mine the writer was taken down to the 200 foot level, where the vein was traced for over 600 feet without a sign of growing less. This mine has been sunk over 650 feet, and the new hoists are calculated to enable them to penetrate 2,000 feet, and at every 100 feet the vein is just as large and mainly defined as of the one described above. The work is being constantly pushed, and Mr. Rosseter, superintendent of the works, stated that from this mine alone, by working fifty men 400 tons of ore can be turned out every day.

The Addie, Etta, Cowboy, Coates and Gertie mines were all visited, and are being continuously worked with powder, drills, and complete outfits of hoisting and pump machinery. Staffs have been sunk and levelled as of the one described above. The work is being constantly pushed, and Mr. Rosseter, superintendent of the works, stated that from this mine alone, by working fifty men 400 tons of ore can be turned out every day.

main falls are lesser falls, which increase the total head to 250 feet. A correspondent of Electricity gives interesting details of the project of local capitalists to utilize Shoshone's power. The Shoshone Falls Electric and Irrigation company has obtained water rights on both sides of the falls and has already begun operations. "We know from personal inspection of the falls," says the writer, "that the problem of diverting the water from the falls to the wheels is a much simpler one than that presented at Niagara. No tunnels will be required, but a rock-cut channel tapping the river above the brink will within a few hundred yards carry the water to a suitable point whence it may be dropped over the cliff in iron pipes to the chasm below the falls where will be located the Pelton wheels and electric generating apparatus. The position of several small islands on either side of the water from the falls is such as to form natural wing dams, which will divert to the artificial channels all the water that can be utilized for many years to come, and to permit of an increase to almost any extent by artificial means, whenever such is required, with comparatively little outlay."

Obtaining power for mechanical purposes is really an insignificant part of the company's plans. The great object in view is to derive power and make it fructify the surrounding country. Vast stretches of which only require moisture to become agricultural garden spots. Thus the power of the falls will in turn elevate water to surrounding fields, and the water will be used for barren wastes. Experiments on sufficient scale have demonstrated the fertility of the irrigated soil, producing cereal and root crops in abundance and fruits to a limited extent. The writer shows that where the sluice is but forty feet high, in the expenditure of 5,500 horse power, sufficient water can be raised to irrigate 120,000 acres of land. In the way of revenue, the charges throughout the west for water power range from \$15 to \$40 per acre when the water is brought onto the land, and from \$2 to \$3 per acre a year. Figuring on \$15 per acre the revenue in sight will be \$1,800,000 for every 5,500 horse power expended with a yearly income of from \$240,000 to \$360,000, which will be perpetual. The company expect to be able to reclaim eventually several million acres of land. Multiplying this by two and three dollars will give the anticipated income to be derived from this source alone. It is evident that by establishing eleven units of this size the annual income from this source alone at \$3 per acre will be over 15 per cent on \$25,000,000.

This is not all. Wood River, one of the most important mining districts of the country, lies directly to the north and already consumes large amounts of power which at present is produced from wood and coal. It is intended to tap this market and furnish both power and light cheaper than they can be produced on the spot. The project is a gigantic one, and if carried out on the lines indicated will prove of incalculable benefit to Idaho.

A Fossil Forest. E. B. Schermhorn, geologist of Idaho's State fair bureau, who recently discovered the great fossils in Idaho county, has found a fossil forest in the center of Custer county. In the same locality he has discovered the petrified bones of an extinct race of men and animals, which will be sent to Chicago. The forest covers an area of four square miles, and the condition of the ground shows that at one time an enormous flow of clay, which worked in from the north-west, has buried the trunks of trees to a great depth. This clay has turned to stone, and no one can be certain of its true depth without going to great expense. All the trees in this forest have their tops broken off and stand from ten to twenty feet above the ground, averaging about twenty-eight to 30 inches. Schermhorn took the exact measurement of all the trunks of the trees and found them to average twelve feet in diameter on top and sixteen feet in diameter at the base. From the top of the trunk reached through the clay to the soil he had no means of ascertaining. A branch which had become detached from a tree, and was lying about fifteen feet from it, was three feet in diameter. From the trunk of a tree and their branches, Mr. Schermhorn thinks they are a species of redwood such as is found in California, and attributes their fossilization to the clay. This is a large part of mineral, and presumably coming from some volcano, soon turned the living trees into monuments of stone. Mr. Schermhorn discovered some fine specimens of fossil steam and iron, and is going into a section to prospect further for that metal. Among the specimens discovered from Lemhi and Custer counties are gold, silver, lead, copper, iron, tin, zinc and platinum used in fine electrical and surveying instruments. Antimony was also largely in the Seaford district of Custer county.

