Two Counties Alone Have Produced Over \$40,000,000 in Placer Gold.

MEN OF CAPITAL AND BRAINS WANTED

Too Many "Jim Crow" Experts Airing Their Opinions for the Good of Mining Development - Derivation of the Name "Arizona"-Northwestern News.

"Southern Oregon is today the best goldmining region in the United States. Jackson and Josephine counties produced last year nearly \$1,000,000, and there is no reason on earth why the output should not be five or even ten times that amount this year," says an experienced miner in the columns of the Portland Oregonian. "These two counties contain more auriferous gravel of an accessible nature than any other known section of the mineral world. The country is not only supplied with what is called 'old channels,' but contains more ledges and ledge croppings than any other section of equal area in the world. During the past forty years these two counties have produced over \$40,-000,000 worth of placer gold, and yet the 135-foot tunnel has been cut in through source of that wealth is comparatively unbouthed. If this ground were located in South Africa or up around the North pole. where hardship or expense was incident, people would flock in there by the thousands, because it can be reached by a Pullman car it is looked upon with suspicion. I know of 20,000 acres of ground in these two counties that will prospect and pay from \$1,000to \$10,000 per acre, with water on it. And the beauty of the thing is that the water is there in abundance. All it requires is capi-tal to develop it. In proof of the assertion I make that southern Oregon is the best placer mining region in the world, I need only refer to the fact that C. W. Ayres of Siskiyou county, California, who is the min-ing commissioner from Oregon at the Midwinter fair, is securing his gravel for exhiwinter fair, is scuring his gravel for exhi-bition mining purposes from southern Ore-gon to work under a California banner. This is the old story of placing Oregon products under a California label. His mine is in California, but his pay dirt is in Oregon. Southern Oregon, in addition to having un-limited 'pay dirt,' has a debris outlet in the Rogue river which will never be hampered by legislation, such as the California miner has to contend with. One thing that has has to contend with. One thing that has retarded mining development in southern Oregon more than any other is its access-ibility and the hospitality of its people. It has been possible for the modern 'Jim Crow' mining expert to get in and out of the country and air his opinions without protest. We have had too many of these so-called experts already. What we want in that country is mon of capital and brains; men who would manage a mine as they would any mercantile enterprise, and to such men success is as certain as it would be in would any mercantile enterprise, and to such men success is as certain as it would be in a bank. I am confident that the time will come, in a few years at most, when single mines in southern Oregon will employ more men than any other single industry in the state. Every mine in southern Oregon today that is being worked under intelligent and honest direction is paying handsome returns on the outlay. Among those who have made a success of mining I might mention James and Vincent Cook, who clean up from \$10,000 to \$20,000 a scason; Captain Sturgis, with and Vincent Cook, who clean up from \$10,000 to \$20,000 a scason; Captain Sturgts, with \$20,000; John C. Lewis, cleaning up from \$1,500 to \$3,000 per week, with a two-stamp mill; Penumbra Kelly's mine, which has av-eraged \$6,000 a month for more than a year; the Wimer Bros.' mine, near Grant's Pass, from \$20,000 to \$100,000 per season; Simmons 6.00, 55 the sume place, about \$25,000. Fronts from \$20,000 to \$100,000 per season; Simmons & Co. of the same place, about \$25,000; Ennis & Cameron, on Rogue river, from \$20,000 to \$35,000 a season; Hull & Beck of Grant's Pass, from \$6,000 to \$10,000 a season; William Bybee, from \$5,000 up, and many others of lesser note. These mines are all paying well, simply because they are well managed. Be

MINES OF SOUTHERN OREGON Brown of this city has another nearly as large, while a Chicago company has just completed the largest pumping outfit in the world for the same purpose." BIG STRIKE IN THE EMMA G.

a ditch in Josephine county. Captain J. A. Brown of this city has another nearly as

There has been another big mining strike and, according to the news received, it is by all odds the greatest discovery ever made in this section of the west, says the Laramie Boomerang. The strike referred to has just been made

in the Emma G. mine, twenty miles west of Laramie. This lead was discovered last summer and there was a great rush to the location. The ore was very rich then, but, after sinking a short distance, the original discovery ran out and the vein was lost. Then they went down the hill and began a tunnel, expecting to strike the lead after going in. They have been at work . ere all winter, and the tunnel is now in 135 feet. It is at this distance that they encountered the lat-est strike. They have gone through the vein, which proves to be twenty feet wide, with perfect walls on either side. George Morgan and Thomas Morgan brought some of the ore from fourteen different places across the vein and this number of assays is being made at the university. J. H. Watkins made a test of the ore and secured a result of \$411 per ton of gold. All the ore is not so rich as this, but Tom Morgan, who is an experienced miner, says they have it sure, and plenty of it. The ore is supposed to run from \$40 to \$400 per ton. Some ore that they had been throwing on the dump and which was at one time considered worthless has been assayed and found to run from \$40 to \$53 per ton.

almost solid rock. The body of ore where they have struck it is about sixty feet from the surface. The walls are said to be as fine as ever seen. There is a clay-like substance between the ore and the walls on either side, and the rock falls away from the walls and leaves them as straight and smooth as possible. In a short distance further they will strike the chimney, from which they think the first discovery was made, and around this it is expected they will find some very rich

HOW ARIZONA WAS NAMED.

