

WELL USE ICE NEXT SUMMER

Board of Health Declares There Will Be No Danger.

SOURCES OF OMAHA'S SUPPLY INSPECTED

Water and Ice Chemically Analyzed—Some Impurities but Not Enough to Do Harm—Recommendations of Dr. Somers.

At a meeting of the Board of Health yesterday afternoon Dr. Somers submitted his report of what his investigations had revealed as to the purity or impurity of the ice harvested by the different companies in the city.

I have caused eight analyses of water and nine of ice to be made, and my report based upon these examinations is as follows: I have analyzed all important questions regarding the ice supply and also the water supply.

There are two sources of ice contamination: First, from the impurities contained in the water itself before the process of freezing takes place, and second, from surface pollution being carried upon the ice after freezing has commenced.

Regarding the impurities from the water supply itself: The process of crystallization is a purifying process, and as a result of this process we obtain a fair quality of ice from a very poor quality of water.

The samples of ice taken from Cut-off lake were taken from the first, second and third crops from this source.

Regarding the impurities from the water supply itself: The process of crystallization is a purifying process, and as a result of this process we obtain a fair quality of ice from a very poor quality of water.