Ceded Indian Land. Land hunters and speculators are flocking to the Crow reserve land in Southern Montana recently opened to settlement in accordance with President Harrison's proclamation. The ceded lands comprising 1,800,000 acres constitute the western part of the reservation. Under the terms of the agreement the ceded lands except the mineral lands must be disposed of only to actual settlers under the provisions of the Homestead law, except section 2301 of the revised statutes. The ceded lands ex-soldiers and sailors the benefit of the time they served in the army or navy of the United States; provided, however, that the soldier shall before receiving a homestead be first honorably discharged. States for land taken by him and added to the fees provided by law and within five years from the date of the first original entry, the sum of \$1.50 per acre, one-half of which shall be paid within two years. It is further provided that any person otherwise qualified who has attempted, but for any cause failed to secure a title in the fee to a homestead under the existing law or who has made entry under what is known as the commuted provision of the homestead law shall be qualified to make homestead entry upon any of these ceded lands.

Registration of Voters in Montana. The registration of voters in Montana closed on the 15th inst., with a total of 42,000 on the rolls. In the populous centers almost the full voting strength is registered, but this is not true of the range counties. There are several localities in which a voter would have to ride or drive fully seventy miles to register, and many of them were unable to take the time to make the trip. As election day approached, politics are more and more lost sight of and attention is centered on the capital fight. This latter contest is narrowing down to Helena and Anaconda, though Butte, Great Falls and Bozeman will each get some votes. Helena was first in the field and has her campaign well organized, but Marcus Daly is credited with the intention of spending \$300,000 to capture the prize for his town Anaconda, and that sum of money may mean the surrender. Wherever such is required, with comparatively little outlay."

Utilizing Shoshone's Power. The question of harnessing the mighty power of Niagara Falls has passed from the domain of discussion to the threshold of practical operation. The advanced condition of the undertaking justifies the prediction that in less than a year a portion of the limitless power of man and turned to industrial uses. Hardly less important than Niagara are the great Shoshone Falls in Idaho. The volume of water is less, but the hydraulic head is greater, having a width of 900 feet and a sheer fall of 210 feet. But this is not all. Back of the

distributing booms in that vicinity, and considerable bad blood appears on the surface. The capital fight promises to be a bitter and costly one.

Salt Lake's Industries. Salt Lake City makes a splendid showing in the manufacturing statistics collected by the census office. The number of establishments was 169 in 1880, against 149 in 1880; the capital invested was \$2,038,576, against \$869,415 in 1880; hands employed, 13,977 in 1880 and 928 in 1880; wages paid, \$1,276,219 in 1880 and \$425,537 in 1880; cost of materials, \$1,665,877 in 1880 and \$812,736 in 1880; value of products, \$3,894,402 in 1880, against \$1,123 in 1880. The following classes of industry were omitted in the census reports of 1880; Millinery, custom work, women's dressmaking, custom work. The totals for 1880 above are increased as follows by the inclusion of the industries referred to: Number of establishments reported, 222; capital invested, \$222,180; number of hands employed, 71; wages paid, \$29,629; cost of materials used, \$35,415; miscellaneous expenses, \$10,506; value of product at works, \$110,860.

South Dakota's Assessment Roll. The State Board of Equalization has completed its labors and published the result. The assessed valuation of all property in 1891 was \$128,318,244.50, while for this year the total footing is \$127,377,096.53, a decrease of \$940,257.77. This, notwithstanding the fact that the material wealth of the state has increased considerably. The richest county in the state is Minnehaha, assessed at \$10,372,136.02. There are 7,703.71 miles of railroad in the state and 259,215 miles of telegraph and telephone lines.

Nebraska. Neigh townspeople and the Gates college folks have joined forces in the erection of a gymnasium. As Morris Record of Norfolk was pitching off a load of hay he fell and rolled to the ground. When picked up he was dead. Dismissed. The famous author of the ghost dance at Walker lake is now a prophet, without honor, in his neighborhood. "Sergeant Jim," a Bamcock Indian, says the prophet is "a blank big liar, and we good Indians will kill him if he doesn't keep still."

J. A. Bard last week sold to DeKalb and Waterman of Salt Lake an eighth interest in the Italian mine for 100,000 cash. The mine contains a streak that is usually rich in gold, while the remaining four feet in width goes from \$10 to \$50 to the ton. The expenses to the state resulting from the mining troubles in the Couer d'Alenes do not foot up nearly as much as was generally believed they would. The edition includes sketches of the road and amount is \$8,467.25. This includes all but the pay of men and transportation, but this will not bring the total up to more than \$29,000.

Utah and Montana. Registration in Salt Lake City is larger than ever before. Lewis and Clarke county, including Helena, shows a total registry of 5,500 voters. The printers union and the proprietors of the Ogden Post are warring in the courts. Recently discoveries of rich sapphire fields were reported in the vicinity of Craig, Mont.

By the close of the year Salt Lake will be an assured city, and the creation of public school buildings. The Montana officials have filed notice in the Bozeman land office that 22,386 acres of land will be reserved for school purposes. Two new railroads will be built into Helena. Trains will be running from Castle Rock a year ago, and the road to Dillon will be under way before that time.

The English Sapphire company has about sixty men at work on their ditch from the Prickly Pear creek across to their recently purchased placer grounds near Helena. The Butte Miner appears in a new fall suit of attractive cut and modern form, printed on a perfecting press. Besides being a vision of typographic loveliness, the Miner combines a vim and spriness which places it at the head of the newspaper procession in Montana. One of the largest real estate deals consummated in a long while in Helena has been perfected. The property sold is the Gilmore ranch about a mile and a half northeast of the city and Rosedale park, an aggregate of 305 acres. R. C. Collins represents the seller, and the syndicate, was the purchaser, the price being \$97,000, about one half of which has been paid.

