FROM WINTER TO SPRING. It May Be Delightful But Often It Is Dangerous.

FROM WINTER TO SPRING. It May Be Delightful But Often It Is Dangerous. SOME OF THE PITFALLS. One of the Best Physicians in the Land Gives Some Timely Advice to Those Who Are Making the Change.

"Feel chilly, eh? Been out in the cold too much, your blood does not circulate freely, your system is run down. I thought so!" "Almost everybody is that way just now—inclined to be listlessly and discouraged—especially everybody in that way just as the change from winter to spring, and if you understand? There has been a bracing-up of the forces to meet the cold, there is a decided letting down now. Careful! If you do not watch that letting down, you will go down with it!"

The physician who made the above sensible and honest remarks, knew what he was talking about. There is great danger in the change from winter to spring; danger not to the head, not to the lungs, not to the stomach, but to the kidneys. You may not realize this, but it is true. Few people realize things until they are face to face with them.

If you have the slightest doubts of the truth of the above, you have only to see what the Safe Cure has done for others and you will find your doubts quickly disappearing. It has done, and it will do, what nothing has ever done before, and if you are a wise person you will be warned in time, and accept the hints which are above given.