"The name 'Arizona' is from a beautiful old Aztec tradition, which teaches that the earth is the offspring of the sky; that long prior to the present race of men the earth was peopled by a race of giants, who in time died off, leaving the earth uninhabited," says ex-Governor Zulick of Arizona. "After a long time a celestial virgin, a child of one of the thirteen great dieties who rule all things, came down to the earth, and, being well pleased, remained for a long time its sole occupant. Once when in deep sleep a drop of dew from heaven fell upon her and she bore two children, a son and a daughter, from whom have sprung all the people of the earth. The name of this celestial virgin was Arizunna, 'the beautiful or son-beloved maiden.' As early as 1540 a Spanish expe lition visited Arizona and carried with back to Mexico wonderful accounts of the country. Other expeditions succeeded, and in 1560 a Spanish explorer and Jesuit fathers ountry. made a settlement at Tucson, this town now being the second oldest in the United States, being settled only five years after St. Augustine, Fla. The mission church of San Xavier del Bac is the pride of Arizona. It was commenced in 1768 on the site of one of the same name which had long been in decay and which is supposed to have been built about 1598. The present structure is a com mingling of the ancient Moorish and Byzan-tine styles of architecture, the outside being castellated and surrounded by a dome and two minarets. When inside the church the beholder is forcibly struck with the display of skill in its structure, its beauty and grandeur and the taste displayed in its adornment. The interior has the form of the Latin cross and the walls and ceilings are tastefully frescoed and decorated. Four large fresco paintings are executed with rare skill. The four evangelists in sculpture adorn the main altar and the scroll work is covered with gold leaf, which in its early days when fresh and bright must have presented a beautiful, grand and gorgeous sight to the wild Indians, who had never seen anything of like character. In former days there were large quantities of gold and sliver lesser note. These mines are all paying will, simply because they are well managed. Be-sides those already mentioned there are sev-eral large enterprises under way. John C. Lewis of Portland has 250 men at work on

remembered that this old, venerable and wonderful church was commenced 125 years ago in a wild Indian country, over half a century before Indianapolis was first settled, admiration must be accorded the great energy, perseverance and indomitable will of the old Jesuit and Franciscan fathers who planned, carried out and so successfully ac-

complished this great work. It is the only remaining edifice left by a former century and age. A RICH VEIN.

The strike made in the Banner tunnel a short time ago is proving to be the greatest that this county has known for many years, if ever, says the Anaconda Standard. This tunnel has been running nearly three years for the Banner mine, and is now in 3,000 feet. The vein that promises to be such a bonanza was discovered two or three weeks ago, and is one that does not show any ore to speak of on the surface. The find was entirely unexpected, and is a cross vein. Its course is northwest and southeast, while all of the mines in that country opened up

run in the contrary direction. The vein, which the tunnel is now following, is from five to eighteen inches wide, and the ore so rich that the truth would not be believed. The assays show it to go from 400 to 2,000 ounces per ton. This is much richer than the famous Banner, which milled all the way from 200 to 315 ounces

When the tunnel reaches the Banner the Elmira company will have two great mines opened up at depths of over 600 feet and will put on a large force of miners and start up the mill. When working the full quota of men more than 100 are kept in the mines. All of the lumber for the building of the South Africa mill is now on the ground and the work of erection has been resumed. Placer miners are waiting very anxiously for the season to open. The longer spring i delayed the shorter will be the season.

A DAMAGED DAM. The Cache La Poudre reservoir, two miles northeast of Timnath, suffered considerable damage from high winds. The drifting ice was forced against the head gate, crushing in the stone abutments of the dam and pushing the steel screw plates of the gate out of shape; also clogging the gates with drift ice so as to interfere with their work-

ng. The reservoir covers 480 acres of land, contains twenty-six feet of water and feeds No. 2 canal, under which is the best farming district in that section of Colorado, and if by this accident is should be necessary to by this accident is should be necessary to draw off the water to make the necessary repairs it would result in a loss to crops under the ditch amounting to between \$75,-000 and \$100,000. But the dam is being strengthened, and it is thought that with the assistance of a diver the debris can be cleared and the damage repaired without

entailing this loss. THIRTY MILES OF COAL FIELD.

Don Carlos Conant, a wealthy resident of the state of Sonora, Mex., is visiting his family in this city at their fine residence on Front and Elm streets, says the San Fran-cisco Chronicle. Having been born and raised in Sonora he is thoroughly familiar with the coal fields of that region, and spoke enthusiastically of their extent and quality. The coal fields are about 100 miles from Guaymas, where a large area has been and is now being prospected with diamond drills. The reports of the engineers on anthracite deposits formerly stated that they were near the surface, but not long ago while the own

ers of the Taramara silver mine were sinking to get under the old works they found at a depth of 430 feet a twelve-foot vein of the finest coal in the state, which subsequent prospecting with diamond drills indicates covers an area fully thirty miles in diameter Los Bronces being the center. The deposit, however, is at Las Barrancas. The best The San Marcial fields are the ones at first

eported, and they are extensive. A California company is now prospecting there. NEBRASKA. The O'Neill city council is figuring on the