Along the Coast. The state tax levy in Washington is 24 mills. The North Pacific lumber pool proposes an advance of \$3 per thousand. Nevada people have had their taxes raised 25 per cent, and just for the present. The silver issue has been lost sight of. As nearly as can be ascertained the irrigated lands of California comprise 3,500,000 acres. Irrigation has cost \$20,000,000, and it has increased the value of the land \$50,000,000.

Elk hunters are so insatiate in their greed for skins and skins that the extermination of this magnificent game in the forests of western Washington is a question of only a very short time. The Cabell mine, in eastern Oregon, has been sold to an English syndicate, the Wide West mine being purchased by the same parties. The Cabell mine was held at \$250,000 and the other at \$29,000. Returns from California orchards are now coming in, and some of the profits are astonishing. William Amesbury of Honolulu, Sonoma county, has sixteen acres of German pears, from 5 to 8 years old. He had this year 90,000 pounds of dried fruit, which he sold for \$8,000, making a net profit of \$7,500. An orange grove in Riverside, of ten acres

of mixed seeding and budding varieties, was sold last week for \$30,000. The trees are 14 years old, and some years the revenue is \$500 per acre. A meteor fell in San Francisco which is described by the man who saw it as being of a pale silvery color about the edges and a dark red in the center. As it fell very early Sunday morning it is quite likely that the description is born of the fact that Sunday closing in Frisco doesn't include Saturday night absence.

About 2,000 carloads per month of red cedar shingles are being shipped east from various Puget Sound points. The eastern market, instead of being overstocked, is hardly kept supplied, and the mills are increasing from every quarter. With the new rates to go into effect January 1, an equally big demand is expected for saved fir and cedar lumber.

Salty Was Reassured. New York Sun: After I had bunked down on the floor of the squatters' cabin and had been given about a quarter of an hour to go to sleep, I heard the woman ask her husband across the fireplace: "Jim, when he gets up in the mornin' will him ask for soap?" "Of course not," replied the man. "For towels?" "No." "Nor a comb for him's hair?" "No." "Reckon he will look for coffee and taters?" "Of course not."

"Nor fur sugar or butter?" "No." "Reckon he will eat pone and bacon and say a nuttin'?" "Sartin'."

"Jim, I wish we had towels, and soap and a comb for him, for he un," she continued after a bit.

"Sally, you purty thin blind, I reckon," he exclaimed in reply. "Can't you see he is a gentleman, and doan't you own sense figger it out that no gentleman ever uses such trash when he kin possibly dodge it?"

Precious Gems. It is a singular fact that the most precious gems are composed of the most common substances. The diamond is the purest form of carbon and is identical in composition with ordinary charcoal without the impurities of the latter. The ruby, on the other hand, is nearly pure alumina, a substance found in profusion in every clay bank. The scientific name for crystallized alumina is corundum, and the gems comprehended under this designation are some of the most valuable that diamonds of the same weight. The ruby, the sapphire, the oriental emerald, the oriental topaz, the oriental amethyst, the oriental aqua marina, the oriental chrysolite, the hyacinth and other precious stones are all alumina, the varieties of color being caused by inappreciable quantities of metallic oxides.

number of Sioux Indians are qualified to vote for the first time. The semi-monthly clean-up of the Golden Reward chlorination works amounted to \$35,000 in gold. Members of the Aborigine Press club presented a handsome gold-headed cane to Colonel John H. Drake, recently appointed to the consulate at Keul, Germany.

Pierre printing houses have won a victory in the courts over rival bidders in other towns for state printing. On an appeal to the supreme court a decision was rendered prohibiting the state printing commissioner from letting divided contracts on a given class of printing. The Pierre houses thus secure the plant of the land.

Boise Chinamen defy the Geary registration law. Idaho Falls has invested \$10,000 in a new school house. A law suit pending in the federal court at Boise involves \$225,000.

The Star group of mines at Hailey were recently sold to Arthur Stayner of Salt Lake for \$112,200. The three-stamp mill erected at the Chrysolite mine on Willow creek has been running for several days, crushing forty tons of gold ore per day. Men are prospecting on Little Boulder, near Shoup, for placer in the interest of a syndicate. They find the country rich in placer and have secured 600 acres of ground.

The War Eagle group, near Salmon City is showing up finely. A large amount of ore on the dump averages from \$20 to \$50 per ton. Concentrates run from \$700 to \$800. The great De Lamar mine of Owyhee county still keeps up as a great dividend-paying property. For the past six months it has been producing \$30,000. The ore bodies are very extensive, in fact no walls have been found. The famous author of the ghost dance at Walker lake is now a prophet, without honor, in his neighborhood. "Sergeant Jim," a Bamcock Indian, says the prophet is "a blank big liar, and we good Indians will kill him if he doesn't keep still."
